Overview & Current Events

Royal Dutch Shell is an oil and gas supermajor, the second largest behind Exxon Mobil in terms of annual production volumes. Shell is currently valued at \$126 billion, also ranking second among oil companies behind Exxon Mobil by that measure. Shell is headquartered in London (UK) as well as in Den Haag (Netherlands). There are two types of shares of the company; RDS.A shares, listed in the Netherlands, and RDS.B shares, listed in the United Kingdom.

In late April, Royal Dutch Shell reported (4/30/20) financial results for the first quarter of fiscal 2020. Just like in the last several quarters, total production remained essentially flat. Average realized prices of oil and gas fell -19% and -20%, respectively, and thus the adjusted earnings of the company fell -48%. The only bright spot was the Integrated Gas segment, whose earnings fell only -17% thanks to higher LNG liquefaction volumes.

Shell is now facing a severe downturn due to the coronavirus, which has caused a collapse in the demand for oil products and in the price of oil. In late March, the CEO of the company stated that the dividend was safe but in late April the company cut the dividend by -66%. It was the first time that Shell cut its dividend since World War II. The misleading stance of the CEO and the new forward dividend yield (4.1%) are certainly disappointing. We expect Shell to earn only \$1.30 per share this year due to the pandemic.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	\$6.56	\$8.67	\$8.48	\$5.20	\$4.72	\$0.60	\$1.16	\$3.84	\$5.16	\$4.08	\$1.30	\$5.00
DPS	\$3.36	\$3.36	\$3.42	\$3.56	\$3.72	\$3.76	\$3.76	\$3.76	\$3.76	\$3.76	\$1.28	\$1.88
Shares²	3,080	3,110	3,150	3,150	3,150	3,200	4,070	4,170	4,170	4,029	3,910	3,800

The earnings-per-share numbers in the above table do not look enticing. From 2011's levels, earnings-per-share declined continuously until hitting an inflection point in 2015. Since then per-share profits have risen but are still well below the peak levels hit earlier in the decade. When oil prices were around their lows, in 2015, Shell acquired BG Group, a deep-water oil and natural gas focused upstream company, in a \$53 billion deal that was criticized by many at the time. Shell grew its output considerably thanks to that acquisition, but its output has remained flat in the last two years.

Before the pandemic, management expected new projects to contribute 0.25 million barrels per day this year and 0.3 million barrels per day after 2021. That output was likely to be offset by the natural decline of existing oil fields and hence Shell had poor growth prospects even before the pandemic. This is in sharp contrast to the other oil majors, such as Chevron, BP and Total, which have grown their production at a fast clip in recent years. The stagnation of Shell has resulted from the natural decline of its fields and its extensive asset divestments, which helped fund the expensive acquisition. These two factors have also caused the duration of the reserves of Shell to fall for six years in a row and reach 7.9 years, which is much shorter than the average duration of the peer group (~11 years).

On the bright side, Shell has drastically reduced its operating expenses in recent years and has invested in high-quality, low-cost reserves, which have rendered the company more profitable than in the past at a given oil price. We expect the

¹ Forward dividend yield.

² In millions.

pandemic to subside from next year and Shell to grow its earnings-per-share at an 11.0% average annual rate over the next five years off its mid-cycle level (5-year average) of \$2.97.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/E	8.7	8.1	8.4	13.3	16.7	52	44	18.6	11.6	15.1	10.4	11.0
Avg. Yld.	5.9%	4.8%	5.1%	5.1%	4.7%	6.5%	7.4%	6.4%	6.2%	6.1%	4.1%	3.4%

Shell's valuation has moved in a very wide range throughout the last decade, which can be explained by the big movements in the company's net profits. The stock is currently trading at 10.4 times its mid-cycle earnings. This valuation level is somewhat lower than our assumed fair earnings multiple of 11.0. If the stock reverts to our fair valuation level over the next five years, it will enjoy a 1.1% annualized gain in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	51.2%	38.8%	40.3%	68.5%	78.8%	627%	324%	97.9%	72.9%	92.2%	43.1%	37.6%

In contrast to Exxon Mobil and Chevron, which are Dividend Aristocrats, Shell froze its dividend for the last four years and cut its dividend this year, for the first time since World War II. Shell exceeded Exxon in annual operating cash flows in 2017 for the first time in about 20 years and has maintained its top position in the last three years. Moreover, it can endure the ongoing downturn caused by the pandemic. Its earnings will slump this year but the oil giant is likely to recover strongly as soon as the pandemic subsides.

Final Thoughts & Recommendation

Shell has plunged -60% in the last 12 months, near its 20-year lows, primarily due to the pandemic. In addition, the company cut its dividend for the first time in 75 years. While everything looks negative for Shell right now, we believe that the security looks compelling. Shell could offer a 15.3% average annual return over the next five years, mostly thanks to higher oil and gas prices in the future. We rate the stock as a buy.
