Overview & Current Events

Snap-On Inc. was founded in the early 1920's and since that time, has grown from a fledgling direct sales distributor of sockets to a full-service, global distributor of a wide array of common and specialty tools, diagnostics equipment, repair information and system solutions instruments. Snap-On also operates a sizable financial services business that finances its customers' purchases in-house. The company's market capitalization is \$9.5 billion after a sizable rally, and it should generate around \$3.5 billion in revenue this year.

Snap-On reported third quarter results on October 22nd, 2020 and results came in much better than expected on both the top and bottom lines. Total sales were up 4.4% year-over-year, showing 3.8% organic sales gains, with the balance coming from acquisitions. The company also saw a \$4.2 million tailwind from forex translation. Financial Services revenue was up 2% year-over-year to \$86 million, while the total was just over one billion dollars.

The Commercial and Industrial segment saw sales decline -8% to \$308 million, while Repair Systems and Information fell fractionally to \$318 million. All of the company's growth in Q3 was from the flagship segment, Snap-On Tools, which saw a 17% increase in sales to \$450 million.

Gross margins were up slightly to 49.9% of revenue, and operating margin expanded 133bps to 26.7% of revenue. Excluding financial services, operating margin rose 113bps to 19.7%.

Net cash provided by operating activities was \$224 million, up from \$131 million in the year-ago period. Free cash flow was a similar story, more than doubling year-over-year to \$202 million.

Earnings came to \$180 million, or \$3.28 per diluted share, up from \$165 million, or \$2.96 per diluted share in the year-ago period. We've boosted our estimate for this year to \$10.70 in earnings-per-share after a very strong Q3.

Growth on a Per-Share Basis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
EPS	\$3.19	\$4.50	\$5.20	\$5.93	\$7.14	\$8.10	\$9.20	\$10.12	\$11.81	\$12.41	\$10.70	\$13.02
DPS	\$1.22	\$1.28	\$1.36	\$1.58	\$1.85	\$2.20	\$2.54	\$2.95	\$3.41	\$3.93	\$4.92	\$7.23
Shares¹	58	58	58	58	58	58	58	57	57	55	54	52

With the exception of 2009, Snap-On has produced materially higher earnings every year in the past decade. The company's constant focus on acquisitions, as well as its own organic revenue growth in concert with a rapidly growing financial services business, has created a growth profile that is tough to rival. The company continues to buy back its stock as well, providing another tailwind for earnings-per-share. Indeed, it has managed to compound earnings at an average rate of nearly 20% annually in the past decade.

However, we are forecasting a 4% annual growth rate going forward as Snap-On grapples with waning demand for its products, driving revenue and margins lower. We note that the return to growth from the massive slowdown in the first half of the year appears to be gathering momentum more quickly than originally anticipated.

Snap-On Inc. (SNA)

Updated November 27th, 2020 by Josh Arnold

The dividend should keep increasing at high rates as the payout ratio is still low. Snap-On produces more cash than it can use to profitably invest in the business, so shareholders should see the benefit. Indeed, the company raised its dividend by 14% for the December payout, similar to 2019.

Valuation Analysis

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	Now	2025
Avg. P/E	14.4	12.3	12.7	15.6	16.8	19.1	17.1	16.3	13.7	12.9	16.4	14.0
Avg. Yld.	2.7%	2.3%	2.1%	1.7%	1.5%	1.4%	1.6%	1.8%	2.1%	2.5%	2.8%	4.0%

Snap-On's price-to-earnings multiple has spent the past several years in the mid-teens. After a strong rally in the stock, it trades for 16.4 times earnings. This compares unfavorably to our estimate of fair value at 14 times earnings. As a result, we see a modest headwind to total returns from the valuation moving higher over time.

We see the yield rising to the 4% area and Snap-On's impressive dividend growth, coupled with its decent current yield, make it a nice choice for dividend investors.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2025
Payout	38%	29%	27%	26%	26%	27%	27%	28%	29%	32%	46%	56%

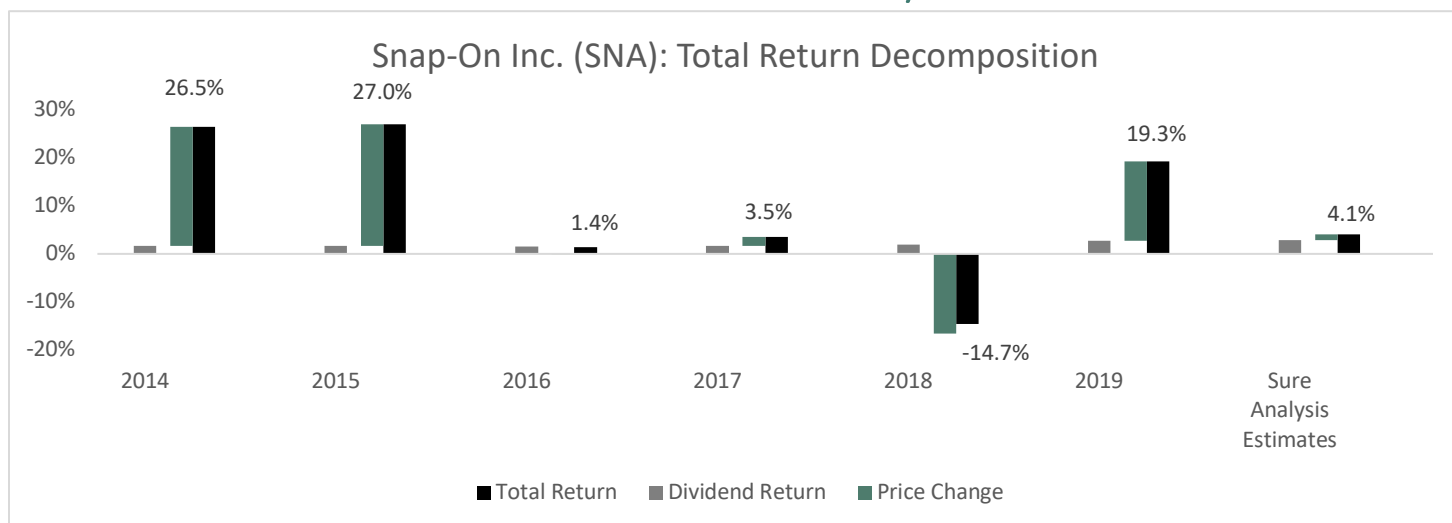

The payout ratio is still relatively low and should remain that way unless management decides to ramp up its dividend growth strategy, which we view as unlikely at this point given already-strong growth rates.

Snap-On's main competitive advantage is in its very broad and deep assortment of all kinds of specialty tools. In addition, its global reach and in-house financing is a unique combination not found elsewhere. The financing business could pose a problem during a recession as customers may become past due on their accounts, so this would be the principal risk for Snap-On during the next economic downturn. Earnings suffered mightily during the Great Recession.

Final Thoughts & Recommendation

Snap-On is overvalued in our view. We now see total annual return potential of 4.1% going forward, consisting of the 2.8% current yield, 4% earnings growth, and a headwind from the valuation. The rebound from COVID-related weakness is progressing nicely, but shares are above our fair value estimate. Given this, we reiterate our hold rating on the stock.
