Overview & Current Events

Sempra Energy (SRE) was founded 20 years ago and has grown into a \$34 billion market cap company. It serves one of the largest utility customer bases in the U.S., as it distributes natural gas and electricity in Southern California (over 20 million customers) and owns a majority stake in Texas-based Oncor, a transmission and distribution business (over 10 million customers). The company also owns and operates other utilities and merchant renewable energy projects, liquefied natural gas facilities, and gas pipes and storage in the U.S. and Latin America.

Sempra Energy benefits from two key trends, namely the transition towards cleaner energy resources and the advance of the U.S. as a global energy leader. In 2018, the company sold most of its non-core assets in order to better focus on its large core North American regulated utility, LNG export, and Mexican infrastructure (IEnova) assets as well as deleverage the balance sheet. Given the strong competitive advantages enjoyed by these core assets and the late stage in the economic cycle, we believe that these moves have made Sempra Energy more attractive.

In late February, Sempra Energy reported (2/25/21) financial results for the fourth quarter of fiscal 2020. In the year, adjusted earnings-per-share grew 18%, from \$6.78 to \$8.03, primarily thanks to high growth in the earnings of Cameron LNG and strong performance in the regulated business in California. In August-2020, the Cameron LNG export facility in Louisiana reached full commercial operations, with 12-month earnings expected around \$400-\$450 million. As a utility, Sempra Energy is essentially immune to the recession that has resulted from the pandemic. Management raised the dividend by 5.3% and reaffirmed its guidance for earnings-per-share of \$7.50-\$8.10 in 2021. We view this guidance as somewhat conservative. Given also the fact that Sempra Energy has exceeded analysts' earnings-per-share estimates in 8 of the last 10 quarters, we expect it to earn approximately \$8.05 per share this year.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$5.51	\$3.48	\$4.01	\$4.63	\$5.37	\$5.46	\$5.42	\$5.57	\$6.78	\$8.03	\$8.05	\$10.27
DPS	\$1.92	\$2.40	\$2.52	\$2.64	\$2.80	\$3.02	\$3.29	\$3.58	\$3.87	\$4.18	\$4.40	\$5.62
Shares¹	242	247	249	251	251	251	252	270	289	290	292	350

Sempra's enormous economies of scale and regulated monopolies in California and Texas should enable it to capitalize on any economic growth in those regions to drive long term growth. The U.S. economy is currently going through a severe recession due to the coronavirus, but we expect the pandemic to subside and the economy to return to growth mode in the second half of this year. Sempra Energy has a 5-year capital plan of \$32 billion, which will be a growth driver in the upcoming years. Additionally, Sempra's assets in Mexico enjoy a first mover advantage, which should enable them to grow rapidly as Mexico begins to invest more seriously in its massively underdeveloped infrastructure. The LNG export portfolio should also see strong demand in the long run, as the U.S. continues its transition into a global energy exporting giant. As a result, management has several expansion projects, which should contribute significantly to the company's cash flows. As this year's expected record earnings will form a high base for future comparison, we expect 5% annual growth over the next five years.

¹ In millions.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	10.1	20.7	22.3	24.1	17.3	18.5	19.8	19.4	19.8	16.1	14.7	18.8
Avg. Yld.	3.4%	3.3%	2.8%	2.4%	3.0%	3.0%	3.1%	3.3%	2.9%	3.2%	3.7%	2.9%

Sempra Energy is currently trading at a price-to-earnings ratio of 14.7, which is lower than its 10-year average of 18.8.

We expect the stock to trade close to its average valuation level in five years. If this occurs, the stock will enjoy a 5.1% annualized expansion of its price-to-earnings ratio.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	34.8%	69.0%	62.8%	57.0%	52.1%	55.3%	60.7%	64.3%	57.1%	52.1%	54.7%	54.7%

As a regulated utility in possession of dominant businesses in their respective regions, Sempra Energy possesses a clear moat around a significant portion of its earnings. At the same time, however, the regulated nature of its pricing prevents it from earning surplus profits. These businesses, as well as the stable, mission-critical nature of its infrastructure business in Mexico make it quite recession resistant. As proof of this, Sempra's earnings-per-share increased during the Great recession (2008 and 2009) and have increased in the ongoing recession as well. However, its LNG export business and international exposure make it susceptible to commodity price, geopolitical, and currency exchange risks. Nevertheless, its high-quality assets, low payout ratio, stable cash flows and strong growth prospects make it a fairly low-risk investment. Moreover, while the company has a somewhat weak balance sheet, it has improved its interest coverage ratio to 2.8 thanks to the sale of non-core assets.

Final Thoughts & Recommendation

Sempra Energy owns quality assets, many of which are in recession-resistant businesses. Its utilities businesses are dominant players in their fields and its LNG export and infrastructure businesses have strong growth prospects. Combined, they create a business that has both stable and defensive characteristics. The stock has corrected -13% lately and we are forecasting a 13.1% average annual return over the next five years. It thus earns a buy rating.
