Overview & Current Events

Oracle is an information technology company that provides software, hardware, and services. Its offerings include applications, platforms, and infrastructure technologies (cloud software), hardware products such as servers, hardware-related software products (e.g., operating systems) and services such as consultation & education. Oracle was founded in 1977, is headquartered in Redwood City, CA.

Oracle reported its most recent quarterly results, for its fiscal fourth quarter, on June 15. The company announced that it generated revenues of \$11.2 billion during the quarter, which represents an increase of 8% versus the prior year's quarter. This was more than what the analyst community forecasted, as the consensus estimate was beaten by \$190 million. Most of Oracle's revenues were generated in the Cloud segment, which contributed roughly three-quarters to Oracle's top line during the quarter. As expected, customer purchases that were pushed back a couple of quarters ago showed up in the current quarter, a trend that will likely remain in place.

Oracle generated earnings-per-share of \$1.54 during the fourth quarter, which represents an attractive growth rate of 29% versus the prior year's quarter, which beat the consensus estimate easily. Oracle has managed to grow its profits at an attractive pace in recent quarters, even though the company did not generate a lot of revenue growth during most of those quarters. This was possible thanks to a combination of cost savings and share repurchases. During fiscal 2021, Oracle generated earnings-per-share of \$4.67, which was well above the level seen in previous years, and which set a new record for the company. It is expected that earnings-per-share will be relatively flat in fiscal 2022, however.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$2.46	\$2.68	\$2.87	\$2.77	\$2.61	\$2.74	\$3.05	\$3.52	\$3.85	\$4.67	\$4.65	\$6.83
DPS	\$0.24	\$0.30	\$0.48	\$0.51	\$0.60	\$0.64	\$0.76	\$0.81	\$0.96	\$1.04	\$1.28	\$1.80
Shares¹	4.91	4.65	4.46	4.34	4.13	4.14	4.05	3.50	3.10	2.90	2.70	2.20

Oracle recorded very compelling growth rates in the 2010-2014 time frame, but profits peaked in that year, and in the following years Oracle did not manage to grow its earnings-per-share further. This period was when Oracle had to refocus its operations, as the whole software industry was moving towards the megatrend of cloud computing. It looks like Oracle has successfully managed to direct its operations towards the cloud, as earnings growth has accelerated again starting in 2018, while earnings-per-share hit a new record level during fiscal 2020, before the pandemic, while fiscal 2021 was even better, as Oracle did not feel any meaningful impact from the pandemic.

Oracle is not operating a cloud business as large as its peers Amazon or Microsoft, but it could still become a key player in this market in the foreseeable future. Infrastructure-as-a-Service, as well as Platform-as-a-Service, are markets that are growing at a fast pace, and Oracle's CEO has pointed out that the underlying growth rate for Oracle's IaaS and PaaS offerings has been highly attractive, at 30%+, in the recent past. Oracle Fusion ERP and Oracle's Autonomous Database are touted by management as future growth drivers due to compelling pricing and top-tier technology. Oracle is also positively impacted by rising margins, as the company managed to reduce its cost basis relative to the revenues that the

company generates. Despite a high number of new shares being issued to employees and management, Oracle's share count has been declining in the past thanks to many billions of dollars that Oracle spends on share repurchases.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	12.0	12.0	12.5	15.1	14.8	15.0	15.4	14.5	13.8	16.9	16.6	15.0
Avg. Yld.	0.8%	0.9%	1.3%	1.2%	1.6%	1.6%	1.5%	1.9%	1.8%	1.3%	1.7%	1.8%

Oracle's share price is up quite a lot over the last year, and shares are now trading above our fair value estimate. We would deem Oracle's shares fairly valued when they traded at 15 times net profits, but shares are about 10% more expensive today. We believe that multiple changes will result in a small headwind to total returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	9.8%	11.2%	16.7%	18.4%	23.0%	23.4%	24.9%	22.8%	24.9%	22.3%	27.5%	26.3%

Oracle's dividend payout ratio was extremely low a decade ago, but since then the payout ratio has risen relatively consistently. At a payout ratio of less than 30%, the dividend is very manageable, and there is still a lot of room for further dividend increases. Due to the low payout ratio and the fact that the company was not impacted to a large degree during the last financial crisis, Oracle's dividend is rated very safe.

Oracle was not hurt during the last recession, and the coronavirus pandemic does not have a large impact on Oracle's business, either. Oracle has some size and scale advantages over smaller peers, although it is itself a smaller player versus peers such as Microsoft in the cloud computing industry. Thanks to strong market-wide growth rates, all companies in this field can grow at the same time, which eases competitive pressures.

Final Thoughts & Recommendation

Oracle's shift towards cloud computing continues. Revenues have not been much of a growth tailwind in recent quarters, but thanks to strong cost controls and buybacks Oracle's earnings-per-share continue to rise at a compelling pace. Oracle hit a new record profit in 2021, showcasing that the pandemic is not a threat for the company. Right now, shares trade above our fair value estimate, and we rate the stock a hold for now.
