Overview & Current Events

United Parcel Service, founded in 1907 and headquartered in Atlanta, GA, is a logistics and package delivery company that offers services including transportation, distribution, ground freight, ocean freight, insurance and financing. Its operations are split into three segments: US Domestic Package, International Package, and Supply Chain & Freight. UPS trades with a market capitalization of \$136 billion.

On October 28th, 2020 UPS reported Q3 2020 results for the period ending September 30th, 2020. For the quarter the company generated revenue of \$21.9 billion, a 15.9% increase compared to Q3 2019, as consolidated average daily volume grew 13.5%. The U.S. Domestic segment (making up 62% of sales) saw a 15.5% revenue gain, while the International And Supply Chain & Freight segments posted gains of 17.0% and 16.5% respectively. Net income equaled \$2.0 billion, an 11.8% improvement, while adjusted earnings-per-share equaled \$2.28, up 10.1%. UPS continues to post solid results lately, driven by changes in demand that emerged from the COVID-19 pandemic.

Prior to the pandemic UPS provided a 2020 outlook anticipating adjusted free cash flow to be between \$4.3 and \$4.47 billion, and adjusted earnings-per-share in the \$7.76 to \$8.06 range. This guidance was withdrawn earlier in the year.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	\$3.56	\$4.23	\$4.53	\$4.61	\$4.75	\$5.43	\$5.75	\$6.01	\$7.24	\$7.53	\$7.30	\$10.24
DPS	\$1.88	\$2.08	\$2.28	\$2.48	\$2.68	\$2.92	\$3.12	\$3.32	\$3.64	\$3.84	\$4.04	\$5.16
Shares²	987	963	953	924	905	886	868	859	858	857	875	860

During the last financial crisis, UPS' profitability declined substantially. Earnings-per-share dropped from \$4.11 in 2007 to \$2.31 in 2009. Since then profits had risen relatively consistently. When we look at the 2007-2019 timeframe, earnings-per-share grew by 5.2% annually. The growth rate since 2010 has been 8.7% per annum. However, profit growth during 2018 was higher than in recent years, which is due to the positive one-time impact of a tax rate decline due to tax legislation changes in late 2017.

UPS had been experiencing a number of benefits in recent years. One such tailwind is e-commerce, which leads to growth in the number of packages that have to be transported across the country. A strong economy drives demand for UPS' services by businesses as well as by consumers, which increase their spending due to higher disposable incomes. With online shopping growth continuing to outpace brick-and-mortar growth in the foreseeable future, UPS should continue to benefit from strong demand for its services.

Results were impressive in Q2 and Q3 2020, despite the ongoing COVID-19 pandemic. Moreover, the long-term tailwinds are very much intact. Indeed, this crisis has sped up the trend of online shopping. We have increased our earnings-per-share estimate for this year, although it still trails 2019's mark. In addition, we are reducing our intermediate-term growth rate from 8% to 7%. However, this still implies an increased intermediate-term earnings assumption coming off of a higher base.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/E	18.1	16.7	16.7	19.3	21.2	18.5	18.4	18.6	15.6	14.7	21.3	17.0
Avg. Yld.	2.9%	2.9%	3.0%	2.8%	2.7%	2.9%	2.9%	3.0%	3.2%	3.5%	2.6%	3.0%

Over the past decade shares of UPS have traded with an average P/E ratio about 18 earnings. While we believe a moderate premium is warranted for the quality of the business, we are more comfortable with 17 times earnings as a fair value baseline. With shares trading near 21 times our estimate of depressed earnings, this implies the potential for a valuation headwind.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	53%	49%	50%	54%	56%	54%	54%	55%	50%	51%	55%	50%

United Parcel Service did not cut its dividend during the last financial crisis, but its payout ratio rose to a relatively high level due to the decline in the company's net profits. Since then, the payout ratio has stabilized around 50%, which appears highly sustainable. We believe that a dividend cut is unlikely, although not impossible during a steep recession.

UPS is the largest logistics/package delivery company in the US. Its top peers include FedEx, DHL Express, and the United States Postal Service. The long-term macro environment is beneficial for the whole industry, thanks to the megatrend of online shopping. None of the big players have an interest in a price war, so volumes could continue to rise even if base pricing is increased over time. Competitive pressures should therefore remain muted for the foreseeable future. UPS was impacted significantly during the last financial crisis, which should be monitored this time around as well.

Final Thoughts & Recommendation

After being up 44% in our last report, shares are up another 11% in the last three months. United Parcel Service is one of the key companies in an industry that benefits from the online shopping megatrend. It seems likely that UPS will be able to grow its earnings-per-share at a solid pace over the intermediate term, the current crisis notwithstanding. Total return potential comes in at 4.9% per annum, consisting of 7% growth and a 2.6% dividend yield offset by the potential for a valuation headwind. Due to the high valuation, shares continue to earn a hold rating.
