Overview & Current Events

Mercury General is an insurance company that is active in the following businesses: automobile, homeowners, renters & business insurance. Mercury was founded more than 50 years ago, in 1961. Personal automobile insurance is the most important business unit for Mercury General. The company is active in eleven states, with California being the most important market. Insurance is primarily sold through about 10,000 independent agents.

Mercury General reported its third quarter earnings results on November 2. The company reported net premiums earned of \$940 million for the quarter, which was down 6% compared to the previous year's period. Net premiums written rose by 7% year over year, to \$1.01 billion. The fact that net written premiums were up year over year will likely mean that earned premiums should see some growth during coming quarters. Mercury General's investment income and investment gains were flat year over year, coming in at a solid level of \$32 million. Mercury General's average annual yield on its investments declined slightly to 2.4%, compared to 2.7% during the previous year's quarter.

Mercury General's adjusted earnings-per-share totaled \$0.64 during the third quarter, missing the analyst consensus estimate. This can be attributed to higher-than-average catastrophe losses, e.g. due to Hurricane Ida. The coronavirus hasn't had a meaningful impact on Mercury General's profitability, however. 2020 was a strong year for Mercury, as earnings-per-share were higher than during all previous years, at \$5.54, but it is expected that 2021 will be a weaker year again. Mercury General has raised its dividend by 0.4% in early November, to \$0.635 per quarter.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$2.79	\$2.13	\$2.18	\$2.28	\$2.34	\$1.73	\$1.64	\$1.80	\$2.60	\$5.54	\$3.50	\$3.77
DPS	\$2.41	\$2.44	\$2.45	\$2.46	\$2.47	\$2.48	\$2.49	\$2.50	\$2.51	\$2.52	\$2.54	\$2.60
Shares¹	54.9	54.9	55.0	55.1	55.2	55.3	55.3	55.3	55.3	55.4	55.5	56.0

Mercury's growth history is relatively weak. From 2009 to 2018 the company's earnings-per-share declined. 2016 and 2017 were two especially harsh years, primarily due to unusually high costs for catastrophes such as the California wildfires during the summer of 2017. During 2019 Mercury's earnings-per-share recovered, however, due to lower catastrophe losses, but profits remained below the level that was hit in 2011, almost a decade earlier.

2019 had been a solid year for Mercury, but profits during 2020 rose to a way higher level, partially due to below-average catastrophe losses. The pandemic did not negatively impact the company's results during 2020, and the same can be expected for the current year, but higher losses for Mercury's ordinary business are expected for this year.

In the future, the company should be able to grow its profits slightly, we believe, although there likely will be big swings on a year-over-year basis, as there have been major changes in its profitability in the past. These cyclical results, caused by one-time impacts such as wildfires or hurricanes are not unusual for insurance companies with a regional focus, and they are something investors have to live with when they want to invest into Mercury General. These are not tied to the underlying strength of the economy, however, which is why Mercury's cyclical nature is not tied to recessions.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	14.5	19.6	20.1	21.5	23.1	30.8	35.0	28.9	18.8	9.2	15.1	15.0
Avg. Yld.	6.0%	5.8%	5.6%	5.0%	4.6%	4.7%	4.4%	5.1%	5.1%	5.0%	4.8%	4.6%

Mercury General's shares traded at quite high valuations throughout the last couple of years, with the company's price-to-earnings ratio being above 20 between 2013 and 2018. This was mostly due to the below-average profitability during those years. Based on current earnings forecasts for 2021, Mercury's shares trade in line with our fair value estimate.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	86.4%	115%	112%	108%	106%	143%	152%	139%	96.5%	45.5%	72.6%	69.1%

Mercury General has paid out more than 100% of its reported net earnings throughout most of the last decade. The company nevertheless managed to increase its dividend payout throughout the years, although the dividend growth rate was quite low in recent years, at less than 1% annually. Mercury General has been able to finance its dividend thanks to cash flows that are higher than the net profits that the company generates.

During the last financial crisis Mercury remained profitable, which can be explained by two key factors. First, even during times when the economy is weak, people still need insurance for their cars, property, and other belongings. Demand for Mercury's offerings is thus not overly dependent upon the economy. Second, Mercury did not invest in high-risk assets prior to the financial crisis, and therefore was able to avoid the huge losses many other financial corporations had to report. Mercury overall is recession-proof, which is a plus. But the company is significantly more impacted by catastrophes that affect its operations directly, such as 2017's huge California wildfires.

Final Thoughts & Recommendation

Unlike most of its peers from the financial industry, Mercury General was relatively resilient during the last financial crisis. Mercury General's earnings growth has been very inconsistent, however, and even though 2020 was a strong year, 2021 looks like it will be a weaker year again. Unforeseen catastrophes such as wildfires can impact results to a large degree. Due to unconvincing expected returns, we rate Mercury General a hold at the current level.
