Overview & Current Events

Williams Companies is a leading U.S. provider of infrastructure related to natural gas. It has operations across the natural gas value chain, including gathering, processing, transportation and storage of natural gas and natural gas liquids. Williams owns and operates more than 33,000 miles of pipelines, including Transco, the largest pipeline in the U.S. Its operations handle approximately 30 percent of U.S. natural gas. The stock has a market cap of \$26.3 billion.

In early August, Williams reported (8/3/20) financial results for the second quarter of fiscal 2020. The pandemic has affected the natural gas market much less than the oil market. Williams also benefits from its resilient business model, which has limited exposure to commodity prices. Given also the high gathering and processing volumes, distributable cash flow (DCF) fell only -8% over last year's quarter and thus the distribution coverage ratio remained strong, at 1.64. Management does not expect the pandemic to affect the performance of the company significantly this year. It thus reaffirmed its guidance for earnings-per-share and DCF per share of \$0.95-\$1.20 and \$2.50-\$2.83, respectively, this year.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	\$1.30	\$1.55	\$1.11	\$0.81	\$0.80	\$0.54	\$0.60	\$0.63	\$0.79	\$0.99	\$0.95	\$1.20
CFS¹	\$3.88	\$4.30	\$2.13	\$2.01	\$2.35	\$2.86	\$2.95	\$2.73	\$2.37	\$2.72	\$2.67	\$3.41
DPS	\$0.49	\$0.78	\$1.20	\$1.44	\$1.96	\$2.45	\$1.68	\$1.20	\$1.36	\$1.52	\$1.60	\$1.90
Shares¹	585	591	681	683	747	749	750	826	1,210	1,214	1,215	1,300

The large share count increase of Williams in 2018 resulted from the acquisition of the remaining 24% stake of its MLP, Williams Partners, for \$10.5 billion in an all-stock deal. The deal simplified the company's operating structure.

As the performance of Williams is affected by the strength of the natural gas market, its performance record has been remarkably volatile. It is also disappointing that the company has failed to grow its cash flow per share over the last decade. Nevertheless, Williams has grown its cash flow per share at a 3.7% average annual rate over the last five years. In addition, it benefits from the contributions of new construction projects. Thanks to ongoing expansion projects, Williams expects to enhance Transco's capacity from 17.2 to more than 18.0 million dekatherms per day in the next winter heating season. Moreover, Williams benefits from the positive long-term trends of the natural gas market, including environmental policies towards cleaner fuels. North American demand for natural gas is expected to grow at a 4.6% average annual rate over the next five years. Overall, thanks to management's guidance for a 15% annual growth rate of gathered volumes in the Northeast until the end of next year and a series of expansion projects, we expect Williams to grow its cash flow per share by about 5% per year over the next five years.

Valuation Analysis

Williams Companies (WMB)

Updated August 21st, 2020 by Aristofanis Papadatos

If we exclude the years 2013-2015, in which the depressed cash flows resulted in abnormally high price-to-cash flow ratios, Williams has traded at an average price-to-cash flow ratio of 9.5 during the last decade. Due to its high leverage, we assume a fair multiple of 7.5 for this stock. Williams is currently trading at a price-to-cash flow ratio of 7.9. If the security were to revert to our assumed fair valuation level over the next five years, the stock could incur a -0.9% annualized drag due to the contraction of its valuation level.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	12.6%	18.1%	56.3%	71.6%	83.4%	85.7%	57.0%	44.0%	57.4%	55.9%	59.9%	55.8%

Williams raised its dividend by 5% this year and it is now offering an attractive 7.6% dividend yield while it has a payout ratio of 60%. As the company seems to be in a sustained recovery phase, its dividend can be considered safe for the foreseeable future.

On the other hand, Williams was severely affected in the Great Recession and the downturn of the energy market that began in 2014. It cut its dividend in 2016. Furthermore, its current assets (\$2.3 billion) are slightly lower than its current debt (\$2.4 billion), its interest expense consumes 50% of its operating income and its net debt of \$28.2 billion is about 9 times its annual distributable cash flows. If the ongoing recession, which has been caused by the pandemic, lasts longer than expected Williams may be forced to cut its dividend. On the bright side, the pandemic has affected the natural gas market much less than the oil market.

Final Thoughts & Recommendation

Williams has doubled off its bottom in March but remains attractive. If the pandemic continues to have a muted effect on the business of Williams, the stock could offer a 10.4% average annual return over the next five years, primarily thanks to its 7.6% dividend. Nevertheless, as the company has a volatile performance record, operates with a high amount of leverage and is vulnerable to economic downturns, the stock maintains its hold rating.
