Overview & Current Events

Orchid Island Capital, Inc. is a Real Estate Investment Trust, or REIT, operating in the mortgage industry. Mortgage REITs differ from most other REITs. For example, traditional REITs typically own a portfolio of physical real estate, which they lease to tenants to collect rental income. Mortgage REITs are purely financial entities, and Orchid Island does not own any physical properties. Instead, it is an externally managed REIT (by Bimini Advisors LLC) that invests in residential mortgage-backed securities (RMBS), either pass-through or structured agency RMBSs, which are financial instruments that collect cash flow based on residential loans such as mortgages, including subprime, and home-equity loans. The \$378.4 million market capitalization trust is based in Vero Beach, FL.

On October 29th, 2020 Orchid Island Capital reported Q3 results. Net interest income came in at \$27.2 million, up from \$22.8M in Q2 but declined from \$35.9M in the year-ago quarter. Earnings-per-share came in at \$0.42 compared to \$0.73 per share in Q2 and a loss of \$0.14 per share in the year-ago quarter. Book value per share stood at \$5.44 at quarter end. The company's average economic interest rate spread came in at 2.07% for the quarter. The company also received \$123.5M in scheduled and unscheduled principal repayments and prepayments, which amounted to a 3-month constant prepayment rate of ~17.0%, up from ~16.3% sequentially.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
BPS	---	---	---	\$13.40	\$13.06	\$11.64	\$10.10	\$8.71	\$6.84	\$6.22	\$5.35	\$4.84
EPS	---	---	---	-\$0.23	\$2.48	\$0.05	\$0.08	\$0.05	-\$0.85	\$0.00	\$1.16	\$0.50
DPS	---	---	---	\$1.395	\$2.16	\$1.92	\$1.68	\$1.68	\$1.07	\$0.96	\$0.78	\$0.50
Shares³	---	---	---	3,012	9,890	20,267	24,100	41,062	52,198	54,000	54,000	60,000

Orchid Island has reported extreme earnings volatility over the past several years, with a net loss in 2013 and 2018, along with multiple years in which the trust barely generated a profit. As a result, we are using book value per share as an alternate metric to earnings-per-share. The growth outlook for mortgage REITs is challenged. Mortgage REITs make money by borrowing at short-term rates and lending at longer-term rates, then pocketing the difference. This is referred to as the spread, which is how Orchid Capital generates its cash flow. When the spread between short-term rates and long-term rates compresses, profitability erodes at a rapid pace. This is why mortgage REITs can be dangerous if the yield curve flattens.

In addition, while the dividend yield is sky high, the payout record has been uninspiring. After bumping the dividend to \$0.18 per month in late 2013, Orchid Island paid this dividend rate for 19 months before dropping it to \$0.14 per month in 2015 (paid for 30 months), then down to \$0.11 in 2018 (paid two months), down to \$0.09 (paid 5 months) and the current mark sits at \$0.065. Furthermore, this large dividend payout combined with minimal earnings will continue to erode the trust's book value.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/B	---	---	---	0.93	1.01	0.98	1.02	1.17	0.93	0.91	1.02	0.75
Avg. Yld.	---	---	---	11.2%	16.3%	16.9%	16.3%	16.5%	16.7%	17.0%	14.2%	13.8%

Since we are using book value instead of earnings-per-share, we will also use the price-to-book ratio for valuation instead of the price-to-earnings ratio. The stock presently has a price-to-book ratio of 1.02, compared with our fair value estimate of 0.75 which accounts for uncertainties and risks facing the business. In turn, investors could experience a valuation headwind over the next five years.

Some investors may be enticed by the extremely high dividend yield for the stock, which drives the investment thesis. However, we offer two cautionary notes. First, the dividend has already been cut on four separate occasions since 2015 and we are expecting another one in the future. Second, and just as important, is that despite an exceptionally high starting yield, total returns can be dampened significantly by the erosion in the share price as time goes on. This idea is underscored by the virtually nil total returns since the security's inception, despite carrying a double-digit dividend yield throughout this period.

Safety, Quality, Competitive Advantage, & Recession Resiliency

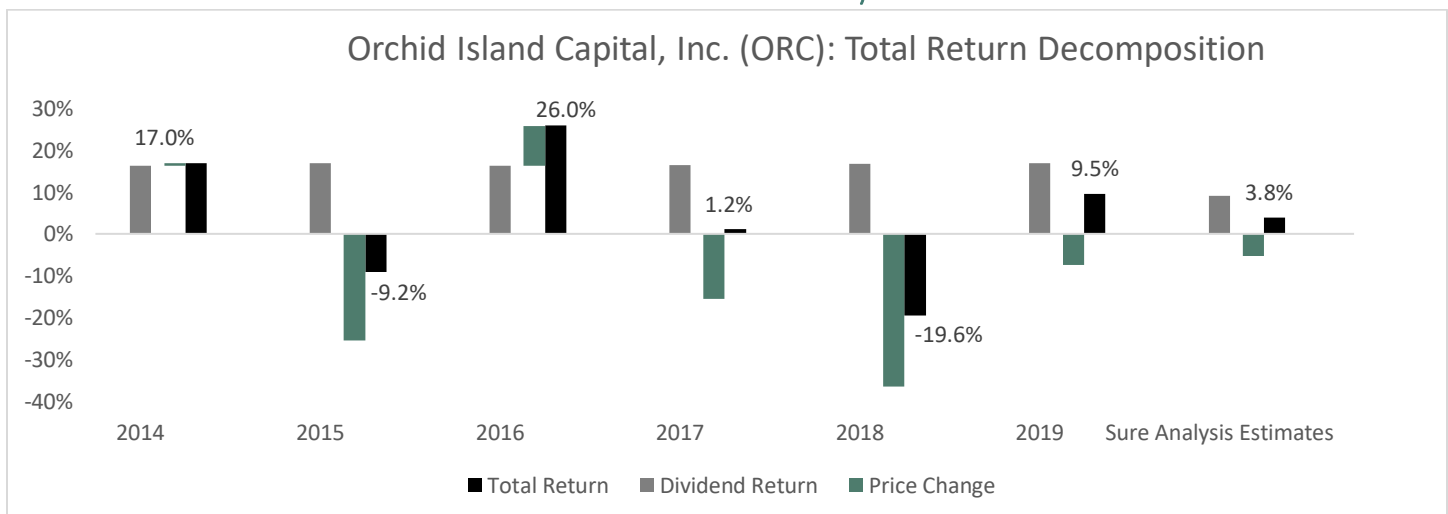

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	---	---	---	---	87%	3,740%	2,000%	3,260%	---	---	67%	100%

Orchid Island is not a safe stock. The above payout ratios are extreme due to low or non-existent earnings. Mortgage REITs are exposed to a number of risks, including interest rate risk, as well as credit risk. These risks pertain to the direction of interest rates, as well as the ability of borrowers to repay the mortgage loans. Moreover, mortgage REITs do not possess many competitive advantages. Since mortgage REITs do not provide differentiated products and services, traditional competitive advantages such as brand power or manufacturing efficiencies do not apply. In addition, Orchid Island is not a recession-resistant trust. A recession generally leads to higher mortgage defaults.

Final Thoughts & Recommendation

We believe that the dividend will likely be cut again and that the book value will continue to decline. Therefore, despite an extremely attractive dividend yield and positive annualized total return potential of 3.8%, we rate the stock a sell or all but the most aggressive, yield-chasing investors.
