Overview & Current Events

Royal Dutch Shell is an oil and gas supermajor, the second largest behind Exxon Mobil in terms of annual production volumes. Shell is currently valued at \$144 billion, also ranking second among oil companies behind Exxon Mobil by that measure. Shell is headquartered in London (UK) as well as in Den Haag (Netherlands). There are two types of shares of the company; RDS.A shares, listed in the Netherlands, and RDS.B shares, listed in the United Kingdom.

In late April, Royal Dutch Shell reported (4/29/21) financial results for the first quarter of fiscal 2021. The company recovered strongly from the pandemic thanks to a 50% increase in its average realized oil price, which resulted from the aggressive production cuts of OPEC and Russia. It also enjoyed a 25% increase in its average realized gas price. As a result, Shell switched from a loss per share of -\$1.04 in the fourth quarter to a profit per share of \$1.44 and exceeded the analysts' consensus by an impressive \$0.53. We have thus raised our earnings-per-share forecast for this year from \$2.50 to \$4.30.

In late March-2020, Shell stated that its dividend was safe but a month later it cut its quarterly dividend by -66%. It was the first time that Shell cut its dividend since World War II. The misleading stance of the CEO and the new dividend yield (3.7%) are certainly disappointing. Notably Shell has raised its dividend by 4% twice since then but we do not applaud the choppy dividend policy of management.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$8.67	\$8.48	\$5.20	\$4.72	\$0.60	\$1.16	\$3.84	\$5.16	\$4.08	\$1.24	\$4.30	\$4.98
DPS	\$3.36	\$3.42	\$3.56	\$3.72	\$3.76	\$3.76	\$3.76	\$3.76	\$3.76	\$1.91	\$1.37	\$1.89
Shares¹	3,110	3,150	3,150	3,150	3,200	4,070	4,170	4,170	4,029	3,892	3,890	3,800

The earnings-per-share numbers in the above table do not look enticing. From 2011's levels, earnings-per-share declined continuously until hitting an inflection point in 2015. Since then they recovered but they plunged again last year due to the pandemic. When oil prices were around their lows, in 2015, Shell acquired BG Group, a deep-water oil and natural gas focused upstream company, in a \$53 billion deal that was criticized by many at the time. Shell grew its output considerably thanks to that acquisition, but its output has stalled in the last four years. This is in sharp contrast to the other oil majors, such as Chevron, BP and Total, which have grown their production at a fast clip in recent years. The stagnation of Shell has resulted from the natural decline of its fields and its extensive asset divestments, which helped fund the expensive acquisition. These two factors have also caused the duration of the reserves of Shell to fall for six years in a row and reach 7.9 years, which is much shorter than the average duration of the peer group (~11 years).

Moreover, a few months ago, Shell announced a major transformation plan, which involves a transition from oil and gas to renewable energy sources. The company will transform its refining portfolio from 14 sites to 6 energy and chemicals parks and will reduce its upstream portfolio to 9 core positions, which will generate more than 80% of the cash flows of the upstream segment. It also expects to produce ~75% of its proved reserves until 2030. This historic transition has greatly increased the uncertainty over future results, as the new business will probably have lower margins. On the

¹ In millions.

Royal Dutch Shell plc (RDS.B)

Updated May 12th, 2021 by Aristofanis Papadatos

bright side, Shell has drastically reduced its operating expenses in recent years and has invested in high-quality, low-cost reserves, which have rendered the company more profitable at a given oil price. We expect the pandemic to subside later this year and Shell to grow its earnings-per-share at a 3.0% average annual rate over the next five years.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	8.1	8.4	13.3	16.7	52	44	18.6	11.6	15.1	27.7	8.6	12.0
Avg. Yld.	4.8%	5.1%	5.1%	4.7%	6.5%	7.4%	6.4%	6.2%	6.1%	5.6%	3.7%	3.2%

Shell's valuation has moved in a very wide range throughout the last decade, which can be explained by the big movements in the company's net profits. The stock is currently trading at a price-to-earnings ratio of 8.6. This valuation level is higher than our assumed fair earnings multiple of 12.0. If the stock reverts to our fair valuation level over the next five years, it will enjoy a 6.9% annualized gain in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	38.8%	40.3%	68.5%	78.8%	62.7%	32.4%	97.9%	72.9%	92.2%	15.4%	31.9%	38.0%

In contrast to Exxon Mobil and Chevron, which are Dividend Aristocrats, Shell froze its dividend for five years and cut its dividend last year, for the first time since World War II. Shell exceeded Exxon in annual operating cash flows in 2017 for the first time in about 20 years and has maintained its top position in the last three years. Moreover, it can endure the ongoing downturn caused by the pandemic. Its earnings slumped last year but the oil giant is recovering this year.

Final Thoughts & Recommendation

Shell plunged near its 20-year lows last year, primarily due to the pandemic. In addition, Shell cut its dividend for the first time in 75 years. The stock has rallied 65% in about seven months thanks to the enthusiasm of the market over the massive vaccination program underway, but we believe that the stock could still offer a 13.0% average annual return over the next five years, mostly thanks to its still cheap valuation. We thus maintain our buy rating.
