## Overview & Current Events

Axis Capital is a global insurer and reinsurer that was founded in 2001. It is split into Insurance and Reinsurance divisions, with the former making up about 55% of total revenue. It offers a broad range of risk transfer products for a diverse base of customers, and sports a market capitalization of \$4.9 billion with \$4.5 billion in annual revenue.

Axis reported Q3 earnings on October 29<sup>th</sup> and results were mixed as revenue performed decently, but catastrophe losses caused earnings to plummet. Gross premiums written decreased 1% to \$1.4 billion as the insurance segment was off 8%, but the reinsurance segment rose 13%. Net premiums written were down 7% as the insurance segment fell 14%, which was partially offset by a 7% increase in the reinsurance segment.

The company's accident loss ratio was 61.7% in Q3, compared to 61.2% in the year-ago period; a higher ratio means more of the company's premiums are lost to claims payouts. Catastrophe and weather-related losses nearly doubled from 7.5% to 14.1%, primarily attributable to Hurricane Dorian, typhoons in Japan, and other smaller events. This caused an 860bps deterioration in the combined accident loss ratio to 75.8%. This resulted in a major deterioration in profitability as the company's combined ratio, which is the sum of all costs divided by premiums, rose from 97.9% to 109.4%. A ratio in excess of 100% means the company spent more than it brought in, implying a loss.

Indeed, adjusted earnings-per-share came in at -\$0.34, and we've reduced this year's estimate to \$3.25.

## Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
<b>BV/S</b>	\$37.84	\$43.65	\$37.79	\$43.23	\$46.32	\$51.50	\$54.54	\$59.54	\$54.91	\$49.72	<b>\$56.26</b>	<b>\$71.80</b>
<b>EPS</b>	\$5.10	\$4.60	-\$0.90	\$3.41	\$5.49	\$5.32	\$4.02	\$4.48	-\$3.15	\$1.92	<b>\$3.25</b>	<b>\$6.64</b>
<b>DPS</b>	\$0.81	\$0.86	\$0.93	\$0.97	\$1.02	\$1.10	\$1.22	\$1.43	\$1.53	\$1.57	<b>\$1.60</b>	<b>\$2.04</b>
<b>Shares<sup>1</sup></b>	132	117	131	122	112	101	96	86	84	84	<b>84</b>	<b>83</b>

Earnings-per-share have been tremendously volatile for the past decade, which is expected for an insurer. Axis' profits rise and fall based upon how efficiently it writes premiums and factors that are out of its control, including claims, as we saw in Q3 once again. Axis has suffered of late due to higher claims from disasters, but this should not reoccur moving forward.

Axis also benefits from higher interest rates as its investment income rises commensurately. We see moderate growth going forward as Axis continues to grow its business organically through prudent risk taking, in addition to further acquisitions like Novae. We are expecting 5% earnings-per-share growth ahead through a combination of continued premium growth, investment income and buybacks. There is potential room for additional upside should Axis avoid years like 2017 in the future, or if it completes a sizable acquisition, but overall Axis looks well positioned for growth and in our view, continues to be well-managed.

We see the dividend growing at about the same rate as earnings, and should reach \$2.04 or so in the next five years.

## Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/B	71%	73%	85%	78%	95%	90%	99%	94%	113%	111%	<b>104%</b>	<b>91%</b>
Avg. Yld.	3.0%	2.7%	2.9%	2.9%	2.3%	2.4%	2.3%	2.6%	2.5%	2.9%	<b>2.7%</b>	<b>3.1%</b>

The company's price-to-book ratio has moved around significantly as its fortunes have risen and fallen, similar to other insurance companies' valuations. Axis continues to enjoy a price-to-book ratio that is well above average and as a result, we see it as overvalued. The stock is still about as expensive as it has been in recent years after Axis spent much of the last decade at meaningful discounts to book value. We therefore see a 2.6% headwind to total returns from the valuation going forward as the price-to-book ratio moves back in line with its historical averages, nearer to 90% from today's levels in excess of 100%.

As a result of a declining valuation, we see the dividend payment growing as a percentage of the share price, increasing from the current 2.7% to 3.1%. That yield would be a new high for Axis but given that its dividend is far more mature than it was several years ago, that is not entirely unexpected. The bottom line is that we expect Axis to remain a strong income stock but given the current overvaluation, there will likely be a better entry point in the future.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	16%	19%	N/A	28%	19%	21%	30%	32%	N/A	82%	<b>49%</b>	<b>31%</b>

Axis' payout ratio is only about one-third of operating earnings in normalized years, so we find the dividend to be reasonably safe. The yield is also attractive as it continues to move higher, and is now near 3%. Competitive advantages are tough to come by for insurers, and Axis is no different. On the bright side, recessions tend not to sway performance one way or the other, so there is a diversifying component to adding Axis to one's portfolio.

## Final Thoughts & Recommendation

We see Axis as overvalued and offering investors total annual returns of just 5.0% in the coming years. Axis' earnings-per-share growth of 5% will be somewhat offset by a headwind from the valuation, so half of its returns will result from the 2.7% yield. Axis simply does not offer high enough total returns to make it a buy. It's a borderline sell at current prices.
