JNJ has grown earnings over the past 10 years at a rate of $4.8 \%$. The company managed to grow earnings before, during and after the last recession, showing that JNJ's products are in demand regardless of market conditions. Because of improving business performance and tax reform, JNJ forecasts that earnings per share will grow by 11\% in 2018. To create a margin of safety, 2023's expected EPS was arrived at by applying the company's historical growth rate (4.8\%) to 2018's earnings per share midpoint (\$8.10). This gives us an expected EPS of \$10.24 per share for 2023.

With 55 years of growth, JNJ has one of the most impressive dividend growth streaks available in the market. The average dividend increase over the past 10 years is $7.4 \%$. Based off of the current annualized dividend, investors could see the dividend become $\$ 4.80$ per share by 2023. At these estimates, the company would be paying out just $46.9 \%$ of earnings in the form of dividends. This would allow the company to potentially offer higher dividend growth in future years. Note: JNJ usually raises its dividend at the end of April, so the 2018 DPS is based off of the current quarterly rate of $\$ 0.84$ per share.

JNJ's multiple compressed during the last recession, but rebounded to much higher levels a short time later. JNJ has an average price to earnings multiple of almost 15.8 per year over the past decade. Based off of the company's midpoint guidance for 2018 and the $4 / 8 / 2018$ closing price of $\$ 128, \mathrm{JNJ}$ 's stock is trading at a multiple of 15.8 . This means that shares are fairly valued compared to their historical P/E.
Shares of JNJ have often paid shareholders a generous dividend. The stock's current yield is above the S\&P 500's, but below the 10-year Treasury Bond. The company offers a combination of share price appreciation and dividend income.

Based on the company's ability to improve earnings in 2008 and 2009, JNJ can be considered a recession proof company. By having a diversified business model of drugs, devices and consumer products, JNJ is insulated to a certain degree from business slowdowns in any one division. Even in a recession, people will look to maintain their health, giving JNJ an advantage during tough economic conditions.
JNJ's has spent heavily on acquiring companies that fit with its business model. One such is example is the company's $\$ 30$ billion all cash purchase of Actelion, which closed on $6 / 16 / 2017$. Actelion brings to JNJ a line-up of high margin medicines for rare diseases and should be accretive to earnings this year.
Even with more than 5 decades of dividend growth, JNJ has a reasonably low dividend payout ratio. While the company will most likely announce a raise at the end of this month, JNJ has a payout ratio below $42 \%$ today. This gives JNJ ample room to raise its dividend. If EPS grows at a faster than historical rate, the dividend could grow at a much higher rate.

## Final Thoughts \& Recommendation

We are estimating expected total returns of $7.4 \%$ per year through 2023 for Johnson \& Johnson. This estimate is based off a combination of growth (4.8\%), dividends (2.6\%) and multiple mean revision (0\%). Given the company's leadership in the healthcare sector, dividend growth history and performance during the last recession, the stock is among the safest investments around. Our growth estimate is relatively conservative. Johnson \& Johnson is one of only 2 companies to receive a AAA rating from Standard \& Poor's (Microsoft is the other), which speaks to its safety.
