Overview & Current Events

New York Community Bancorp is the parent of a state-chartered bank called New York Community Bank. The wholly-owned subsidiary operates 239 branches in New York, New Jersey, Ohio, Florida, and Arizona. The holding company was founded in 1993 but the banking operations of the company can be traced to 1859. The bank focuses on multi-family loans in New York City, particularly in buildings that are rent-controlled. That book of business is about three-quarters of its entire lending portfolio. The \$53 billion asset company has a market capitalization of \$5.6 billion.

New York Community Bancorp reported Q3 earnings on 10/30/19 and results were generally in line with expectations. The bank said it was seeing a positive impact on funding costs from lower short-term rates, and expects that tailwind to continue. In Q3, net interest margin, or NIM, was essentially flat with Q2.

Total loans were \$40.7 billion at the end of Q3, similar with Q2, and up 2% on an annualized basis since the end of 2018. New loan originations were \$2.3 billion, compared with \$3 billion in originations in Q2. Total deposits were \$31.6 billion at the end of the quarter, down -2% from Q2, but up 4% year-over-year.

Earnings-per-share came to \$0.19, equal with Q2. We're reiterating our estimate of \$0.78 for this year.

Moody's also cut its debt ratings for New York Community Bancorp from Baa2 to Baa3 as a result of the declining capital ratios of the bank. The declining capital position of the bank is due to the share repurchase program the company put into place late in 2018.

Growth on a Per-Share Basis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
EPS	\$1.13	\$1.24	\$1.09	\$1.13	\$1.08	\$1.09	-\$0.11	\$1.01	\$0.81	\$0.79	\$0.78	\$1.00
DPS	\$1.00	\$1.00	\$1.00	\$1.00	\$1.00	\$1.00	\$1.00	\$0.68	\$0.68	\$0.68	\$0.68	\$0.68
Shares¹	433	436	437	439	441	443	485	487	488	474	467	470

NYCB's growth prospects are somewhat murky. The bank's leverage to New York City with its multi-family loan portfolio makes its results more volatile than a diversified bank that has lots of different types of lending strategies. Recently, New York City passed stricter regulations that make it more difficult for landlords to raise rents on rent-controlled units, which is where NYCB is heavily leveraged. This could crimp the bank's customers' ability to improve properties over time and raise prices, which may cause some of them to lose the ability to service their loans. NYCB has been prudent in its underwriting standards, so risks are still somewhat low, but the possibility of lower growth because of this is noticeable.

On the bright side, NYCB's deposit mix is very strong for an environment where rates are moving around. About 40% of its deposits are in time deposits, so those rates are locked in until maturity. In addition, strong deposit growth should help NYCB pay down more expensive borrowings and improve margins, along with strong expense controls. In total, we see 5% earnings-per-share growth from today's relatively low level. We note that the bank's loan-to-deposit ratio is extremely high, meaning risks are higher, and the runway for additional growth is essentially nothing due to already-high leverage.

Valuation Analysis

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Now	2024
Avg. P/E	10.0	13.2	13.8	11.6	13.5	14.6	---	15.0	16.7	14.6	15.3	12.0
Avg. Yld.	8.9%	6.1%	6.7%	7.6%	6.8%	6.3%	5.8%	4.5%	5.0%	5.9%	5.7%	5.7%

We see fair value for NYCB at 12 times earnings based primarily upon peer valuations, which is down from 14. Today, the stock trades for 15.3 times our estimate of 2019 earnings-per-share, so it is meaningfully overvalued according to that metric. Should the multiple deflate, we see a -4.7% headwind to total annual returns. The yield, however, is likely the main draw for investors at 5.7%.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2024
Payout	88%	81%	92%	88%	93%	92%	---	67%	84%	86%	87%	68%

NYCB doesn't necessarily have a competitive advantage, as those are difficult to come by in banking. Indeed, we suggest that the bank's leverage to a narrow sliver of the New York City real estate market makes its results more volatile than most other banks' results, and is a disadvantage. On the other hand, the focus on these rent-controlled apartments should make its recession performance quite strong and indeed, during the Great Recession, NYCB continued to grow earnings. That is quite an attractive trait, and a rare one, for a bank.

The payout ratio is currently very high so we don't see any dividend growth anytime soon. We think NYCB may struggle a bit to pay its current payout of \$0.68 and thus raises aren't an option until earnings rebound significantly. The payout was cut in 2016 and could be cut again, but we don't see that as an immediate risk given where earnings are today.

Final Thoughts & Recommendation

NYCB offers investors what could be relatively weak total annual returns, and with some measure of risk involved. The stock's yield is certainly attractive, but shares are still well in excess of our estimate of fair value despite a recent selloff. Stricter regulations on NYCB's lending market in New York City are a concern, as well as the very high payout ratio, and the extreme loan-to-deposit ratio. The bank's recession track record is outstanding and expense controls are working well, but given the high leverage to a niche lending market, we see the risks of owning NYCB today as higher than we'd like. As such, we rate NYCB as a sell despite the strong yield.
