Overview & Current Events

BP is one of the largest oil and gas corporations in the world based on its \$122 billion market cap. It is a fully integrated company and operates in two segments: upstream and downstream (mostly refining). BP has gone through extreme challenges since its major accident in 2010. It has paid \$67 billion for this accident so far. This amount is almost equal to all its earnings since. Even in 2019, nine years after the accident, BP paid \$2.4 billion (24% of its earnings) for it. The company expects to pay less than \$1.0 billion for that accident this year. Even worse, when the oil giant began to recover in 2014, the price of oil collapsed and oil producers incurred a fierce downturn, which persisted until 2017.

However, the worst is behind BP. Thanks to the efforts of OPEC and Russia, the price of oil has doubled off the bottom it recorded in early 2016. In addition, BP has greatly improved its portfolio via the addition of low-cost reserves and has markedly increased its production in recent years.

In early February, BP reported (2/4/20) financial results for the fourth quarter of fiscal 2019. In the year, BP grew its production 3.8%, which was decent but less than the previous guidance (5%). Due to lower realized prices of oil and gas, annual earnings fell -21%, from \$12.7 billion in 2018 to \$10.0 billion.

BP announced 7 new discoveries in 2019. However, the company posted a disappointing organic reserve replacement ratio of 67% and an actual ratio of 57%, which includes asset sales. Moreover, management now expects production to fall in 2020 vs. 2019 due to declines in low-margin gas basins. This is in sharp contrast to a previous guidance for 5% annual production growth over the next three years.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	-\$1.18	\$8.06	\$5.56	\$4.26	\$3.96	-\$1.22	\$0.04	\$1.03	\$3.71	\$2.95	\$3.10	\$3.96
DPS	\$0.84	\$1.68	\$1.98	\$2.19	\$2.34	\$2.40	\$2.40	\$2.40	\$2.43	\$2.46	\$2.52	\$2.60
Shares¹	3132.8	3162.9	3186.6	3101.9	3033.3	3068.7	3239.2	3302.9	3350.3	3392	3390	3400

BP has a solid growth trajectory. It increased its output by 10% in 2017, 8% in 2018 and 4% in 2019. Since 2016, it has brought 23 major projects online and has another 12 major projects until the end of 2021. Thanks to the ramp-up in projects, the company expects to add 0.9 million barrels per day to its production base from 2018 until the end of 2021. The new reserves have 35% greater cash margins and 20% lower development cost than base reserves. As a result, management expects free cash flow to more than double, from \$6.5 billion in 2018 to \$14-\$15 billion in 2021.

Moreover, as BP drastically reduced its operating expenses in the recent downturn and now invests only in projects that are profitable below \$40 per barrel, it has reduced its breakeven point to \$50 and expects to further reduce it to \$35-\$40 by 2021. Despite the aforementioned disappointing guidance for this year, we remain confident that BP will grow its production significantly over the next five years. As we also expect somewhat higher oil prices in the upcoming years, we maintain our forecast for 5% average annual earnings-per-share growth over the next five years.

¹ In millions.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Avg. P/E	---	5.4	7.6	10.1	11.8	---	---	35.5	11.5	13.6	11.6	12.0
Avg. Yld.	1.9%	3.9%	4.7%	5.1%	5.0%	6.4%	7.3%	6.6%	5.7%	6.1%	7.0%	5.5%

Excluding the outlier year 2017, in which the depressed earnings resulted in an abnormally high price-to-earnings ratio, BP has traded at an average price-to-earnings ratio of 10.0 during the last decade. The stock has traded at such a cheap valuation mostly due to the excessive liabilities that resulted from its accident in 2010. We believe that a fair earnings multiple for the stock is around 12.0. BP is now trading at an earnings multiple of 11.6. If the stock reaches our assumed fair price-to-earnings of 12.0, it will enjoy a mild 0.7% annualized gain thanks to the expansion of its valuation level.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	---	20.8%	35.6%	51.4%	47.2%	---	---	233%	65.5%	83.4%	81.3%	65.6%

BP is currently offering a 7.0% dividend yield, which is much higher than the 5.8% yield of Exxon Mobil and the 4.8% yield of Chevron. In addition, its management is very shareholder friendly. Even when BP was forced to suspend its dividend after its Macondo blowout amid public outrage, it resumed its dividend payments after just three quarters. Moreover, even during 2015-2017, when the company incurred aggregate losses, it continued to pay its dividend, which amounted to about \$6 billion per year. The dividend is clearly a top priority for BP's management team.

Final Thoughts & Recommendation

After having incurred two fierce downturns, its accident in the Gulf of Mexico and the collapse of oil prices since 2014, BP has returned to growth. BP has greatly improved its portfolio with low-cost reserves and its stock has become markedly attractive after the indiscriminate sell-off of the energy sector, which has resulted from the threat of the coronavirus. We expect the stock to offer a 10.9% average annual return over the next five years and thus we rate it as a buy. Even if the stock price does not rise as much as we expect, the reliable 7.0% yield will compensate investors.
