Overview & Current Events

McDonald's, founded in 1940 and headquartered in Chicago IL, is the world's leading global foodservice retailer with nearly 40,000 locations in over 100 countries. Approximately 93% of the stores are independently owned and operated. The \$181 billion market cap company has raised its dividend every year since paying its first dividend in 1976, qualifying the company as a Dividend Aristocrat.

On September 23rd, 2021, McDonald's declared a \$1.38 quarterly dividend, marking a 7.0% year-over-year increase.

On October 27th, 2021, McDonald's reported Q3 2021 results for the period ending September 30th, 2021. For the quarter, total revenue came in at \$6.20 billion, a 14% increase compared to Q3 2020. Revenue growth was strong in both company-operated restaurants and franchised restaurants, which have notably higher margins. Net income equaled \$2.15 billion or \$2.86 per share compared to \$1.76 billion or \$2.35 per share in the year ago quarter. On an adjusted basis, earnings-per-share equaled \$2.76 versus \$2.22 prior. In the first nine months of the year McDonald's has generated adjusted earnings-per-share of \$7.05 versus \$4.35 in 2020.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$5.27	\$5.36	\$5.55	\$4.82	\$4.97	\$5.71	\$6.66	\$7.90	\$7.84	\$6.05	\$9.30	\$12.45
DPS	\$2.53	\$2.87	\$3.12	\$3.28	\$3.44	\$3.61	\$3.83	\$4.19	\$4.73	\$5.04	\$5.52	\$7.39
Shares¹	1,021	1,003	990	963	907	819	794	767	746	750	745	690

McDonald's has a long and successful growth history when it comes to both earnings-per-share and dividends. In the 2008 through 2019 period earnings-per-share compounded at an average rate of 7.1% per annum. During that time the company did encounter some headwinds, though, as profits dropped in 2014. McDonald's found ways to reignite growth during the following years, which included driving comparable sales by offering all day breakfast at its restaurants and expanding the menu through healthier offerings. Another big strategic shift was McDonald's decision to rebrand many of its restaurants. The company generates lower revenue now (sales peaked at \$28 billion in 2013) but its costs have come down to more than offset this top-line change. McDonald's has turned itself into an asset-light, low-cost company that collects franchise fees from a larger number of total restaurants.

This strategy has been successful, as earnings-per-share had grown at a strong pace. McDonald's continues to perform better than many of its peers when it comes to generating rising revenues from existing restaurants, and there is potential for McDonald's to open new restaurants in international markets throughout the next couple of years. Earnings-per-share growth could be driven by higher franchising fees, declining operating costs, and the impact of share repurchases, which have lowered the company's share count considerably over the years.

Of course, 2020 was a down year amidst the global pandemic, showing some vulnerability. Still, earnings are expected to snap back materially in 2021 and we are forecasting 6% annual growth over the intermediate term from this point.

¹ In millions.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	15.9	17.3	17.5	20.0	20.2	21.1	22.3	21.1	25.2	33.2	26.1	20.0
Avg. Yld.	3.0%	3.1%	3.2%	3.4%	3.4%	3.0%	2.6%	2.5%	2.4%	2.5%	2.3%	3.0%

Over the past decade shares of McDonald's have traded hands with an average P/E ratio of 21 times earnings. We consider 20 times earnings as a reasonable starting place, taking into consideration the slightly reduced growth expectations and a very solid business model. This valuation could be too conservative if growth continues to accelerate, but this has been somewhat typical of the security's past. With shares trading at 26 times our expected earnings, this implies the potential for a notable valuation headwind in the years to come.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	48%	52%	56%	68%	69%	63%	58%	53%	60%	83%	59%	59%

McDonald's dividend payout ratio has been oscillating in a range of ~50% to ~70% throughout the last decade. Due to the stability of McDonald's during past recessions, coupled with a payout ratio that is not overly high, we view McDonald's dividend as safe; the most recent 7.0% dividend increase being a good example of this.

McDonald's competitive advantage lies in its global scale, immense network of restaurants, well-known brand and real estate assets. Indeed, the company's superior track record against numerous competitors has illustrated why these aspects are important to the company's success. During the last recession McDonald's posted excellent results, with earnings-per-share of \$2.91, \$3.67, \$3.98 and \$4.60 over the 2007 through 2010 stretch, while the dividend kept on increasing to boot. During this crisis, 2020 was a down year, but results are set to bounce back.

Final Thoughts & Recommendation

Shares are up 10% since our November 2020 report. McDonald's has a very successful history of generating earnings-per-share and dividend growth. That being said, today's valuation is not compelling in our view. Total return potential comes in at 3.0% per annum, as 6% growth and a 2.3% dividend yield could be offset by a valuation headwind. While we believe the business is excellent, the valuation leaves a bit to be desired. Shares earn a hold rating.
