Overview & Current Events

UBS Group's roots go back to the mid-19th century through many different financial institutions. In 1998, two of the three largest banks in Switzerland, Union Bank of Switzerland and Swiss Bank Corporation (SBC), merged to form UBS Group. A few years later, in 2000, the bank acquired PaineWebber, a U.S. brokerage and asset management firm, to establish a presence in the U.S. market. The primary goal of UBS is to provide financial services to private, corporate and institutional clients. The bank has a market cap of $44 billion and also offers investment, retail, corporate and institutional banking, in addition to wealth management planning and asset management services.

In late July, UBS reported (7/21/20) financial results for the second quarter of fiscal 2020. The global wealth management segment, which generates 60% of the total earnings of the bank, grew its pre-tax profit by 1%, as the strong performance in international markets was offset by lower invested assets in the Americas. Due to the pandemic, credit loss expenses increased by $272 million and thus the earnings of the bank decreased -11%.

UBS is currently facing a strong headwind due to the global recession that has been caused by the coronavirus. Due to the pandemic, management expects credit losses to remain elevated in the remainder of the year, albeit below the level of the first half of the year. UBS will also experience reduced fees due to the reduced value of its assets. All these factors led UBS to cut its dividend -20% this year, from $0.69 to $0.55.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Book/S	$13.20	$15.20	$13.40	$14.30	$14.00	$14.80	$14.20	$14.10	$14.40	$15.08	***$16.20***	***$17.03***
DPS	$0.01	$0.10	$0.14	$0.22	$0.58	$0.77	$0.59	$0.67	$0.71	$0.69	***$0.55***	***$0.70***
Shares[2]	3,792	3,747	3,747	3,768	3,629	3,751	3,712	3,721	3,821	3,745	***3,700***	***3,650***

UBS Group had a terrific 2018, as it grew its earnings-per-share from $0.28 in 2017 to $1.18, but growth stalled in 2019. Moreover, UBS has a poor and inconsistent earnings growth record. We have thus used book value per share as its primary growth metric, as it shows how the company has been able to acquire new assets and revenue while it has also issued new shares. Unfortunately, UBS has been unable to grow its book value per share since 2011. We thus prefer to be conservative and assume only 1% annual growth of book value per share over the next five years. This conservative outlook is also warranted by the ongoing global recession that has resulted from the pandemic.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/B	---	---	---	---	1.25	1.35	1.01	1.15	1.15	0.80	***0.74***	***0.90***
Avg. Yld.	0.0%	0.9%	0.0%	0.0%	2.9%	2.5%	0.0%	3.3%	5.3%	5.7%	***4.6%***	***4.6%***

UBS failed to post a meaningful profit during the 2009-2013 period. In the last five years, the stock has traded at an average price-to-book value ratio of 1.11. The stock is now trading at a P/B ratio of 0.74. Given the volatile performance

record of UBS and the expected credit losses from the pandemic, we assume a fair price-to-book value ratio of 0.90 for the stock. If the stock reaches our fair value estimate over the next five years, it will enjoy a 4.0% annualized boost in its returns during this period.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	---	9%	52%	92%	52%	51%	70%	230%	57%	61%	***50%***	***58%***

Thanks to its suppressed stock price, UBS currently offers a 4.6% dividend yield. This yield will entice some investors, particularly given the decent payout ratio of 50%. However, it is important to remember that the bank posted sizeable losses during the Great Recession. In the ongoing recession, which has been caused by the pandemic, UBS cut its dividend again, but its reduced dividend seems safe for the foreseeable future, unless the pandemic takes a turn for the worse. Nevertheless, we believe that this bank is not suitable for income-oriented investors due to its volatile performance and its vulnerability to recessions.

Final Thoughts & Recommendation

UBS has posted fairly decent results in the last two years. However, interest rates in Europe have remained negative for several years in a row while the pandemic has triggered a global recession. Consequently, the stock of UBS is now trading -43% lower than it did in early 2018. Thanks to its reasonable valuation and its attractive dividend yield, UBS could offer a 9.1% average annual return over the next five years. With that said, we caution investors that this security is likely to perform poorly during a severe recession as evidenced by its weak performance over the Great Recession, when earnings collapsed, and the dividend was cut. Moreover, its volatile earnings record is a great concern to us. We thus rate the stock as a hold.
