Overview & Current Events

American Express is a credit card company that operates the following business units: US Card Services, International Consumer and Network Services, Global Commercial Services, and Global Merchant Services. American Express was founded in 1850, is headquartered in New York, NY, and trades with a market capitalization of \$95 billion.

American Express reported its first quarter earnings results on April 18. The company generated revenues of \$10.4 billion during Q1, which was 6.6% more than the previous year's quarter. Management states that growth was broad based and well-balanced across spend, lend, and fee revenues, reflecting the benefits of American Express' integrated business model. American Express' provisions for credit losses were up 4% year over year, which was primarily due to the fact that its loan and receivables portfolio continued to grow.

American Express was able to grow its earnings-per-share to \$2.01 during the first quarter, which represents an 8% growth rate versus the first quarter of fiscal 2018. American Express' revenues were slightly lower than what the analyst community forecasted, but earnings-per-share beat the analyst consensus. American Express remained on its growth track during the first quarter of 2019, which positions the company well for another record profit during the current fiscal year, following 2018's already very strong earnings growth. American Express guides for earnings-per-share of \$7.85 to \$8.35 during fiscal 2019, which represents an earnings-per-share growth rate of 11% versus 2018 at the midpoint. The company also sees revenues growing by 8%-10% year over year.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$1.54	\$3.35	\$4.09	\$4.40	\$4.88	\$5.56	\$5.39	\$5.65	\$5.89	\$7.32	\$8.10	\$12.87
DPS	\$0.72	\$0.72	\$0.72	\$0.78	\$0.86	\$0.98	\$1.10	\$1.22	\$1.31	\$1.48	\$1.56	\$2.55
Shares	1171	1195	1184	1141	1089	1051	1003	935	886	859	835	750

American Express' profits declined during the last financial crisis, but over the last nine years its earnings-per-share still grew by an attractive 10.1% annually. In the 2014-2017 time frame its growth was muted, but the company experienced some restructuring and was impacted by the loss of its partnership with Costco that took place during that time frame.

After the Costco-related impact passed, American Express has gotten back to delivering solid organic growth. Billed business increases are the key factor for revenue growth for American Express, thus increased spending by card-holders is a good sign for American Express. During Q1 billed business growth remained at a solid level of 7%. American Express also was able to grow its total loans by 12% year over year during the first quarter of the current fiscal year.

American Express has been able to grow its expenses at a slower pace than its revenues, but we are unsure whether the company will be able to maintain that trend. With a weaker economy American Express might be forced to increase its sales and marketing expenses to grow its business, which is why net earnings growth could fall more in line with revenue growth, which will, likely, also slowdown from the current pace in the long run. Due to the impact of a strong pace of share repurchases, American Express will likely be able to produce attractive earnings growth nevertheless.

Fiscal 2018 included the positive impact of tax law changes, which is why earnings-per-share growth was outsized during that year. In 2019 and beyond, American Express will likely grow more in line with the long-term average.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	17.5	12.4	11.6	12.7	15.0	16.2	14.5	11.3	14.4	13.0	14.1	14.0
Avg. Yld.	2.7%	1.7%	1.5%	1.4%	1.2%	1.1%	1.4%	1.9%	1.5%	1.6%	1.4%	1.4%

American Express' shares have been valued at a low-to-mid-teens price to earnings multiple throughout most of the last decade, with it ranging from 11.6 to 17.5 during those ten years. We believe that shares would be fairly valued at a price to earnings multiple of 14, which would be in line with the historic valuation. Right now shares trade almost perfectly in line with our fair value estimate, which is why we don't forecast meaningful changes to its valuation.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	46.8%	21.5%	17.6%	17.7%	17.6%	17.6%	20.4%	21.6%	22.2%	20.2%	20.5%	19.8%

American Express' dividend payout ratio has been around 20% throughout most of the last decade, with 2009 being the sole outlier due to the below-average profitability during the financial crisis. Based on the low payout ratio American Express' dividend looks quite safe. Dividend growth will likely continue moving forward.

American Express' competition includes banks and peers such as Synchrony Financial. American Express' long history, strong brand, and the fact that it performed well during the last financial crisis, are all reasons for customers to stick with the company. American Express' earnings-per-share declined by ~40% between 2008 and 2009. Compared to other financial corporations, American Express was relatively stable during that crisis.

Final Thoughts & Recommendation

American Express is a high-quality company that produces consistent growth and that outperformed many of its peers during the last financial crisis. Its strong brand and global reach serve as competitive advantages. We believe that American Express will be able to produce solid earnings-per-share growth during the coming years, but multiple expansion will not be a tailwind from the current level. We rate American Express a buy due to strong projected growth, but American Express isn't for income investors, as its yield is only 1.4%.
