Overview & Current Events

Genesis Energy is a diversified midstream energy limited partnership, which generates 37% of its operating income from offshore pipeline transportation, 36% from sodium minerals and sulfur services, 19% from onshore facilities and 8% from marine transportation. It has a market capitalization of \$634 million.

Genesis Energy has dramatically underperformed the market in the last five years, as shares have fallen -88% whereas the S&P has rallied 79%. The underperformance of Genesis Energy reflects its poor business performance. The MLP has spent hefty amounts on capital expenses but the performance of its investments has been poor. As a result, it has posted negative free cash flows in five out of the last seven years. Moreover, it has diluted its unit holders, as it has increased its unit count by 56% in the last seven years. Furthermore, it has markedly increased its debt load, with its interest expense currently consuming all its operating income. Consequently, when some turnarounds and Hurricane Harvey adversely affected its results, the MLP was forced to cut its distribution by -31% in late 2017.

Even worse, Genesis Energy is currently facing a fierce downturn due to the coronavirus, which has caused a collapse in the demand for oil products. Due to the pandemic, the MLP cut its quarterly distribution by -73% in the second quarter, from \$0.55 to \$0.15.

In early August, Genesis Energy reported (8/5/20) financial results for the second quarter of fiscal 2020. The results were severely affected by the pandemic, which caused a collapse in the demand for soda ash and a major downturn in the oil market. Genesis Energy received cancellations of orders for more than 300,000 tons of soda ash. As a result, the MLP switched from a profit of \$40.1 million in last year's quarter to a loss of -\$326.7 million, which includes asset impairments of \$277.5 million. Distributable cash flow per unit plunged -46% over last year's quarter, from \$0.76 to \$0.41. Thanks to the recent distribution cut, the MLP now covers its distribution 2.7 times.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
DCF/U	\$2.50	\$1.52	\$1.94	\$1.68	\$2.07	\$2.18	\$2.81	\$2.52	-\$4.22	\$2.93	\$1.30	\$1.51
DPU	\$1.53	\$1.65	\$1.87	\$2.07	\$2.29	\$2.47	\$2.72	\$2.65	\$2.10	\$2.20	\$1.00	\$0.60
Shares³	40.6	67.9	78.4	84.0	90.1	103.0	113.4	121.5	122.6	122.6	122.6	150.0

Genesis Energy has grown its DCF per unit at a 7.2% average annual rate during the last five years. However, the MLP has net debt of \$3.9 billion, which is 6 times the current market cap, and a markedly high leverage ratio (net debt/EBITDA) of 5.3. Due to the high leverage of the MLP and the extensive issuance of new units, we prefer to be conservative and assume only 3.0% growth per year on average over the next five years. Part of this growth should come from the deleveraging process, which will reduce interest expense to healthier levels. The choppy and poor growth record raises a red flag amid the uncertainty that results from the pandemic.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
P/DCF	10.5	18.5	18.4	31.3	20.5	16.9	12.9	8.9	---	7.3	4.1	6.0
Avg. Yld.	7.2%	6.2%	6.0%	4.2%	4.4%	5.7%	8.1%	8.8%	9.4%	9.4%	11.3%	6.6%

Excluding the outlier years of 2013-2014, Genesis Energy has traded at an average P/DCF ratio of 13.3 during the last decade. However, as Genesis Energy currently has a high debt load, it is prudent to expect a lower DCF multiple. Using a 6.0 ratio for the MLP in 2025, the stock could enjoy an 8.0% annualized gain thanks to P/DCF expansion.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	219%	75.7%	77.0%	87.7%	78.7%	37.6%	66.2%	65.0%	38.2%	75.1%	46.2%	39.8%

Given the volatile and lackluster performance record of Genesis Energy, it is evident that there is no meaningful competitive advantage in place. While Genesis Energy operates primarily with a fee-based model, its earnings are not resilient. In our view, the MLP invested too heavily and increased its leverage too much in the past. As a result, the financial burden of its debt exerts a strong drag on its results through high interest expense and excessive dilution of its unit holders. It also renders Genesis Energy highly vulnerable to the ongoing downturn, which has resulted from the pandemic. If the downturn extends beyond this year, the MLP will come under great financial stress.

Final Thoughts & Recommendation

Due to poor business performance and its high leverage, which has caused two distribution cuts, Genesis Energy has dramatically underperformed the market in the last five years. Thanks to its depressed stock price and its resultant 11.3% distribution yield, the stock could offer a 17.8% average annual return over the next five years. However, the stock will be highly vulnerable if the pandemic extends beyond this year. While we expect the pandemic to subside from next year, we rate the stock as a buy only for those who realize its risk, can stomach high stock price volatility and are confident in a swift recovery of the economy from the pandemic.
