Overview & Current Events

NVIDIA Corporation is a specialized semiconductor company that designs and manufactures graphics processors, chipsets and related software products. Its products include processors that are specialized for gaming, design, artificial intelligence, data science and big data research, as well as chips designed for autonomous vehicles and robots. NVIDIA was founded in 1993, is headquartered in Santa Clara, CA, and is valued at \$87 billion.

NVIDIA reported its first quarter earnings results on May 16. The company generated revenues of \$2.22 billion during the quarter, which was 31% less than the revenues that NVIDIA generated during the previous year's quarter. This was a surprise to the upside, though, as the analyst community had forecast an even larger decline for the quarter. The revenue decline was the result of several factors, one of them being the decline in cryptocurrency mining. Lower prices for cryptocurrencies have led to lower demand for mining-specific chips, which has resulted in lower sales for NVIDIA. Other factors played a role as well, though, such as lower gaming chip sales, which declined by 39% year over year, while data center sales, which had been a growth driver in the past, were down slightly as well.

NVIDIA generated earnings-per-share of \$0.88 in the first quarter, which was easily ahead of what the analyst community had forecast. Due to the lower revenues compared to the previous year's quarter, coupled with negative operating leverage, it was not a surprise that earnings-per-share were down from \$2.05 year over year.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$0.40	\$0.65	\$0.94	\$0.90	\$0.74	\$1.12	\$1.08	\$2.57	\$4.82	\$6.64	\$5.30	\$10.66
DPS	---	---	---	\$0.08	\$0.31	\$0.34	\$0.40	\$0.49	\$0.57	\$0.61	\$0.64	\$1.15
Shares	568	589	616	625	594	552	539	585	606	625	630	670

In recent years, NVIDIA's growth exploded. Cryptocurrency mining was one contributing factor, but demand from miners is cyclical. During times when the prices of cryptocurrencies are lower, a lower amount of crypto-miners upgrade their GPUs. This was visible during recent quarters, when GPU sales were down from the previous year's levels.

NVIDIA discovered that its GPUs are very versatile in AI applications, which was an unintended benefit of the company's research and development efforts. The company has immediately started to capitalize on this trend by offering GPUs that are optimized for deep learning. These GPUs act as the brain of computers, robots, and self-driving cars. Those GPUs are utilized in professional visualization, data centers, and automobiles. The markets NVIDIA supplies GPUs for have strong growth rates, which bodes well for NVIDIA's long-term revenue outlook. Even without significant market share gains, the company should easily be able to capitalize on growing demand from gamers, professionals, and scientists. We don't believe that cryptocurrencies will be much of a growth driver going forward.

NVIDIA has been able to grow its profits a lot more quickly than its revenues, which can be explained by operating leverage and improving economics of scale. Going forward, this should help NVIDIA achieve above-average earnings growth rates as well. NVIDIA's forecasts see a total addressable market of \$50 billion in data centers alone by 2023, which, compared with the company's trailing revenues of less than \$12 billion across all businesses, shows that NVIDIA has a lot of room to grow its revenues as well as its earnings-per-share over the coming years.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	31.3	21.3	17.4	14.8	19.6	16.9	22.6	23.5	33.3	20.6	26.4	22.0
Avg. Yld.	---	---	---	0.6%	2.1%	1.8%	1.6%	0.8%	0.4%	0.5%	0.5%	0.5%

NVIDIA's valuation has risen substantially once the company's potential in datacenters, self-driving cars, and other growth areas became recognized by the market. NVIDIA's shares were valued at well above 30 times annual net profits in 2017, but have become a bit less expensive since. NVIDIA has tremendous growth potential, but we nevertheless believe that shares are overvalued at current prices, and that a fair earnings multiple would be in the low-20s range, compared to the high-20s price to earnings ratio shares are trading at right now.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	---	---	---	8.9%	41.9%	30.4%	37.0%	19.1%	11.8%	9.2%	12.1%	10.8%

NVIDIA started to pay a dividend in 2012. The payout ratio has been very low throughout the majority of the years since. This means that NVIDIA has a lot of room to grow its dividend, but so far NVIDIA's management seems focused on other things. The very low dividend yield, combined with a dividend growth rate that is not especially high, means that NVIDIA does not like an attractive pick for income-oriented investors.

All of NVIDIA's business units are cyclical. The gaming market is impacted by disposable income, demand from crypto miners is dependent on cryptocurrency prices, and demand from businesses is dependent on the state of the economy. NVIDIA nevertheless was able to remain profitable during the last financial crisis, though. In the gaming market NVIDIA is the producer with the best tech, and it was NVIDIA who essentially established the GPU-for-AI market. It is likely that NVIDIA will remain the market leader in these two important growth markets.

Final Thoughts & Recommendation

NVIDIA's first quarter earnings results were not strong, as the company is negatively impacted by the overall semiconductor market headwinds, as well as by headwinds from lower cryptocurrency miner demand. NVIDIA has a very positive long term growth outlook, though. We believe that shares are somewhat overvalued today, but the total return outlook remains positive. We rate NVIDIA's volatile stock a hold at the current price.
