Overview & Current Events

General Motors produces cars, trucks, and automobile parts, and provides automobile financing solutions to its customers. GM's brand portfolio includes Chevrolet, Cadillac, Baojun, Buick, GMC, Holden, Jiefang, Wuling, Maven, and OnStar. General Motors was founded in 1908, is headquartered in Detroit, MI, and currently trades with a market capitalization of \$32.1 billion.

General Motors reported its first-quarter earnings results on May 6, 2020. For the quarter, total revenue was \$32,709 million, which represents a decrease of (6.2)% compared to 1Q19, where total revenue was \$34,878 million. However, Income saw a much great delinked of (86.7)%, from \$2,157 million in 1Q19 to \$0.3 million this quarter. Both Diluted EPS and Adjusted EPS saw a massive loss in the first quarter. Diluted EPS saw \$0.17 a share for the quarter a decrease of (88.5)% Year over Year (YoY). Adjusted EPS saw a decline of (56)% vs. 1Q19.

COVID-19 impact on the business was \$(1.4) billion on EBIT-adjusted. Sales have been impacted differently across geographies, as many dealers saw that the demand for full-size pickups rose about 27% year over year. In total, the company sold 1,457 vehicles for the quarter, which is less than the 1,878 that was sold YOY.

The company ended the quarter with \$33.4 billion in automotive liquidity. This includes approximately \$16 billion drawdowns from its revolving credit facilities. Also, the company extended \$3.6 billion under its three-year revolving credit agreement. GM has executed aggressive measures to preserve cash. For example, the company has suspended the quarterly dividend and the company's share repurchase program.

We adjusted our expected 2020 EPS from \$6.00, in the last report, to now \$4.56.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	\$2.89	\$3.88	\$2.92	\$3.18	\$3.05	\$5.02	\$6.00	\$6.62	\$6.54	\$4.82	\$4.56	\$5.29
DPS	\$0.00	\$0.00	\$0.00	\$0.00	\$1.20	\$1.38	\$1.52	\$1.52	\$1.52	\$1.52	\$1.52	\$1.52
Shares¹	1624	1668	1675	1676	1687	1640	1570	1492	1431	1439	1439.0	1439.0

General Motors went bankrupt during the last financial crisis, was then restructured while majority-owned by the US government and was finally taken public again in 2010.

In 2021 and beyond, General Motors should see earnings-per-share growth again, through measures such as the recent introduction of a four-cylinder full-size truck and growth in international markets, primarily China. Share repurchases, which have lowered General Motors' share count over the last several years, will also play a role.

Electric vehicles, autonomous driving, and connectivity have not been a significant factor for General Motors' results in the past but could become more critical during the 2020s. General Motors invests heavily in these technologies, and management expects them to start contributing to its bottom line in the early 2021s. Thus, we are estimating 3% average growth in earnings annually for the next five years.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/E	12	7.3	8	10.5	11.3	6.8	5.2	5.7	5.8	7.8	4.9	6.3
Avg. Yld.	---	---	---	---	3.5%	4.0%	4.9%	4.0%	4.0%	4.1%	6.8%	4.6%

General Motors has never traded at an exceptionally high valuation since the company emerged from its bankruptcy in 2010. This makes sense, as the market is not keen to reward the company with a high valuation due to its poor past performance, as well as the cyclicity of General Motors' earnings. Shares trade for 4.9 times this year's EPS right now, which is below our fair value estimate. The current dividend yield of 6.8% is significantly higher than the company's 5-year average of 4.2%. Of Course, this is if the company continues to pay out the current dividend of \$1.52 for the year.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	0%	0%	0%	0%	39%	27%	25%	23%	23%	32%	33%	29%

General Motors' dividend payout ratio has declined over the last couple of years since the dividend has not been raised since 2016, while earnings-per-share have grown. The payout ratio is low, but the weak performance during the last financial crisis makes us believe that the dividend could be cut in a recession.

General Motors has a relatively stable position in the US market and the Chinese market, and General Motors is among the best-positioned companies in the truck market. General Motors is not strong in the European market, but if the company can continue to hold a healthy market share in the US and the fast-growing Chinese market, it will remain on solid footing. With that said, General Motors is vulnerable to recessions, which was dramatically illustrated during the last financial crisis. Such deep, global downturns are not very common, though, and General Motors' balance sheet is much cleaner than it was before the last crisis, and it has been improving YoY. The fiscal Year 2019 Debt to Equity was 4.36, which is better than the 4.75 D/E ratio for Fiscal Year 2018. The company thus should be able to weather future headwinds better.

Final Thoughts & Recommendation

GM Shares trade moderately below our fair value estimate. The company does sport an above-average dividend yield compared to the broader market if it continues to pay the current dividend. Thus, we project a reasonable return of 12.9% annually at the current price for the next five years. Investors should keep in mind that the automobile industry can be quite cyclical. Thus, we rate GM as a Hold today as the expected total return is too low for the potential risk that comes with investing in the auto industry.
