Overview & Current Events

General Mills is a packaged food giant, with more than 100 brands and operations in more than 100 countries. It has a market cap of \$29 billion. Since it peaked almost three years ago, General Mills has dramatically underperformed the market, losing 35% versus a 33% gain for the S&P 500. The main reasons behind this are rising interest rates, the acquisition of Blue Buffalo and the poor business performance of the company.

General Mills has not cut its dividend for 118 consecutive years. However, now that interest rates are on the rise, the dividend of General Mills has become somewhat less attractive in our opinion. The stock has also been burdened by its takeover of Blue Buffalo, with the \$8 billion acquisition representing 28% of its market cap. Investors may be afraid that management does not see promising prospects in the core business of the company while the takeover may prove too large to assimilate. Also, growing health trends in packaged food have caused General Mills to stagnate.

In mid-March, General Mills reported (3/20/19) financial results for the third quarter of fiscal 2019. The company grew its sales 8% thanks to its acquisition of Blue Buffalo while its organic sales increased 1%. Adjusted gross margin expanded from 32.5% to 34.2% thanks to cost savings and benefits from the product mix, which were partly offset by higher input costs. The improved margin, which was a striking difference from the previous several quarters, resulted in a 6% increase in the adjusted earnings-per-share, as it more than offset the 47% increase in interest expense in the quarter due to the acquisition of Blue Buffalo.

Moreover, management improved its guidance for this fiscal year. It expects the sales in the Pet segment to accelerate rapidly in the running quarter, as the company will double its distribution and increase the BLUE product assortment in its channels. As a result, management expects 0%-1% earnings-per-share growth for the full fiscal year, which is much better than its previous guidance for 0%-3% decrease in earnings-per-share.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$1.99	\$2.30	\$2.48	\$2.56	\$2.69	\$2.83	\$2.86	\$2.92	\$3.08	\$3.11	\$3.13	\$3.63
DPS	\$0.86	\$0.96	\$1.12	\$1.22	\$1.32	\$1.55	\$1.67	\$1.78	\$1.92	\$1.96	\$1.96	\$2.08
Shares	656.0	656.5	644.8	648.5	640.8	612.3	598.7	596.8	576.9	593.0	605.0	600.0

General Mills has grown its earnings-per-share at a 5.1% average annual rate in the last decade. In recent years this has decelerated, with the company growing its earnings-per-share at a 2.9% average annual rate in the last five years. We continue to expect approximately 3.0% annual earnings-per share growth until 2024, mostly thanks to Blue Buffalo. For fiscal 2019 we raised our estimate by 2% due to the latest impressive earnings beat, which was the largest in more than five years, and the improved guidance of management.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	15.2	14.3	14.7	15.1	15.7	17.8	18.6	20.0	20.5	17.0	15.3	16.9
Avg. Yld.	2.9%	2.9%	3.1%	3.2%	3.1%	3.1%	3.1%	3.1%	3.0%	3.7%	4.1%	3.4%

General Mills (GIS)

Updated March 20th, 2019 by Aristofanis Papadatos

In our last research report, in December, we noted the attractive valuation of General Mills. Since then, the stock has rallied 20%, mostly thanks to expansion of its price-to-earnings ratio. The stock is now trading at a price-to-earnings ratio of 15.3, which is still lower than its 10-year average price-to-earnings ratio of 16.9. If General Mills were to recover to its average historical mark in the next five years, the security would enjoy a 2.0% annual tailwind in this period.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	43.2%	41.7%	45.2%	47.7%	49.1%	54.8%	58.4%	61.0%	62.3%	63.0%	62.6%	57.3%

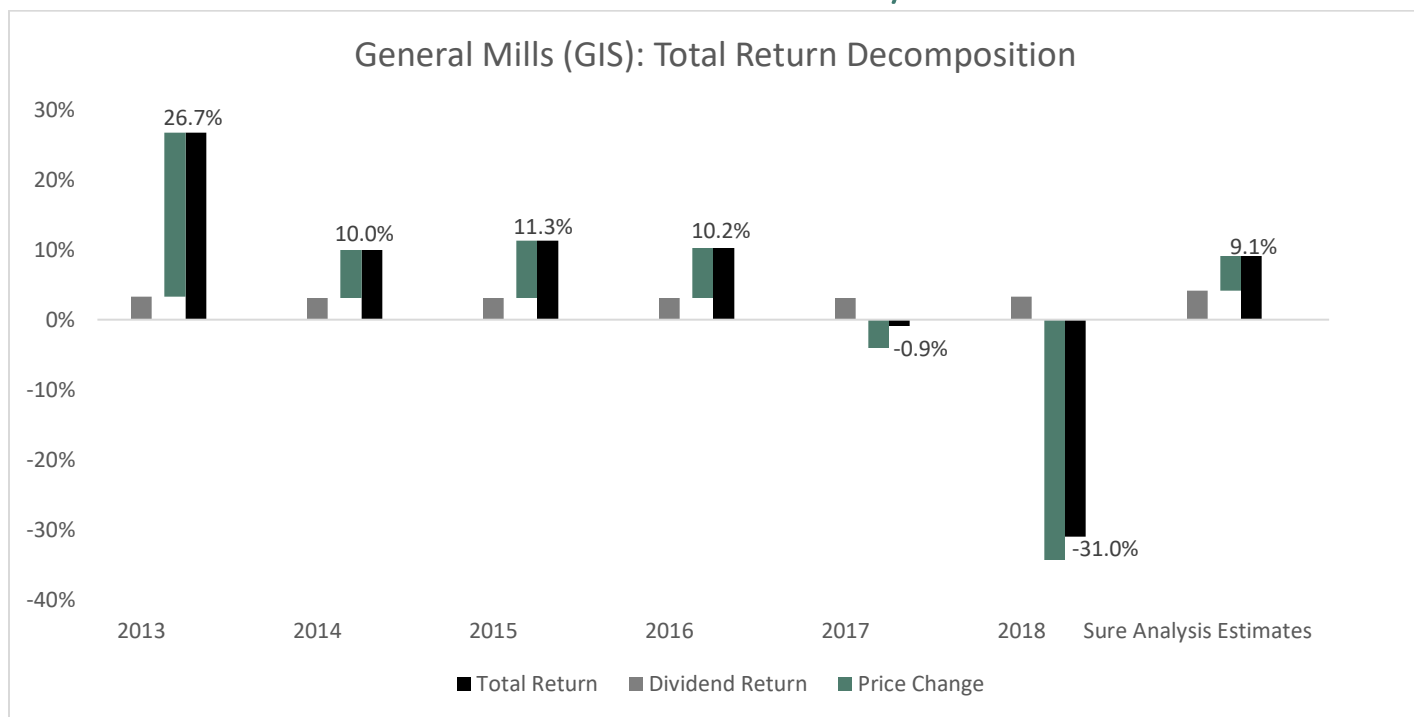

The strong brand name of General Mills provides some sort of competitive advantage but the fierce competition in its business, which has caused the company to stagnate in the last five years, indicates that this moat is narrow.

Due to the acquisition of Blue Buffalo, General Mills has frozen its dividend until it reduces its debt load to a more comfortable level. In the first nine months of this fiscal year, interest expense has jumped 68% due to this acquisition, from \$237 million to \$397 million. On the other hand, the stock has proved resilient during recessions and market sell-offs thanks to the strength of its brands. In the Great Recession, while most companies saw their earnings collapse, General Mills grew its earnings-per-share by more than 10% per year from 2007 to 2010. The company is likely to continue to outperform during future economic downturns.

Final Thoughts & Recommendation

Since our last research report, in which we offered a buy rating to General Mills, the stock has rallied 20%. Consequently, the stock has become less attractive. Nevertheless, it can still offer a 9.1% average annual return over the next five years thanks to 3.0% earnings-per-share growth, a 4.1% dividend and a 2.0% annualized expansion of its valuation level. As a result, the stock maintains its buy rating and remains suitable for investors looking for a high and reliable dividend yield.
