Overview & Current Events

Xcel Energy's roots go back more than a century through three predecessor companies: Northern States Power, Southwestern Public Service Company and Public Service Company of Colorado. In 1997, Public Service Company of Colorado and Southwestern Public Service Company merged to become New Century Energies, and then in 2000 the company merged with Northern States Power to form Xcel Energy. The company operates in eight western and midwestern states in the United States. Xcel's revenue is obtained through two broad segments: regulated electric utilities (84% of total revenue) and regulated natural gas utilities (15% of total revenue). Since there is a large percentage of the company's revenue coming from regulated utilities this gives the company growth certainty and supports their healthy dividend. Xcel Energy is an industry leader in delivering renewable energy and in reducing carbon emissions. The \$30 billion market capitalization company is listed on the NASDAQ Stock Exchange under the ticker XEL. On May 9th, 2019 Xcel released Q1 results for the period ending March 31, 2019. Operating earnings for the quarter totaled \$3,141 million (\$6.11 per share) against \$2,951 million (\$5.81 per share) in Q1 of 2018. For the fiscal year 2018 operating earnings totaled \$11,537 million (\$22.44) against \$11,404 million (\$22.46) in 2017.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$1.49	\$1.56	\$1.72	\$1.85	\$1.91	\$2.03	\$2.10	\$2.21	\$2.30	\$2.47	\$2.59	\$3.12
DPS	\$0.97	\$1.00	\$1.03	\$1.07	\$1.11	\$1.20	\$1.28	\$1.36	\$1.44	\$1.52	\$1.59	\$1.93
Shares	457.5	482.3	486.5	488.0	498.0	505.7	507.5	507.2	507.8	514.0	517.0	521.5

Xcel Energy's earnings-per-share (EPS) rose relatively consistently throughout the last decade, with an average growth of around 5% per year. The last time Xcel has had negative growth with regards to their EPS was in 2004-2005 when they saw a 5.5% decline. During the last financial crisis, 2008-2009, Xcel was still able to grow their EPS despite a declining market.

Moving forward Xcel is focused on converting to renewable energy sources to supply power to customers. The company aims to be the industry's leading renewable energy provider. Xcel has plans in place to invest \$20 billion throughout 2019-23 mainly on renewable options and other environmentally friendly endeavors. Xcel has already begun a few projects in the last year, including a \$1.6 billion project in New Mexico and Texas on wind farms and a \$1 billion project on their Colorado Energy Plan to build more wind and solar plants in the region.

We expect growth from renewable energy sales and replacement of aging infrastructure to drive an average annual growth rate of 3.8% through the next half decade to 2024.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	12.7	14.1	14.2	14.8	15.0	15.4	16.5	18.5	20.2	18.9	21.5	16.0
Avg. Yld.	5.1%	4.5%	4.2%	3.9%	3.9%	3.8%	3.7%	3.3%	3.1%	3.3%	2.8%	3.8%

Xcel Energy (XEL)

Updated May 22nd, 2019 by Noah Horwood

Xcel Energy's price to earnings ratio has been steadily rising through the last decade, with just 2017-18 showing a decline. Comparing current P/E levels with the 10-year historical average of 16.0, it seems that Xcel is relatively overvalued at this point in time. We expect valuation multiple compression to reduce total returns by 5.7 percentage points annually over the next 5 years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	61%	59%	56%	54%	54%	55%	57%	61%	62%	62%	62%	62%

Xcel Energy's dividend appears safe. Dividend payouts have been steadily growing since 2003 and more recently, they raised their dividend by nearly 7% so far in 2019. The company issued its first dividend in March of 1980. Being primarily a regulated utility, revenue is protected by local regulators which gives Xcel growth certainty and protects their attractive dividend. The company also has been able to keep its payout ratio relatively close to 60% over the past decade; the payout is expected to remain just above 60% going forward.

To properly execute their high capital expenditure plans the company will need favorable regulatory, political, and public support. The company's multiyear rate plan in Minnesota expires in 2019; they have been operating in the Minnesota area for many years, so the company has a solid relationship with regulators. If the regulators lower the rate base lower than what Xcel can sell their services for, the company will have a hard time meeting growth projections going forward. The investments that Xcel Energy is making in renewable energy is in line with where regulations have been moving; the company has been trying to be an industry leader in reducing carbon emissions which should give them an upper hand with regulatory, political, and public support.

Due to the 2017 tax overhaul which made it easier for utilities to borrow money, most utility companies have been increasing their capital expenditures. Xcel Energy has been in line with others in the utilities industry. The company has increased capital expenditures by almost 19% from 2017-18. It is projected that their capex will increase by another 37% in 2019. Increases in capex have led to higher debt levels which have risen by almost 9% from 2017-18. This would become a corporate risk if interest rates begin to move significantly higher.

Final Thoughts & Recommendation

Xcel Energy has been performing very well lately, generating a return of over 18% in the last 12 months. The company has an attractive dividend and has been growing EPS very consistently over the last decade. Despite strong recent performance, shares are currently trading above their fair value and at a P/E ratio over their historic average. Overall, we expect annual total returns of just 0.9%. As a result, we rate Xcel Energy a sell at current prices.
