Overview & Current Events

Sabine Royalty Trust (SBR) is an oil and gas trust set up in 1983 by Sabine Corporation. At initiation, the trust had an expected reserve life of 9 to 10 years; the current estimated life of the trust is 8 to 10 years. The trust consists of royalty and mineral interests in producing properties and proved oil and gas properties in Florida, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas. It is roughly 2/3 oil and 1/3 gas in terms of revenues. The trust's assets are static in that no further properties can be added. The trust has no operations but is merely a pass-through vehicle for royalties. SBR had royalty income of \$36.3 million in 2020 and has a current market cap of \$564 million.

In mid-August, SBR reported (8/12/21) financial results for the second quarter of fiscal 2021. Production of oil and gas decreased -21% and -4%, respectively, over last year's quarter. However, the average realized price of gas doubled and the average realized price of oil grew 29% thanks to the ongoing recovery from the pandemic. As a result, distributable cash flow per unit grew 30%, from \$0.64 to \$0.83. The price of oil has rallied to pre-COVID levels this year thanks to the rollout of vaccines and the unprecedented production cuts implemented by OPEC and Russia. The cash flow of SBR, which lags the trends in oil prices, has finally caught up with the uptrend. SBR has distributed \$1.91 per unit in the first eight months of the year. Given the sustained favorable oil and gas prices, we have raised our forecast for annual distributable cash flow per unit from \$2.40 to \$2.95.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
DCFU	\$4.02	\$3.59	\$4.03	\$4.03	\$3.15	\$1.88	\$2.38	\$3.42	\$3.02	\$2.28	\$2.95	\$3.26
DPU	\$3.97	\$3.70	\$3.92	\$4.10	\$3.11	\$1.93	\$2.37	\$3.35	\$3.02	\$2.40	\$2.95	\$3.26
Units¹	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6

The trust does not have earnings per se, but rather is a pass-through vehicle for royalty payments – essentially all the royalty income (cash) it receives is passed through to unit holders. About 5%-8% of royalty income is consumed in administrative expenses. The trust has generated an average annual distributable cash flow of \$3.18 per unit over the last decade. However, the cash flows of SBR are extremely sensitive to the gyrations of the prices of oil and gas and hence they have resulted in a markedly volatile performance record. Given the rally of the prices of oil and gas this year, which have formed a high comparison base, we expect 2.0% average annual growth of distributable cash flow per unit over the next five years.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
P/DCFU	15.3	14.3	11.2	10.7	9.9	16.3	16.7	12.0	14.6	13.4	13.2	10.0
Avg. Yld.	6.5%	7.2%	8.7%	9.5%	10.0%	6.3%	5.9%	8.2%	6.8%	7.9%	7.6%	10.0%

SBR has traded at an average price-to-distributable cash flow ratio of 13.4 over the last decade. However, this average multiple seems quite high given the risk of a royalty trust. It is critical to note that the trust has a limited lifetime and

hence its returns will be greatly affected by the commodity prices that will prevail throughout this period. When the music begins to slow down on one of these trusts (i.e., the end of reserves comes into view) or the market gets the slightest hint that the music will slow, the price of a unit often plummets. As a result, investors should pay extra attention to the valuation of SBR before investing in it. We assume a fair DCFU multiple of 10.0 for SBR. If the stock reaches our fair value estimate over the next five years, it will incur a -5.4% annualized drag in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	99%	103%	97%	102%	99%	103%	100%	98%	100%	105%	100%	100%

On the positive side, the trust has been in continuous existence for 38 years paying a 10-year average yield of 7.7%, albeit with considerable volatility in the distributions. Considering that the initial expected life was just 10 years, this longevity is certainly impressive. We also note that the proved developed reserves of oil and gas of SBR have grown 4% and 16%, respectively, since the end of 2017. For some investors, there may be tax advantages resulting from passed-through depletion allowances. However, it is critical to note the pronounced vulnerability of SBR to a downturn in the energy sector, partly due to its limited time horizon. If the pandemic takes a turn for the worse, it will greatly hurt the returns of SBR. Overall, while the 7.6% dividend yield may entice some income-oriented investors, we believe that the trust is not suitable for most of them due to its huge downside risk in the event of a prolonged downturn.

Final Thoughts & Recommendation

SBR faced a severe downturn in 2020 due to the pandemic. However, the pandemic has begun to subside and thus it has greatly benefited SBR. On the other hand, SBR has rallied 50% in about ten months. As a result, it could offer just a 4.3% average annual return over the next five years. This return does not fully compensate investors for the high vulnerability of the trust to the swings of oil and gas prices and the risk that results from the limited time horizon of the trust. We maintain our hold rating.
