## Overview & Current Events

On June 12<sup>th</sup>, 2021, Total SA (TOT) changed its name to TotalEnergies SE (TTE) to emphasize its efforts to transform in the changing energy landscape. TotalEnergies is the fourth-largest oil and gas company in the world based on its market capitalization of \$117.9 billion. Like the other oil and gas super majors, it is a fully integrated company. TotalEnergies operates in four segments: upstream, downstream (mostly refining), marketing & services and gas, renewables & power. In late July, TotalEnergies reported (7/29/21) financial results for the second quarter of fiscal 2021. The company reduced its production by -4% due to maintenance activity. On the other hand, oil prices grew 13% sequentially thanks to the production cuts of OPEC+ and gas prices rose 28% thanks to the recovery from the pandemic. As a result, TotalEnergies grew its earnings-per-share 15% sequentially, from \$1.10 to \$1.27. That level exceeded the pre-pandemic second quarter of 2019.

We reiterate that TotalEnergies is the most defensive oil major during downturns thanks to its integrated business model. Its Gas, Renewables & Power and Marketing segments incurred just a -26% decline in their earnings in 2020 and thus they provided a strong buffer to the results of the company amid an unprecedented downturn. The oil major has repeatedly stated that its dividend is sustainable at Brent prices around \$40 and its breakeven oil price is below \$25. This is in sharp contrast to Royal Dutch Shell and BP, which cut their dividends in 2020.

## Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
<b>EPS</b>	\$7.05	\$7.01	\$6.28	\$5.63	\$2.19	\$2.52	\$4.12	\$5.05	\$4.38	\$1.43	<b>\$4.50</b>	<b>\$5.22</b>
<b>DPS</b>	\$3.11	\$2.98	\$3.13	\$3.16	\$2.73	\$2.72	\$2.72	\$2.87	\$2.90	\$3.02	<b>\$3.10</b>	<b>\$3.26</b>
<b>Shares<sup>2</sup></b>	2254.2	2257.5	2268.5	2275.9	2336.1	2419.8	2520.6	2637	2618	2645	<b>2660</b>	<b>2600</b>

Like most of its peers, TotalEnergies failed to grow its production during 2010-2014. However, the company has returned to a solid growth trajectory. It grew its output 8% in 2018 and 9% in 2019. Due to the pandemic and the resultant OPEC production cuts, TotalEnergies reduced its output by -5% in 2020. However, the energy market has already begun to recover from the pandemic. Moreover, TotalEnergies is ideally positioned to endure the downturn thanks to its integrated business model and its healthy balance sheet. We expect the oil major to grow its earnings-per-share by 3.0% per year on average over the next five years.

## Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026

# TotalEnergies SE (TTE)

Updated August 17<sup>th</sup>, 2021 by Aristofanis Papadatos

TotalEnergies is currently trading at a price-to-earnings ratio of 9.8. This earnings multiple is lower than its 10-year average of 12.8. TotalEnergies has historically traded for a price-to-earnings ratio of 10 or lower during periods of high oil prices. We assume a price-to-earnings ratio of 12.0 as a reasonable approximation of 'fair value' for TotalEnergies. If the stock reverts to its fair valuation over the next five years, it will enjoy a 4.2% annualized gain.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	44.1%	42.5%	49.8%	56.1%	125%	108%	81.0%	56.8%	66.2%	211%	<b>68.9%</b>	<b>62.5%</b>

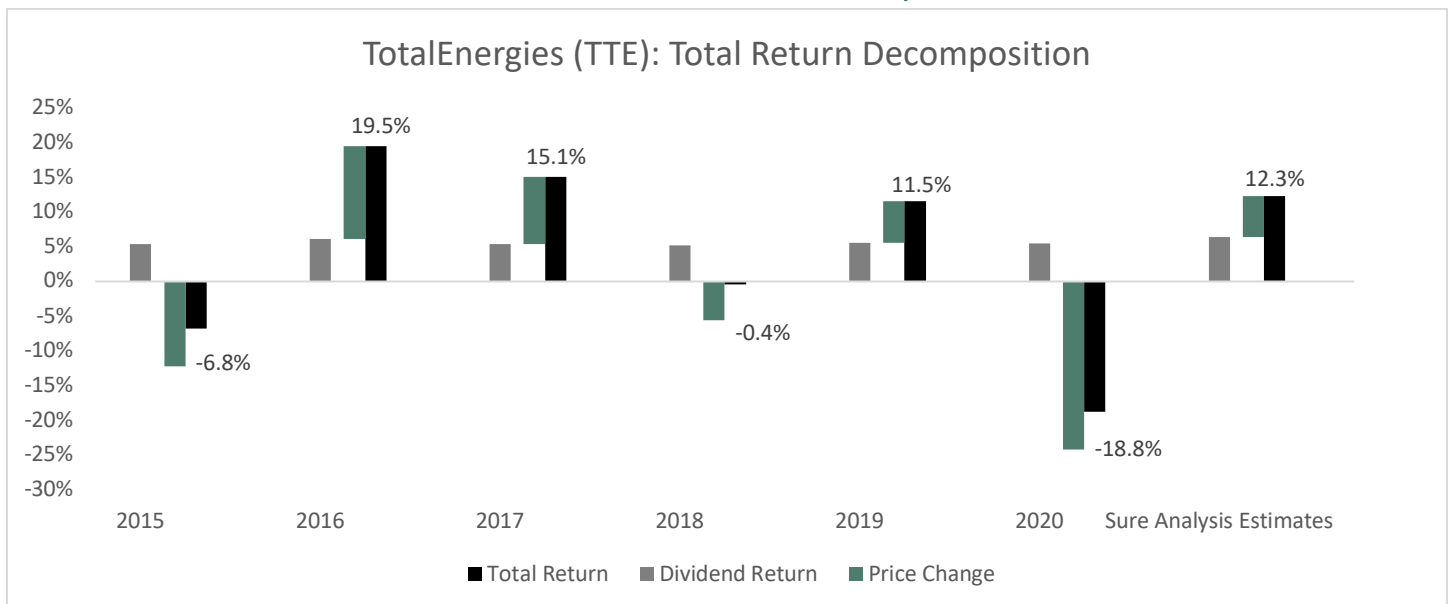

TotalEnergies exhibited much better performance than its peers during the 3-year downturn of the oil market that began in 2014. During this period, in which the price of oil fell up to -70%, the earnings-per-share of TotalEnergies fell only -49% whereas those of Exxon Mobil fell -75% and Chevron and BP posted losses in 2016. The key behind the resilience of TotalEnergies was its superior refining segment. During the rough years of refining (2008-2013), upstream segments were generating ~90% of the total earnings of all the oil majors. Consequently, the other oil majors sold many of their refineries during that period, which were hedges against a fall of the price of oil. TotalEnergies maintained almost all its refineries and hence it reaped the full benefit from high refining margins in 2014-2019.

TotalEnergies has another competitive advantage when compared to its American peers. It produces only a minor portion (less than 10%) of its natural gas in the U.S. and hence its average selling price of gas is much higher than the price of Henry Hub. Moreover, while all the oil producers drastically cut their production costs during the recent downturn, TotalEnergies managed to reduce this cost to 5.5 \$/bbl, which is nearly half of the production cost of most of its peers. Overall, TotalEnergies is the most resilient oil major during downturns or periods of suppressed oil prices.

## Final Thoughts & Recommendation

TotalEnergies is the most resilient oil major to the pandemic and is on track to enjoy a strong recovery this year thanks to the massive distribution of vaccines. The stock has rallied 50% in about ten months, but it could still offer a 12.3% average annual return over the next five years. The stock is suitable, not only for growth-oriented investors, but also for income-oriented investors. We thus maintain our buy rating.
