Overview & Current Events

Headquartered in Houston, TX, Main Street Capital Corporation is a Business Development Company (BDC) that provides long-term debt and equity capital to lower middle market companies and debt capital to middle market companies. Main Street defines lower middle market companies as generally having annual revenues between \$10 million and \$150 million. The company's investments typically support management buyouts, recapitalizations, growth financings, refinancing and acquisitions. As of the end of 3Q2020, Main Street had an interest in 70 lower middle market companies, 42 middle market companies and 68 private loan investments. The company has a market capitalization of \$2.1 billion and generated \$157 million in net investment income last year.

On November 5th, Main Street Capital released third quarter results. Net investment income of \$30.5 million was a 22% decrease compared to \$39.0 million a year ago. The corporation generated net investment income per share of \$0.46, down 26% from last year's income of \$0.62. Distributable net investment income totaled \$0.50, down 24% from \$0.66 in the third quarter of 2019.

Main Street's net asset value decreased from last year. From \$23.91 net asset value per share at the end of 2019, MAIN dropped to \$21.52 today. This represents a total net asset value of \$1.4 billion, which today the company is trading above with a market cap of \$2.1 billion.

The corporation declared monthly dividends of \$0.205, and no December special dividend was announced. There will likely be no special dividends in 2020. The dividend income which MAIN earns from their investment portfolio dropped by \$4.3 million, or 35% from the prior year period.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
NIIPS	\$1.16	\$1.69	\$2.01	\$2.06	\$2.20	\$2.18	\$2.23	\$2.39	\$2.60	\$2.50	\$1.85	\$2.04
DPS	\$1.50	\$1.56	\$1.71	\$2.66	\$2.55	\$2.65	\$2.73	\$2.79	\$2.85	\$2.91	\$2.46	\$2.59
Shares¹	16.3	22.9	29.5	36.6	43.5	49.1	52.0	56.7	60.2	63	68.0	85.0

NIIPS stands for Net Investment Income Per Share. Main Street's calculation of distributable net investment income excludes the impact of share-based compensation. We believe this is a real expense, and thus have elected to use net investment income instead. Main Street has put together a solid record in the past decade. From 2010 through 2019, Main Street was able to grow net investment income by an average compound rate of 8.9% per year. This even though the company pays out basically all its income in the form of dividends and needs to issue shares in order to fund growth. Speaking of which, both aspects are worth describing in a bit more detail. Main Street's dividend policy is somewhat different from your typical firm. The company pays a monthly dividend, currently sitting at \$0.205 or \$2.46 on an annual basis, along with supplemental dividends in June and December (skipped this June due to COVID-19). The supplemental dividend was last lowered from \$0.25 to \$0.24, while the company keeps its trend of increasing the regular monthly dividend by \$0.005 every few quarters. The supplemental dividends have been a result of generating realized gains from Main Street's equity investments. Starting in 2019, Main Street began gradually reducing its supplemental dividend and

absorbing it into the regular monthly dividend. Importantly, as a result of the BDC structure, dividends are classified as both ordinary and qualified dividends along with realized gains. Regarding the share count, you can see this growing significantly over time. In order to avoid corporate income tax, Main Street must distribute at least 90% of their taxable income, leaving little wiggle room to fund growth. While this strategy has worked extremely well since the last recession, we do caution that this method of funding becomes substantially less attractive (and more expensive) in lesser times. As such, we have tempered our growth expectations.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/E	15.7	12.6	15.2	15.9	13.3	13.3	16.5	16.6	13.3	16.4	17.4	14.0
Avg. Yld.	8.2%	7.5%	6.4%	8.1%	6.9%	7.3%	7.4%	7.0%	6.7%	6.8%	7.6%	9.0%

Over the past decade shares of Main Street have traded at an average P/E ratio of 15 times earnings. Given the current crisis, we estimate fair value of 14 times earnings, and see an annual decline of the valuation by 5%. We believe the yield will remain near 10%, and the payout ratio is in dangerous dividend reduction territory. We do not anticipate any special dividends in 2020 and thus have reduced our 2020 dividend estimate.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	129%	92%	85%	129%	116%	122%	122%	117%	110%	116%	133%	127%

Main Street's competitive advantage lies in its portfolio of small company interests, allowing for equity and debt exposure that would be difficult to replicate, along with the company's management. In the last decade, the company has performed well, acting like a fund for small companies and passing along the income and gains to investors. The payout ratio detailed above is notable for two reasons. From an income standpoint, it highlights the BDC's pass through status, requiring the company to pay a substantial dividend. From a safety standpoint, it shows that there is not much room for lesser performance. Indeed, given the idea of continued equity issuance to fund investments, growth has come under serious pressure during the ongoing COVID-19 crisis, particularly within the middle market portfolio.

Final Thoughts & Recommendation

Main Street has put together a solid record in the last decade. The company's model is unusual for common equity, but typical of a pass-through entity – paying out all of earnings and funding growth by issuing shares. This leads to two distinct items: an above average dividend yield and an ever-increasing share count. We estimate total returns of 5.1% moving forward, consisting primarily of the dividend. We rate shares as a hold at the current price, noting the gloomy economic outlook and a likely dividend reduction if the crisis persists.
