## Overview & Current Events

Gladstone Capital is a business development company, or BDC, that primarily invests in small and medium businesses. These investments are made via a variety of equity (10% of portfolio) and debt instruments (90% of portfolio), generally with very high yields. Loan size is typically in the \$7 million to \$30 million range and has terms up to seven years. The BDC's stated purpose is to generate income it can distribute to its shareholders. The company trades with a market capitalization of \$358 million and it pays distributions monthly, instead of quarterly.

Gladstone reported second quarter earnings on May 4<sup>th</sup>, 2021, and the company missed expectations on both the top and bottom lines. The company invested \$72 million in three new portfolio companies, and after \$48 million in repayments, posted net new originations of \$24 million for the quarter. Secured first lien assets rose to 58% of the total portfolio and Gladstone maintained a weighted average yield on debt of 10.6%. Gladstone's debt and equity portfolios generated \$16 million of market appreciation in Q2. That helped drive a 9.6% increase in NAV from the end of the December quarter, and it stood at \$271 million at the end of Q2. On a per-share basis, NAV rose 6.6% to \$8.11.

Net investment income was up 1.9% over the prior quarter to \$6.4 million. Lower expenses helped improve margins for Gladstone, driving a net increase in assets of 65 cents per share.

With spreads improving due to rising rates, as well as falling expenses, we have added to our NII per share estimate for this year, which now stands at 83 cents.

## Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
<b>NII</b>	\$0.88	\$0.91	\$0.88	\$0.87	\$0.84	\$0.84	\$0.84	\$0.85	\$0.84	\$0.81	<b>\$0.83</b>	<b>\$0.83</b>
<b>DPS</b>	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.78	<b>\$0.78</b>	<b>\$0.78</b>
<b>Shares<sup>1</sup></b>	21.0	21.0	21.0	21.0	21.1	23.2	25.5	27.1	29.3	33.0	<b>35.0</b>	<b>42.0</b>

Gladstone reports net investment income per share, or NII, instead of earnings-per-share, which is consistent with other BDCs. On that measure, the company's results have been fairly lackluster in terms of growth over the past decade. Our estimate of 83 cents for this year is down from historical NII, but only slightly. Gladstone's share issuances have funded higher NII in dollar terms but haven't earned enough above its cost of capital to move the needle on NII-per-share. Given this history, we reiterate our estimate of Gladstone's long-term growth rate at 0%.

The yields on the company's portfolio influence its ability to earn income and therefore, cover its expenses and pay distributions to shareholders. Over time, the company's portfolio yield has drifted higher to nearly 11%, where it is today. However, higher expenses have offset that growth recently, which is part of the reason why NII-per-share continues to be flat over time. We note that Q2's expenses were lower, but this is an outlier. Gladstone's portfolio continues to grow in dollar terms, but given its offsetting rising expenses, and loan non-accruals, NII hasn't grown. We see this cycle of new investments being largely offset by losses and higher expenses.

Updated May 15<sup>th</sup>, 2021 by Josh Arnold

Gladstone's dividend had been at \$0.07 monthly, or \$0.84 annually, since 2010. However, the cut for Q2 of 2020 still has the annualized payout at \$0.78. We see this payout as covered by NII-per-share moving forward, but only just.

## Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/NII	10.7	9.2	10.1	10.9	10.0	9.1	11.4	10.7	10.8	10.2	<b>12.8</b>	<b>10.0</b>
Avg. Yld.	8.9%	10.1%	9.5%	8.8%	10.0%	11.0%	8.8%	9.3%	9.2%	9.4%	<b>7.3%</b>	<b>9.4%</b>

Gladstone has traded at a price-to-NII ratio very near 10 in the past decade, which is where we assess fair value. At 12.8 times NII, the stock appears to be overvalued. We therefore see a moderate headwind to total returns should the valuation normalize.

The yield is now lower than it has been for most of the past decade; Gladstone's average yield in the past decade has been close to 10%, and we see the yield rising slightly over time, closer to 10%. We see the yield as warning investors that Gladstone is overpriced today, a condition that has been exacerbated by a sustained rally of late.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	95%	92%	95%	97%	100%	100%	100%	99%	100%	96%	<b>94%</b>	<b>94%</b>

Gladstone doesn't have any competitive advantages as it operates in much the same way as any other BDC. It is also dependent upon funding costs and the spreads it can earn on its debt and equity investments. During recessions, Gladstone will likely struggle as repayments may become a problem for its debt investments. Indeed, this caused the company to cut its dividend during the Great Recession, and it hasn't recovered.

Gladstone cut its distribution for this reason in Q2 2020, and we believe the cut should be enough for the foreseeable future. NII appears to have stabilized and we see the payout as sustainable currently.

## Final Thoughts & Recommendation

We forecast 2.8% total annual returns in the coming years as Gladstone's yield provides all of the stock's projected returns, and then some. The stock continues to rally as the market is bidding up interest rate sensitive stocks. However, Gladstone's fundamentals don't appear to have improved materially. Given this, we are reiterating Gladstone at a sell rating, primarily due to valuation.
