Overview & Current Events

Procter & Gamble is a consumer products giant that sells its products in more than 180 countries. It is 180 years old and generates 55% of its sales outside North America, with 35% of its sales in emerging regions. It has raised its dividend for 61 consecutive years and has paid uninterrupted dividends for *127 years in a row*.

Nevertheless, the stock has dramatically underperformed S&P in the last five years, as it has lost 2% while the index has rallied 65%. The main reason is the competition in the retail sector, which has become fiercer than ever. As consumers have become price-conscious, private-label products have gained market share. In addition, large retailers, such as Walmart and Target, exert great pressure on their suppliers for lower prices. Due to these headwinds, the gross and operating margins of Procter & Gamble have essentially remained flat for a whole decade, at 50% and 21%, respectively. In its last earnings report, in January, Procter & Gamble exceeded the analysts' estimates by 5% but only thanks to the recent tax reform. Consequently, as the market was hoping for some solid improvement in business performance, the stock plunged 3% on that day and has lost a total of 14% since then. The market is not excited by the "core growth" or "adjusted growth" of the company any more and requires solid reported growth to reward the stock. It is remarkable that the company has failed to meaningfully grow its sales for 6 consecutive years.

Growth on a Per-Share Basis

Year	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2023
EPS	\$3.64	\$3.58	\$3.53	\$3.93	\$3.85	\$4.05	\$4.22	\$4.02	\$3.67	\$3.92	\$4.20	\$5.36
DPS	\$1.45	\$1.64	\$1.80	\$1.97	\$2.14	\$2.29	\$2.45	\$2.59	\$2.66	\$2.70	\$2.76	\$3.06

Due to the heating competition, the earnings per share [EPS] have remained essentially flat in the last four years. Procter & Gamble has already expanded in almost every country in the world and has a market cap of \$199 billion. In an attempt to return to growth, the company has been going through a major transformation in recent years. It has sold an unprecedented number of low-margin, low-growth brands and has thus reduced its brand count by almost 2/3, from 170 to 65. In this way, the management will be able to focus solely on the most potent brands. After years of stagnation, these efforts finally seem to be bearing fruit, as the core earnings per share are expected by the management and the analysts to grow by about 7% this fiscal year, from \$3.92 to \$4.20.

The management has provided guidance for 2% buybacks per year, which is equal to the recent rate. Because the recent results are somewhat positive, we are forecasting earnings-per-share growth of 5% per year moving forward. It is important to keep in mind that management has yet to prove its ability to tackle the great challenges facing the company. Still, we are pleased by its recent capital allocation decisions. The company sold 2/3 of its brands and used most of the proceeds in buybacks and debt reduction. Hence it is reasonable to expect the EPS to grow 5% per year until 2023, from \$4.20 to \$5.36, mostly thanks to buybacks.

Valuation Analysis

Year	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	Now	2023
Avg. P/E	18.6	16.4	17.0	16.0	16.7	17.8	19.0	20.9	21.4	22.3	18.8	18.6
Avg. Yld.	2.1%	2.8%	3.0%	3.1%	3.3%	3.2%	3.1%	3.1%	3.4%	3.1%	3.5%	3.6%

The average 10-year P/E ratio of Procter & Gamble is 18.6. Therefore, as the stock is now trading at a P/E of 18.8, it is trading very close to its historical average. As it is reasonable to expect the stock to trade around its average P/E ratio in 2023, the stock is likely to incur a 0.2% average annualized multiple contraction in the next five years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2023
GP/A	29.3%	28.2%	32.0%	29.8%	30.7%	28.8%	24.5%	26.0%	25.5%	27.0%	28.0%	28.0%
Debt/A	51.7%	53.2%	52.3%	51.1%	52.0%	51.1%	52.0%	51.8%	54.9%	54.2%	53.5%	53.0%
Int. Cov.	11.7	11.6	16.9	19.0	19.2	25.6	23.3	24.4	35.1	46.7	50.0	60.0
Payout	39.7%	45.8%	51.0%	50.1%	55.6%	56.5%	58.1%	64.4%	72.5%	68.9%	66%	66%
Std. Dev.	31.0%	24.7%	13.5%	15.2%	13.5%	16.2%	11.7%	16.2%	14.2%	10.9%	12.0%	12.0%

Due to lack of earnings growth, the dividend payout ratio has significantly increased in the last decade. As a result, the company has drastically reduced its dividend growth rate in the last three years. Nevertheless, as the payout ratio is not extreme, the company can easily keep growing its dividend for years, albeit at the recent slow pace.

Procter & Gamble is markedly resistant to recessions, as its products are essential to consumers. To be sure, in the Great Recession, when most companies saw their earnings collapse, Procter & Gamble saw its EPS fall only 1.6% in 2009 and 1.4% in 2010. Whenever the next recession shows up, this stock is likely to outperform the market once again.

Final Thoughts & Recommendation

After several years of stagnation and dramatic underperformance vs. the S&P, Procter & Gamble is in the middle of a major transformation. Its first-half results are somewhat positive but the company has a long way to go to prove that its growth is sustainable. Therefore, investors can reasonably expect 5% annualized EPS growth for the next five years, mostly thanks to share repurchases. Given the 3.5% dividend and a mild 0.2% annualized P/E contraction, the stock is likely to offer a 8.3% average annual return over the next five years. We also note that it is remarkable that the dividend yield of the stock has risen to an almost 20-year high level, mostly thanks to the downtrend of the stock. Conservative, income-oriented investors will benefit – particularly on a risk-adjusted basis – by adding this high-quality dividend stock to their investment portfolios.
