Overview & Current Events

Sempra Energy (SRE) was founded 20 years ago and has grown into a \$36 billion market cap company. It serves one of the largest utility customer bases in the U.S., as it distributes natural gas and electricity in Southern California (over 20 million customers) and owns a majority stake in Texas-based Oncor, a transmission and distribution business (over 10 million customers). The company also owns and operates other utilities and merchant renewable energy projects, liquefied natural gas facilities, and gas pipes and storage in the U.S. and Latin America.

Sempra Energy benefits from two key trends, namely the transition towards cleaner energy resources and the advance of the U.S. as a global energy leader. In 2018, the company sold most of its non-core assets in order to better focus on its large core North American regulated utility, LNG export, and Mexican infrastructure (IEnova) assets as well as deleverage the balance sheet. Given the strong competitive advantages enjoyed by these core assets and the late stage in the economic cycle, we believe that these moves have made Sempra Energy more attractive.

In early May, Sempra Energy reported (5/7/19) financial results for the first quarter of fiscal 2019. Thanks to strong business momentum, the company grew its adjusted earnings-per-share 34%, from \$1.43 to \$1.92, and exceeded analysts' consensus by \$0.23. Sempra Energy has exceeded analysts' earnings-per-share estimates in 8 of the last 10 quarters. Management expects earnings-per-share of \$5.70-\$6.30 this year and \$6.70-\$7.50 in 2020. Thanks to strong performance, we have slightly raised our earnings-per-share forecast for this year, from \$6.00 to \$6.05.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$4.52	\$2.86	\$5.51	\$3.48	\$4.01	\$4.63	\$5.37	\$5.46	\$5.42	\$5.57	\$6.05	\$8.89
DPS	\$1.56	\$1.56	\$1.92	\$2.40	\$2.52	\$2.64	\$2.80	\$3.02	\$3.29	\$3.58	\$3.87	\$5.69
Shares	247	248	242	247	249	251	251	251	252	270	280	285

Sempra's enormous economies of scale and regulated monopolies in California and Texas should enable it to capitalize on any economic growth in those regions to drive long term growth. Texas in particular should see strong organic growth due to the population growth in the state. Additionally, Sempra's assets in Mexico enjoy a first mover advantage which should enable them to grow rapidly as Mexico begins to invest more seriously in its massively underdeveloped infrastructure. The LNG export portfolio should also see robust demand as the U.S. continues its transition into a global energy exporting giant. As a result, management has several expansion projects (in particular Cameron phase 2), which should contribute significantly to the company's cash flows. We believe that management's guidance for strong growth in 2019 is just the beginning of several years of rapid growth. We therefore assign an annual earnings-per-share growth estimate of 8% to shares over the next five years and expect the dividend to grow at the same pace.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	12.5	18.4	10.1	20.7	22.3	24.1	17.3	18.5	19.8	19.4	21.7	18.3
Avg. Yld.	2.8%	3.0%	3.4%	3.3%	2.8%	2.4%	3.0%	3.0%	3.1%	3.3%	3.0%	3.5%

Sempra Energy (SRE)

Updated May 30th, 2019 by Aristofanis Papadatos

Thanks to its strong business momentum, Sempra Energy is currently trading at a price-to-earnings ratio of 21.7, which is higher than its 10-year average of 18.3. Due to the high leverage of the company, we prefer to be somewhat conservative and assume that the stock will revert to its average valuation level in five years. If this occurs, the stock will incur a 3.4% annualized contraction of its price-to-earnings ratio.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	34.5%	54.5%	34.8%	69.0%	62.8%	57.0%	52.1%	55.3%	60.7%	64.3%	64.0%	64.0%

As a regulated utility in possession of dominant businesses in their respective regions, Sempra Energy possesses a clear moat around a significant portion of its earnings. At the same time, however, the regulated nature of its pricing prevents it from earning surplus profits. These businesses, as well as the stable, mission-critical nature of its infrastructure business in Mexico make it quite recession resistant. As proof of this, Sempra's earnings-per-share increased during the Great recession (2008 and 2009). However, its LNG export business and international exposure make it susceptible to commodity price, geopolitical, and currency exchange risks. Nevertheless, its high-quality assets, low payout ratio, stable cash flows and strong growth prospects make it a fairly low-risk investment. Moreover, while the company has a weak balance sheet and interest coverage ratio of only 2.5, it has reduced its leverage thanks to the sale of non-core assets.

Final Thoughts & Recommendation

Sempra Energy owns quality assets, many of which are in recession-resistant businesses. Its utilities businesses are dominant players in their fields and its LNG export and infrastructure businesses have strong growth prospects. Combined, they create a business that has both stable and defensive characteristics. As a result, Sempra Energy could offer investors a reasonable total return potential of 7.6% per year thanks to 8.0% annual EPS growth and its 3.0% dividend, which could be partly offset by a 3.4% annualized earnings multiple contraction. The security could be attractive for growth and income-oriented investors; however, we rate shares as a hold.
