Overview & Current Events

MetLife is one of the world's leading financial services companies, providing insurance, annuities, employee benefits and asset management to help its individual and institutional customers. Founded in 1868 as Metropolitan Life, today the \$55 billion MetLife has operations in more than 40 countries and holds leading positions in the U.S., Japan, Latin America, Asia, Europe and the Middle East, with about half of profits generated in the U.S.

On April 27th, 2021, MetLife announced a \$0.48 quarterly dividend, representing a 4.3% year-over-year increase.

On November 3rd, 2021, MetLife released Q3 2021 results for the period ending September 30th, 2021. For the quarter the company reported revenue of \$16.905 billion, a 5.6% increase compared to Q3 2020, as lower premiums were more than offset by an increase in net investment income. Adjusted earnings equaled \$2.062 billion or \$2.39 per share compared to \$1.578 billion or \$1.73 per share in Q3 2020.

MetLife's adjusted book value per share equaled \$57.29 versus \$53.10 in the year ago period.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$4.45	\$5.28	\$5.63	\$5.74	\$4.86	\$4.59	\$3.92	\$5.39	\$6.11	\$6.16	\$8.50	\$8.93
DPS	\$0.74	\$0.74	\$1.01	\$1.33	\$1.48	\$1.58	\$1.60	\$1.66	\$1.74	\$1.82	\$1.92	\$2.34
Shares¹	1,058	1,092	1,122	1,132	1,098	1,096	1,044	959	915	893	860	770

MetLife has put together a reasonable, but unspectacular earnings record in the last decade. From 2010 through 2020 earnings-per-share grew by an average compound rate of 3.5% per annum. Moreover, there were many instances of year-over-year declines. The company benefited from a much lower tax rate in 2018 and held up well in 2020.

Above average growth is generally not expected in the insurance business, as competition is fierce, and the products being offered are commodity-like in nature. Further, Insurers can get in trouble by "chasing" growth if it means underpricing policies to gain share. The liabilities are not known for years, meaning that you can grow quickly in the short-term, but be worse off for it in the long-term. Our preference is a slow and steady approach, and our expectation is 1% intermediate term growth, coming off a high base for 2021.

MetLife does have a few growth avenues in the way of general economic growth, international operations boosting its growth profile, and rising interest rates should they eventually come about. Additionally, share repurchases make sense given the below average valuation. Last year's results were a great example of this, with company-wide profit declining, but earnings-per-share increasing due to the lower share count. That being said, lower interest rates could weigh on results in the short-term.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026

MetLife Inc. (MET)

Updated November 10th, 2021, by Eli Inkrot

Over the past decade shares of MetLife have traded hands with an average P/E ratio of around 9 times earnings. We believe this is a reasonable starting place, considering the conservative growth profile of the firm coupled with a typical valuation in the industry. With shares trading at 7.5 times expected earnings this implies a valuation tailwind.

MetLife's dividend should add nicely to shareholder returns as well, given the 3.0% yield and runway for future growth. Note that MetLife held its dividend steady from 2007 through 2012 and recently held the payment at \$0.40 for eight quarters in 2016 through 2018, before it bumped it up 5% in 2018, 4.8% in 2019, 4.5% in 2020 and 4.3% in 2021. Future dividend growth may be lumpy, but we do anticipate year-over-year increases from this point.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	17%	14%	18%	23%	30%	34%	41%	31%	28%	30%	23%	26%

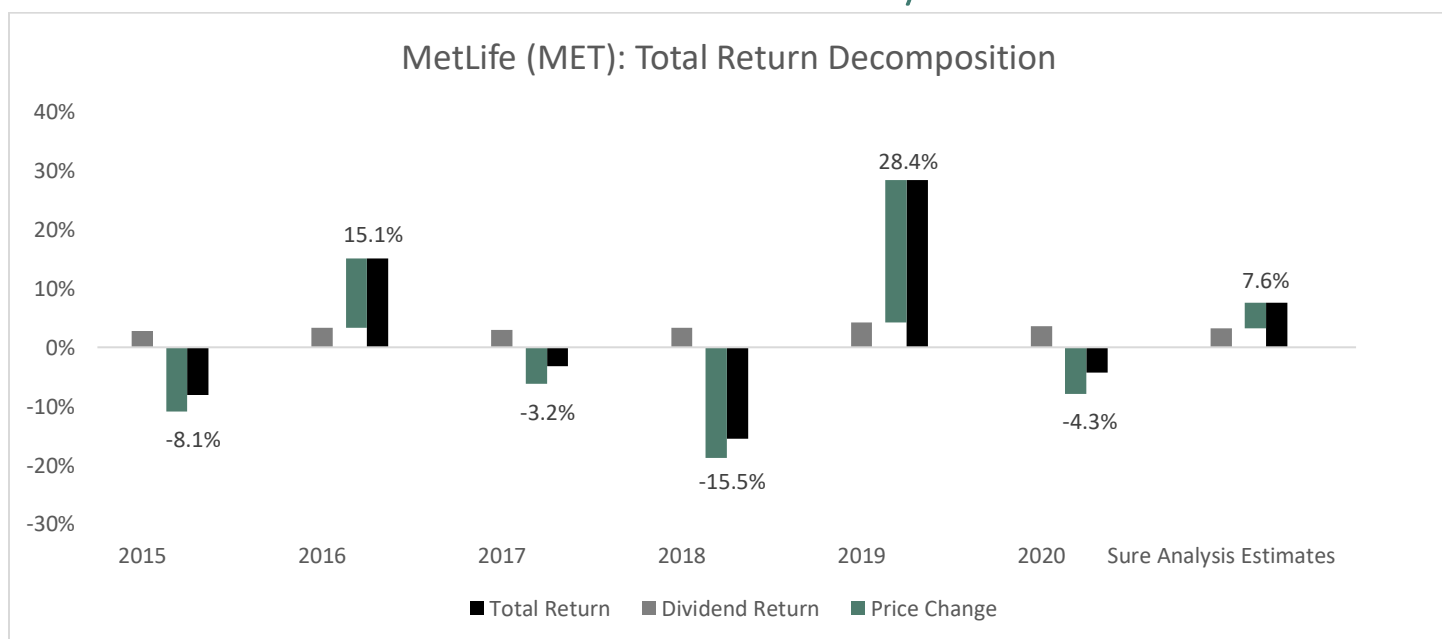

MetLife's industry does not typically exhibit competitive advantages as the products are commodity-like in nature. Consumers are not willing to pay a material premium to get the same policy. That being said, MetLife's long tradition and experience in the industry, along with a proven track record of intelligent, slow growth is encouraging. During the last recession MetLife posted earnings-per-share of \$3.67, \$2.87 and \$4.38 during the 2008 through 2010 stretch. In addition, the dividend was held steady during this time. We believe this typifies what an investor might expect when the next recession comes along – a hit to short-term earnings, but the ability to bounce back and keep paying the dividend. The current crisis has tested this thesis and so far, MetLife is performing well.

We believe MetLife's historical dividend payout ratio management has been prudent – freezing the dividend in lesser times and accelerating growth when there is ample room to do so.

Final Thoughts & Recommendation

Shares are up 51% in the last year. MetLife is not the type of security that is going to “wow” you when it comes to growth prospects. Indeed, it's in an industry where it can be intelligent to stick to prudent underwriting and let your competitors underprice you. We are forecasting 7.6% annual total return potential stemming from 1% intermediate-term growth, a 3.0% starting dividend yield and the potential for a valuation tailwind. Shares earn a hold rating.
