Overview & Current Events

Chubb Ltd is a global provider of insurance and reinsurance services headquartered in Zurich, Switzerland. The company provides insurance services including property & casualty insurance, accident & health insurance, life insurance, and reinsurance. The current version of Chubb was created in 2016, when Ace Limited acquired the 'old' Chubb and adopted its name. American investors can initiate an ownership position in Chubb through shares listed on the New York Stock Exchange, where they are traded with the ticker symbol CB.

Chubb reported its third quarter earnings results on October 28. The company reported that its revenues totaled \$8.8 billion during the third quarter of fiscal 2020, which was 5% more than the revenues that Chubb generated during the previous year's quarter. Net written premiums were up 6% year-over-year in Chubb's P&C segment, totaling \$8.5 billion. Chubb was able to generate net investment income of \$900 million during the quarter, which was more than during the previous quarter, when Chubb generated a net investment income of \$830 million.

Chubb generated earnings-per-share of \$2.00 during the third quarter, which was slightly less than what the analyst community had forecasted. Chubb's weaker profitability during the quarter can be explained by above-average catastrophe losses, which totaled \$925 million during the third quarter. If those would have been at the prior-year's level of \$200 million, Chubb's profitability would have been significantly stronger. Chubb's book value was up by 3% during the third quarter, compared to the book value at the end of the second quarter. Book value at the end of the third quarter stood at \$125 on a per-share basis.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	\$7.79	\$6.96	\$7.66	\$9.34	\$9.80	\$9.77	\$10.11	\$8.02	\$9.45	\$10.11	\$8.50	\$10.85
BVPS	\$68.5	\$74.1	\$81.5	\$85.6	\$90.0	\$89.8	\$103.6	\$110.3	\$109.6	\$122.4	\$127.0	\$162.1
DPS	\$1.30	\$1.50	\$1.94	\$2.14	\$2.56	\$2.64	\$2.72	\$2.80	\$2.90	\$3.00	\$3.12	\$3.92
Shares³	336	331	338	337	329	325	466	464	463	456	453	445

Chubb does not have a strong earnings growth track record. The company's earnings-per-share in fiscal 2018 were just 16% higher than the equivalent figure in 2009, which equates to an earnings-per-share growth rate of just 1.6% annually. Chubb's company-wide net profits rose at a higher pace, but the company's share count rose considerably throughout the last decade, which offset most of the business growth that Chubb generated during that time.

We believe that the more important metric to pay attention to is the company's book value per share (BVPS), due to the cyclicity of the insurance industry. Chubb has compounded its book value per share at more than 7% per year since 2009. Looking ahead, we believe that a 5% growth rate in per-share book value is feasible for Chubb. In 2018 Chubb's book value per share declined, which was based on mark-to-market losses due to the equity market sell-off in Q4 of 2018. This reversed in early 2019. A similar reversal of mark-to-market losses occurred in Q2 and Q3 of 2020.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/E	6.9	9.3	9.5	9.8	10.6	11.2	12.2	17.7	13.7	15.4	15.6	15.7
Avg. P/B	0.79	0.88	0.92	1.07	1.15	1.22	1.19	1.29	1.17	1.27	1.05	1.05
Avg. Yld.	2.4%	2.3%	2.6%	2.3%	2.5%	2.4%	2.2%	2.0%	2.3%	1.9%	2.3%	2.3%

After Chubb's valuation declined from the peak level that it had reached during 2017, shares were less expensive in recent years, and in 2020, its share price declined to an even lower level. Chubb's share price is now rather low compared to where it was in recent years, and Chubb's price-to-book multiple has declined to what we deem a very fair level. We do not see major impacts from valuation changes on Chubb's total returns going forward.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	16.7%	21.6%	25.3%	22.9%	26.1%	27.0%	26.9%	34.9%	30.7%	29.7%	36.7%	36.1%

Chubb's profits can vary from year to year, depending on the catastrophe losses and the performance of Chubb's investments during that individual year. The company nevertheless was easily able to cover its dividend payments with its net profits during each year of the last decade. The dividend payout ratio, which is less than 40% based on our estimates for fiscal 2020, leaves a lot of room for future dividend increases.

Chubb remained highly profitable during the last financial crisis, unlike many other financial companies. The company also had a relatively stable, non-volatile stock price in the past. Chubb thus may appeal to risk-averse investors who want to avoid dividend cuts and minimize the price volatility of their investment portfolios. Chubb's size and scale grew considerably thanks to the combination with ACE in 2016, which provides for scale advantages over smaller competitors.

Final Thoughts & Recommendation

Chubb has not delivered meaningful earnings growth in the past, but thanks to consistent profitability, even during the last financial crisis, its book value rose meaningfully, and should continue to rise in the long run. Chubb is a lower-risk stock, and the company should be able to weather the current coronavirus crisis without too much harm. Shares thus appeal to income investors looking for a reduced-risk investment. The total return outlook is solid, but not great, which is why we rate Chubb's stock a hold at the current price.
