Overview & Current Events

Morningstar was founded in 1984 as a way for investors to seek information about hundreds of popular mutual funds that was out of reach prior to the company's Sourcebook product. Since that time Morningstar has grown tremendously, serving about 9 million clients today. It has about \$1 billion in annual revenue and a market capitalization of \$5.7 billion.

Morningstar reported Q1 earnings on 4/24/19 and results were strong, as expected. Revenue was \$259 million, up 6.3% compared to the same period last year. Without the impact of currency translation, revenue would have risen 8.3%.

License-based revenue was up 9.5%, driven once again by strong demand for PitchBook, Morningstar Data, and Morningstar Direct.

Asset-based revenue fell 3.7% year-over-year despite the strong rally in the equity markets during the quarter. Average assets under management were flat year-over-year but advisors favored offering lower-fee strategies. Offsetting this somewhat, the company's indexes demonstrated positive performance.

Transaction-based revenue was up 2.8% in Q1, driven by a strong performance from Morningstar Credit Ratings, which saw its revenue rise 26.7% thanks to 50 new issue ratings. A decline in advertising sales largely offset this increase.

Operating expenses were up 6.8% in Q1 due to higher salaries and benefits. This led to operating income of 4.2% in Q1 as operating margin fell from 19.5% to 19.1% year-over-year. Earnings-per-share came in at \$0.77 in Q1 against \$0.98 in the year-ago period. However, there are significant items impacting comparability.

Net income last year contained an \$0.18 gain from the sale of the company's board consulting services product line. In addition, this year's Q1 contained a \$0.06 decline in earnings-per-share due to one-time equity awards related to the company's PitchBook product. Given these items, we aren't concerned by the decline in earnings-per-share and reiterate our estimate of \$4.50 for this year.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$1.66	\$1.70	\$1.92	\$2.10	\$2.66	\$2.54	\$3.00	\$3.72	\$2.88	\$4.25	\$4.50	\$6.02
DPS	---	\$0.05	\$0.25	\$0.53	\$0.38	\$0.70	\$0.79	\$0.88	\$0.92	\$1.00	\$1.12	\$1.60
Shares	50	50	50	46	45	44	43	43	43	43	43	43

Morningstar's earnings-per-share history is very strong considering the wide array of economic conditions that have existed in the past decade. The company saw a small dip in earnings at the height of the crisis in 2009 and there have been a couple of other small blips, but it has managed an average growth rate of 6%. We see this level of growth continuing moving forward, and are therefore forecasting 6% earnings-per-share growth for the coming years.

One-time gains related to tax reform won't be present beginning this year so growth should normalize in 2019 and beyond. Still, we think low to mid-single digit revenue growth and a bit of further margin growth potential make 6% earnings-per-share growth look feasible. This growth estimate is also dependent on the company's appetite for acquisitions moving forward. With that said, its long-term revenue and earnings growth includes many acquisitions over time, so we see this estimate as including some additional M&A that has not occurred yet. Morningstar's position in its

niche is well established and we see its future as very bright looking forward. It also continues to experience tremendous success with its PitchBook and other licensed products, which occurred once again in Q1.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	25.0	27.5	30.3	28.7	27.7	28.2	25.8	21.4	28.1	27.2	29.9	27.0
Avg. Yld.	---	0.1%	0.4%	0.9%	0.5%	1.0%	1.0%	1.1%	1.1%	0.9%	0.8%	1.0%

Morningstar's average price-to-earnings ratio has been very high in the past decade as its trough value was 21.4, set in 2016. Investors have always been willing to pay a premium for this stock and that is not going to change. Morningstar, and other businesses like it with lucrative subscription models, tend to receive premium valuations due to their high rates of recurring revenue and superior profitability. Morningstar's recent growth levels have supported a premium valuation and we believe it will persist for the foreseeable future. However, today's price-to-earnings ratio of 29.9 is still slightly in excess of our estimate of fair value, which we see as 27. That means the security could experience a 2% headwind to total returns as the valuation returns to more normalized levels. We see the yield as remaining around where it is today as the dividend keeps pace with earnings; Morningstar is not an income stock.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	---	3%	10%	25%	14%	27%	25%	24%	32%	24%	25%	27%

The payout ratio is not likely to crest 30% anytime soon, barring a major shift in capital allocation strategy, so we see the yield as staying around 1% for the foreseeable future. Certainly, management has been more interested in investing for future growth, and that strategy isn't going to change anytime soon.

Morningstar's competitive advantage is in its very long operating history in a niche of the investment world it helped create. The company's subscription service, particularly with its PitchBook product, is a key differentiator and we see it powering future growth for many years to come.

Final Thoughts & Recommendation

Overall, we see Morningstar as a stock with a strong moat but also one that has had a major run, making it less compelling at present. That said, we are forecasting 4.8% total annual returns moving forward, consisting of the current 0.8% yield, 6% earnings-per-share growth and a 2% headwind from the valuation resetting. Morningstar's future is very bright, but given the low expected returns, we are reiterating at a hold rating.
