Overview & Current Events

ConocoPhillips is the world's largest independent oil and gas producer, with a normal production of 1.3 million barrels per day and a market capitalization of \$35.6 billion. It was founded in 2002 and is headquartered in Houston, Texas.

In late October, ConocoPhillips reported (10/29/20) financial results for the third quarter of fiscal 2020. As ConocoPhillips is a pure upstream company, it continued to be severely affected by the pandemic. The average realized oil price plunged -34% over last year's quarter, from \$47.1 to \$30.9. As a result, the company drastically cut its production, by -11%, and switched from a profit of \$0.82 per share in last year's quarter to an adjusted loss of -\$0.31 per share. The 11% production cut of ConocoPhillips resulted primarily from intentional production curtailment due to low oil prices. However, ConocoPhillips ended its curtailment program in the third quarter.

On October 19th, 2020, ConocoPhillips agreed to acquire Concho Resources for \$9.7 billion in an all-stock deal. This is the largest shale oil deal this year and will boost the output of the new company above 1.5 million barrels per day.

ConocoPhillips pursued this deal thanks to the low production cost of Concho and the high rate of return of this deal.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	\$5.92	\$8.76	\$5.91	\$6.43	\$4.96	-\$1.39	-\$2.52	\$0.61	\$4.54	\$3.59	-\$0.90	\$4.07
DPS	\$2.15	\$2.64	\$2.64	\$2.70	\$2.84	\$2.94	\$1.00	\$1.06	\$1.16	\$1.33	\$1.69	\$1.80
Shares¹	1430	1290	1220	1230	1230	1240	1240	1180	1140	1100	1078	1000

When oil prices began to collapse in 2014, ConocoPhillips was, among the large oil companies, the producer that suffered the most. The company posted heavy losses in 2015 and 2016 and its stock price fell -60% from its peak. However, the company seems to have learned its lesson. It has focused on high-grading its asset portfolio with the addition of low-cost barrels in order to achieve positive free cash flows even at oil prices below \$40.

The company grew its underlying production by 5% in each of the last two years but it is now facing the headwind of the pandemic. Nevertheless, we expect the energy market and the company to begin recovering from next year. Moreover, cost-cutting efforts during the oil price slump have enhanced the efficiency of ConocoPhillips. We thus expect ConocoPhillips to grow its earnings-per-share at a 7.0% average annual rate off its mid-cycle (3-year average) earnings-per-share of \$2.90. It is also worth noting that ConocoPhillips has reduced its net debt by -57%, from \$52.7 billion in 2014 to \$22.8 billion. As a result, interest expense has dropped -37% in the last three years. We expect a further decrease in interest expense to contribute to earnings growth significantly.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025

ConocoPhillips (COP)

Updated November 10th, 2020 by Aristofanis Papadatos

ConocoPhillips is now trading at 11.4 times its mid-cycle earnings-per-share. The data of the above table shows that the stock had its lowest price-to-earnings ratios in the years it posted its maximum profits (2010-2013). We have assumed a fair price-to-earnings ratio of 11.9 for 2025, which is the average earnings multiple over the last decade. If this proves correct, the stock would enjoy a modest 0.9% annualized valuation gain in its returns over the next five years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	36.3%	30.1%	44.7%	42.0%	57.3%	---	---	174%	25.6%	37.0%	58.3%	44.3%

Since ConocoPhillips is a pure upstream company, it is much more leveraged to the price of oil than the well-known supermajors like Exxon Mobil, Chevron, and Total. Those companies remained profitable in the previous downturn of the energy sector (2014-2017) and avoided cutting their dividends. On the contrary, ConocoPhillips incurred heavy losses in 2015-2016 and cut its dividend by -66% in 2016. This unconvincing history, coupled with the high cyclical nature of ConocoPhillips' business, makes us believe that the company is not a safe income stock.

ConocoPhillips has made questionable investments in the past, such as its drilling rights in the U.S. Arctic and its deep-water business in Senegal. However, the company seems to have learned its lesson and has become much more disciplined, investing only in high-return projects. Nevertheless, investors should be aware of the sensitivity of ConocoPhillips to the price of oil. During the last financial crisis, earnings-per-share plunged -70%. In the ongoing downturn, the company is poised to post losses and may cut its dividend once again.

Final Thoughts & Recommendation

ConocoPhillips is an oil and gas pure upstream play that is highly leveraged to the price of oil. This allows for strong earnings growth during good times but the company is highly vulnerable to downturns in the energy sector and hence the stock is highly cyclical. As we expect the energy market to begin to recover from the pandemic next year, the stock may offer an 11.6% average annual return over the next five years. It thus receives a buy rating, though investors should be aware of the risk of the stock in the event of a prolonged pandemic.
