Dividend Risk Score:	A	Retirement Suitability Score:	A	Total Return Percentile:	40.7%

Overview & Current Events

Emerson Electric was founded in Missouri in 1890 and since that time, it has evolved through organic growth, as well as strategic acquisitions and divestitures, from a regional manufacturer of electric motors and fans into a \$41 billion diversified global leader in technology and engineering. Its global customer base affords it \$19 billion in annual revenue.

Emerson reported Q2 earnings on 5/7/19 and results were in line with expectations. Q2 revenue was up nicely at +8% as underlying sales rose 4%. The additional 4% was from a 6% gain from acquisitions, partially offset by a 2% decline from currency translation. The underlying sales gain was due to strength in North American air conditioning and global professional tool markets.

Gross margin came in at 42.1% of revenue, down 70bps against the comparable period last year. The decline resulted from unfavorable mix, as well as acquisition-related charges.

Operating margins fell 260bps in Q2 to 21% on a headline basis, and excluding the company's recent Tools & Test acquisition, margins fell 150bps to 22.1% of revenue. Management was quick to point out that margins improved sequentially from Q1 and that further improvement is expected in the back half of the current fiscal year. Gains are expected thanks to the easing of material cost pressures, as well as lapping tariffs that were enacted in July of last year. Finally, Emerson continues to try to reduce operating costs where possible.

Operating cash flow increased 7% in Q2, up to \$533 million, while free cash flow rose 3% to \$414 million. Earnings-per-share came in at \$0.84, up 11% compared to last year's Q1.

Emerson reduced the high end of its prior guidance range by a nickel, so guidance now stands at \$3.60 to \$3.70. The reduction is due to lowered sales expectations and a slightly higher tax rate. We've updated our estimate from \$3.68 to \$3.65 as a result.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$2.27	\$2.60	\$3.24	\$2.67	\$3.54	\$3.75	\$3.17	\$2.46	\$2.54	\$3.46	\$3.65	\$4.66
DPS	\$1.33	\$1.34	\$1.38	\$1.60	\$1.66	\$1.72	\$1.88	\$1.90	\$1.92	\$1.94	\$1.96	\$2.15
Shares	752	753	739	724	707	697	655	643	642	641	640	635

The majority of Emerson's revenue is exposed to the oil and gas industry, where revenue and margins change significantly, introducing risk to forecasts. That said, we are expecting 5% annual growth as the company's low single digit organic growth is coupled with acquisitions to fuel top line expansion. Emerson's Q2 results were better than this forecast, but peaks and valleys in the company's results are not unusual. We still think low to mid-single digit growth in revenue and a small tailwind from the buyback will be the key drivers of earnings-per-share growth in the coming years. We are not upgrading our forecast after Q2 results.

The dividend is also expected to grow in the low single digits as recent years have seen Emerson focus more on acquisitions and share repurchases than growing the dividend. Growth rates will likely be unimpressive as the company continues to focus using its ample cash flow on acquisitions, not dividend growth.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	14.8	17.8	16.8	18.3	15.8	17.6	18.0	20.6	22.9	20.5	18.3	18.0
Avg. Yld.	3.9%	2.9%	2.5%	3.3%	3.0%	2.6%	3.3%	3.8%	3.3%	2.7%	2.9%	2.6%

Emerson's price-to-earnings ratio has risen markedly in the past few years despite the fact that its earnings have been volatile. However, recent weakness in the share price has caused the valuation to come back down to fair value. We are therefore forecasting minimal impact from the valuation in the coming years as Emerson is trading at fair value for the first time in a few years. We see the yield falling slightly over time to 2.6% from 2.9% as the share price outpaces gains in the payout, as has been the case for the past few years on average.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	58%	51%	42%	60%	46%	61%	60%	77%	75%	58%	54%	46%

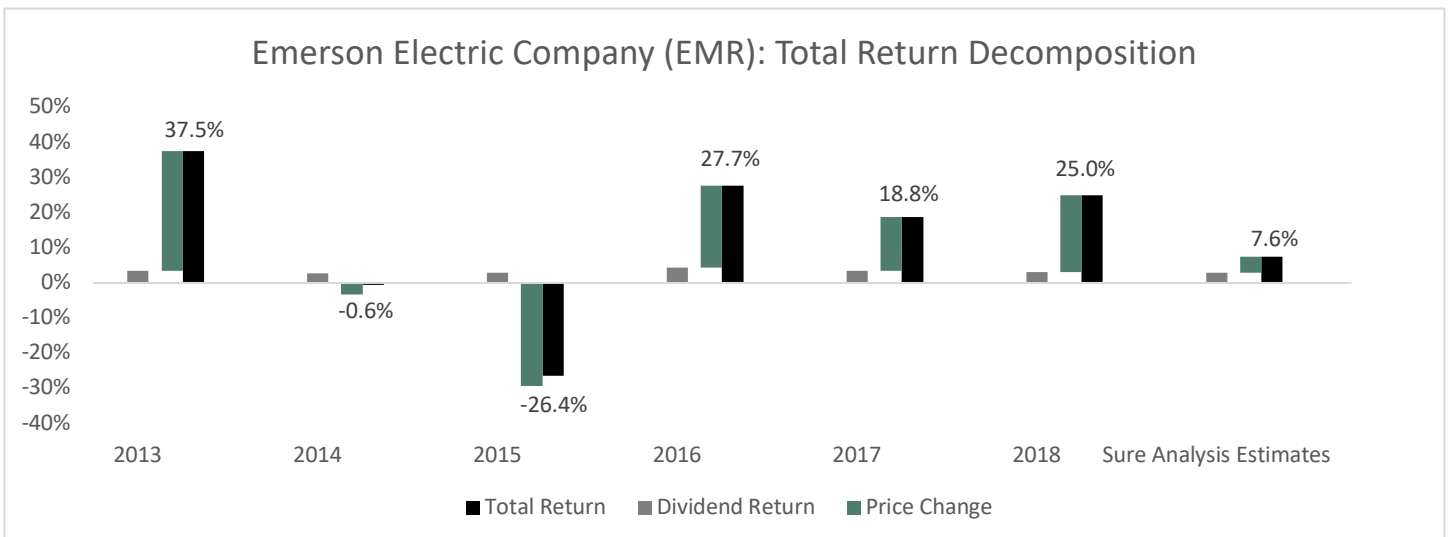

Emerson's payout ratio remains around half of earnings, and we believe it will continue to drift lower over time as Emerson focuses on acquisitions instead of boosting the payout by large amounts. The dividend is very safe as it is well covered by free cash flow, and the yield is strong, so it is certainly a suitable dividend stock.

Emerson's competitive advantage is in its many decades of experience in building customer relationships and engineering excellence. It has a global customer base that is seeing strong economic growth and that underlying sales tailwind should power results going forward. It is very susceptible to recessions given its oil and gas exposure, however, so any signs of economic weakness should put investors on alert.

Final Thoughts & Recommendation

With the stock back at fair value, Emerson could deliver 7.6% total returns going forward. This will be comprised of the 2.9% current yield, earnings-per-share growth of 5% and a -0.3% impact from the valuation. Emerson is finally trading at fair value again and while the stock doesn't offer much for value investors, it would be suitable for those seeking a strong current yield. We're reiterating Emerson at a hold for this update after Q2 results that included a modest guidance reduction.
