Overview & Current Events

Oracle is an information technology company that provides software, hardware and services. Its offerings include applications, platforms and infrastructure technologies (cloud software), hardware products such as servers, hardware-related software products (e.g. operating systems) and services such as consultation & education. Oracle was founded in 1977, is headquartered in Redwood City, CA.

Oracle reported its most recent quarterly results, for its fiscal fourth quarter, on June 16. The company announced that it generated revenues of \$10.4 billion during the quarter, which represents a decline of 6% versus the prior year's quarter. This was less than what the analyst community forecasted, as the analyst community expected a 4% decline from Oracle's top line. The majority of Oracle's revenues were generated in the Cloud segment, which contributed roughly three-quarters to Oracle's top line during the quarter. Currency rate changes did impact Oracle's revenue growth by 2%. Management explains that the revenue decline was due to customers pushing back purchases during the coronavirus pandemic, but those revenues should be recognized during the coming quarters.

Oracle generated earnings-per-share of \$1.20 during the fourth quarter, which represents a growth rate of 3% versus the prior year's quarter, and which beat the consensus estimate easily.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$2.22	\$2.46	\$2.68	\$2.87	\$2.77	\$2.61	\$2.74	\$3.05	\$3.52	\$3.85	\$4.05	\$5.95
DPS	\$0.20	\$0.24	\$0.30	\$0.48	\$0.51	\$0.60	\$0.64	\$0.76	\$0.81	\$0.96	\$0.96	\$1.35
Shares³	5.07	4.91	4.65	4.46	4.34	4.13	4.14	4.05	3.50	3.50	3.40	3.10

Oracle recorded very compelling growth rates in the 2010-2014 time frame. Its earnings-per-share grew every year, and the average year-over-year growth rate was 14.5% during that time frame. Profits peaked in 2014, though, and in the following years Oracle did not manage to grow its earnings-per-share further. This period was when Oracle had to refocus its operations, as the whole software industry was moving towards the megatrend of cloud computing. It looks like Oracle has successfully managed to direct its operations towards the cloud, as earnings growth has accelerated again, while earnings-per-share hit a new record level during fiscal 2020.

Oracle is not operating a cloud business as large as its peers Amazon or Microsoft, but it could still become a key player in this market in the foreseeable future. Infrastructure-as-a-Service, as well as Platform-as-a-Service, are markets that are growing at a fast pace, and Oracle's CEO has pointed out that the underlying growth rate for Oracle's IaaS and PaaS offerings has been highly attractive, at 30%+, in the recent past. Oracle Fusion ERP and Oracle's Autonomous Database are touted by management as future growth drivers due to compelling pricing and top-tier technology. Oracle is also positively impacted by rising margins, as the company managed to reduce its cost basis relative to the revenues that the company generates. Despite a high number of new shares being issued to employees and management, Oracle's share

Oracle Corporation (ORCL)

Updated June 19th, 2020 by Jonathan Weber

count has been declining over the last couple of years thanks to many billions of dollars that Oracle spends on share repurchases. This drives the company's earnings-per-share growth further.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	13.0	12.0	12.0	12.5	15.1	14.8	15.0	15.4	14.5	13.8	13.3	14.0
Avg. Yld.	0.7%	0.8%	0.9%	1.3%	1.2%	1.6%	1.6%	1.5%	1.9%	1.8%	1.8%	1.6%

Oracle's share price has moved above \$50 again, but shares are still not looking expensive at all. Shares are trading at an earnings multiple that is slightly below our fair value estimate, as we would deem Oracle's shares fairly valued when they traded at 14 times net profits. We believe that multiple expansion will be a small tailwind for total returns over the coming years. The dividend yield of 1.8% is roughly as high as that of the broad market.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	9.0%	9.8%	11.2%	16.7%	18.4%	23.0%	23.4%	24.9%	22.8%	24.9%	23.7%	22.6%

Oracle's dividend payout ratio was extremely low a decade ago, but since then the payout ratio has risen relatively consistently. At a payout ratio of roughly 25%, the dividend is very manageable, though, and there is still a lot of room for further dividend increases. Due to the low payout ratio and the fact that the company was not overly impacted during the last financial crisis, Oracle's dividend is rated very safe.

Oracle was not hurt during the last recession, and it has to be expected that the coronavirus pandemic will not have a large impact on Oracle's business, either. Oracle has some size and scale advantages over smaller peers, although it is itself a smaller player versus peers such as Microsoft in the cloud computing industry. Thanks to strong market-wide growth rates, all companies in this field can grow at the same time, which eases competitive pressures.

Final Thoughts & Recommendation

Oracle's shift towards cloud computing continues. Revenues have not been much of a growth tailwind in recent quarters, but thanks to strong cost controls and buybacks its earnings-per-share continue to rise at a highly compelling pace. Oracle generated record profits during 2020, and 2021 will likely be an even better year for the company. Right now, shares trade below our fair value estimate, which is why we rate Oracle a buy.
