Dividend Risk Score:	A	Retirement Suitability Score:	A	Last Dividend Increase:	1.0%

Overview & Current Events

Emerson Electric was founded in Missouri in 1890 and since that time, it has evolved through organic growth, as well as strategic acquisitions and divestitures, from a regional manufacturer of electric motors and fans into a \$57 billion diversified global leader in technology and engineering. Its global customer base and diverse product and service offerings afford it about \$18 billion in annual revenue. The company's very impressive 64-year dividend increase streak lands it on the prestigious Dividend Kings list.

Emerson reported second quarter earnings on May 5th, 2021, with results coming in ahead of expectations on the top and bottom lines. Total sales were up 6% and organic sales were up 2%, which excludes favorable currency of 3% and an impact of acquisitions of 1%. Revenue beat the company's guidance, with strength seen across its segments. Americas improved against Q1 but was down -4% against last year's comparable quarter. Emerson continues to see sluggish demand in automation. Europe was up 7%, while AMEA was up 12%, which was driven by a massive 45% year-over-year recovery in China. Underlying orders were up 4% on a trailing-twelve-months basis.

Gross margin was 42.0%, down fractionally from the year-ago quarter due to business mix. Pretax margin was 16.6% of revenue, which was flat year-over-year; EBIT margin was also essentially flat at 17.5%. The company noted its ongoing cost savings project generated gains that were offset by unfavorable stock compensation plan costs, which was the result of awards given while the company's share price was trading at much lower levels during the pandemic.

Earnings-per-share equaled 93 cents in Q2, up 11% year-over-year. On an adjusted basis, earnings were 97 cents per share, a 9% gain year-over-year, as stronger volumes and cost reduction gains helped offset headwinds elsewhere.

We now see \$3.95 in earnings-per-share for this year following a good first half for Emerson, noting that cost saving actions and good volumes should overcome one-time costs, such as the company's stock compensation charges in Q2.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$3.24	\$2.67	\$3.54	\$3.75	\$3.17	\$2.46	\$2.54	\$3.46	\$3.71	\$3.46	\$3.95	\$5.04
DPS	\$1.38	\$1.60	\$1.66	\$1.72	\$1.88	\$1.90	\$1.92	\$1.94	\$1.96	\$2.00	\$2.02	\$2.34
Shares¹	739	724	707	697	655	643	642	641	632	601	600	500

The majority of Emerson's revenue is exposed to the oil and gas industry, where revenue and margins change significantly, introducing risk to forecasts. We're estimating growth at 5% as management has become less bullish, and as there are obvious signs of organic revenue growth weakness. We see the challenging environment for fiscal 2020 as indicative of longer-term demand issues that have been building for Emerson, even without the additional headwinds of COVID-19. We still think low single-digit growth in revenue and a small tailwind from the buyback will be the key drivers of earnings-per-share growth in the coming years, and we see Emerson as rebounding. We are now slightly more bullish following solid Q2 results.

Emerson Electric Company (EMR)

Updated May 9th, 2021 by Josh Arnold

The dividend is also expected to grow in the low single-digits as recent years have seen Emerson focus more on acquisitions and share repurchases than growing the dividend. Growth rates will likely be unimpressive as the company continues to focus on using its ample cash flow on acquisitions, not above average dividend growth.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	16.8	18.3	15.8	17.6	18.0	20.6	22.9	20.5	17.7	18.8	24.1	19.0
Avg. Yld.	2.5%	3.3%	3.0%	2.6%	3.3%	3.8%	3.3%	2.7%	3.0%	3.1%	2.1%	2.4%

Emerson's price-to-earnings ratio has increased significantly of late due to a rise in the stock. Emerson remains elevated at 24.1 times earnings, which is ahead of our estimate of fair value at 19. We are therefore forecasting a strong headwind from the valuation in the coming years. We see the yield as slightly rising over time, primarily from a lower valuation.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	42%	60%	46%	61%	60%	77%	75%	58%	53%	58%	51%	47%

Emerson's payout ratio is just over half of earnings, and we believe it will continue to drift lower over time as Emerson focuses on acquisitions instead of boosting the payout by large amounts. The dividend is very safe as it is well covered by free cash flow, and the yield is decent, so it is a suitable dividend stock.

Emerson's competitive advantage is in its many decades of experience in building customer relationships and engineering excellence. It has a global customer base that is seeing strong economic growth and that underlying sales tailwind should power results going forward. It is very susceptible to recessions given its oil and gas exposure, however, so any signs of economic weakness should put investors on alert, as we saw in 2020. We see first half 2021 results as supporting a recovery for Emerson.

Final Thoughts & Recommendation

With the increase in shares in recent weeks, Emerson appears overvalued. Our growth forecast, combined with shares at 127% of our estimate of fair value, and a lower dividend yield, means we are forecasting just 2.4% total annual returns in the coming years. We are reiterating Emerson at a hold rating, noting that its exceptional dividend provides some amount of safety, but could be offset by the higher valuation and what we see as near-term growth complications.
