Overview & Current Events

Rockwell Automation is an industrial company that is active in the industrial automation and information segments. Its business units include Architecture & Software as well as Control Products & Solutions. The company was founded in 1928, is headquartered in Milwaukee, WI, and produces more than \$6 billion in annual revenue.

Rockwell reported its fourth quarter (fiscal 2020) earnings results on November 10. Total revenue was \$1.57 billion for the quarter, which was down 9% against the previous year's quarter. Organic sales were down 12% year-over-year, while acquisitions had a positive impact on the company's reported revenue growth rate. Rockwell Automation's profitability was better than expected during the quarter, although profits were still down year over year.

Rockwell Automation's fourth quarter earnings-per-share came in at \$1.87 on an adjusted basis, which was better than expected by the analyst community. Management believes that the impact that the coronavirus crisis will have on its earnings will decline going forward, which is why the forecast for fiscal 2021's earnings-per-share has been increased to \$8.45 to \$8.85, or \$8.65 at the midpoint. This means that profits during the current year will, in all likelihood, be back at pre-crisis levels once again, and the current pandemic should not have a long-lasting impact.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$4.79	\$5.13	\$5.36	\$5.91	\$6.09	\$5.56	\$6.35	\$8.11	\$8.67	\$7.68	\$8.65	\$11.85
DPS	\$1.48	\$1.75	\$1.98	\$2.32	\$2.60	\$2.90	\$3.04	\$3.68	\$3.88	\$4.13	\$4.28	\$6.00
Shares³	142	140	139	137	132	129	128	122	117	117	114	110

Between 2007 and 2019, Rockwell Automation grew its earnings-per-share at a very solid pace of 8% annually. Profits declined substantially during the financial crisis, though; between 2008 and 2009, Rockwell Automation's earnings-per-share were cut in half, which shows that the company's business can be quite cyclical.

Rockwell Automation's strong earnings growth during fiscal 2018 and 2019 was due to fundamental improvements and the impact of tax law changes. Higher sales, margin increases, a lower tax rate, and a decline in the company's share count explain how the company was able to grow its earnings-per-share by 28% during one single year. In fiscal 2020, however, Rockwell had to report lower profits, as the pandemic impacted its business considerably during the year, which is why its revenues and earnings declined versus pre-crisis levels. According to management, 2021 will see a reversal of that decline, however, and it is expected that Rockwell Automation's earnings-per-share will recover to pre-crisis levels seen in fiscal 2019. Revenues will likely still be down versus previous peak levels, at least during the first couple of quarters of fiscal 2021, as some of Rockwell's end markets are still feeling pandemic headwinds. Rockwell sees long-term tailwinds from its China business, as well as from other emerging markets such as Brazil, Mexico, and other countries in Latin America. Trade troubles between the US and China, and worries about an economic slowdown around the globe have led to some deterioration in Rockwell's short-term growth outlook.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	15.8	14.3	16.2	19.9	18.7	19.7	23.6	23.4	19.1	19.1	28.4	18.0
Avg. Yld.	1.9%	2.4%	2.3%	2.0%	2.3%	2.7%	2.0%	2.1%	2.3%	2.3%	1.7%	2.8%

Rockwell Automation trades at more than 28 times this year's expected net profits right now, based on management's current guidance midpoint. This means that shares are trading well in excess of our estimate of fair value, which we see at 18 times earnings. We forecast a substantial multiple compression headwind to total returns in the coming years, as Rockwell Automation's valuation normalizes back towards a lower valuation.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	30.9%	34.1%	36.9%	39.3%	42.7%	52.2%	47.9%	45.4%	44.8%	53.8%	49.5%	50.7%

Rockwell's dividend payout ratio has been around 40%-50% throughout the majority of the last decade, although the payout ratio was substantially higher during the last financial crisis. The company did not have to cut its dividend during that especially harsh recession, though, which makes us believe that the company's dividend is relatively safe, despite the cyclicity of Rockwell Automation's business.

Rockwell's earnings-per-share dropped by more than 50% from 2008 to 2009, which shows that the company can be relatively vulnerable to broad economic downturns. During the coronavirus crisis, Rockwell Automation's profits will most likely not drop this much, but there will still be a decline. Rockwell is well positioned internationally, as it generates roughly half of its sales outside of the US. Rockwell's strong position in the higher-growth emerging markets could provide a growth advantage versus peers that are more focused on lower-growth markets in industrial countries.

Final Thoughts & Recommendation

Rockwell Automation operates a business that can be quite cyclical, but the company nevertheless managed to generate solid earnings-per-share growth throughout much more than the last decade, even though the last financial crisis was an exceptionally harsh recession. The current coronavirus crisis has left a mark as well, but the company will recover to pre-crisis profitability during the current year, fiscal 2021. We still rate the stock a sell, as shares trade well in excess of our fair value estimate at current prices, which hurts the total return outlook a lot.
