Overview & Current Events

ConocoPhillips is the world's largest independent oil and gas producer, with a production of 1.6 million barrels per day and a market capitalization of \$119.6 billion. The company was founded in 2002 and is headquartered in Houston, Texas. On January 15th, 2021, ConocoPhillips closed the acquisition of Concho Resources for \$9.7 billion in an all-stock deal. This was the largest shale oil deal in 2020. ConocoPhillips pursued this deal thanks to the low production cost of Concho and the high rate of return of this deal.

On September 21st, 2021, ConocoPhillips announced its agreement to buy Shell's Permian Basin assets for \$9.5 billion in cash. The deal will increase the Permian output of ConocoPhillips by 40% and will result in great synergies, as the company will become the second-largest producer in the Permian, behind only Pioneer Natural Resources (PXD).

In early February, ConocoPhillips reported (2/3/22) financial results for the fourth quarter of fiscal 2021. As ConocoPhillips is a pure upstream company that does not hedge its output, it greatly benefited from the rally of the oil price, which resulted from the recovery from the pandemic and the tight supply from OPEC and Russia. The average realized oil price doubled over the prior year's quarter, from \$33 to \$66, and thus the company switched from an adjusted loss per share of -\$0.19 to an adjusted profit per share of \$2.27. The oil price has rallied further this year, to an 8-year high, as oil producers are reluctant to boost their output due to their concerns over the secular shift of the world from fossil fuels to clean energy sources. We thus expect record earnings this year. On the other hand, we expect oil producers to boost their output at some point and thus drive the oil price lower.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$5.91	\$6.43	\$4.96	-\$1.39	-\$2.52	\$0.61	\$4.54	\$3.59	-\$0.97	\$6.01	\$9.00	\$6.96
DPS	\$2.64	\$2.70	\$2.84	\$2.94	\$1.00	\$1.06	\$1.16	\$1.33	\$1.69	\$1.75	\$1.84	\$2.24
Shares¹	1220	1230	1230	1240	1240	1180	1140	1100	1074	1321	1300	1200

When oil prices began to collapse in 2014, ConocoPhillips was, among the large oil companies, the producer that suffered the most. The company posted heavy losses in 2015 and 2016 and its stock price fell -60% from its peak. However, the company seems to have learned its lesson. It has focused on high grading its asset portfolio with the addition of low-cost barrels in order to achieve positive free cash flows even at oil prices below \$40.

Unfortunately, the company has posted flat production in the last two years due to the pandemic and the natural decline of its fields. In addition, it has posted an organic reserve replacement ratio of only 66.5% in the last two years. Nevertheless, the company is thriving right now thanks to 8-year high oil prices. Moreover, the purchases of low-cost reserves in the Permian have enhanced the efficiency of ConocoPhillips. Furthermore, ConocoPhillips has reduced its net debt by -39%, from \$52.7 billion in 2014 to \$32.0 billion. As a result, interest expense has fallen -26% in the last five years. We expect a further decrease in interest expense to support earnings. On the other hand, due to the high comparison base formed this year, we expect earnings-per-share to fall -5% per year on average over the next five years.

¹ In millions.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	9.5	10.1	15.0	---	---	---	13.7	17.1	---	9.8	10.1	12.5
Avg. Yld.	4.7%	4.2%	3.8%	5.1%	2.4%	2.2%	1.9%	2.2%	4.1%	3.0%	2.0%	2.6%

ConocoPhillips is currently trading at a price-to-earnings ratio of 10.1. We have assumed a fair price-to-earnings ratio of 12.5 for 2027, which is the average earnings multiple over the last decade. If this turns out to be correct, the stock will enjoy a 4.3% annualized valuation gain in its returns over the next five years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	44.7%	42.0%	57.3%	---	---	174%	25.6%	37.0%	---	29.1%	20.4%	32.1%

Since ConocoPhillips is a pure upstream company, it is much more leveraged to the price of oil than the well-known supermajors like Exxon Mobil and Chevron. Those companies remained profitable in the previous downturn of the energy sector (2014-2017) and avoided cutting their dividends. On the contrary, ConocoPhillips incurred heavy losses in 2015-2016 and cut its dividend by -66% in 2016. This unconvincing history, coupled with the high cyclical nature of ConocoPhillips' business, makes us believe that the company is not a safe income stock.

ConocoPhillips has made questionable investments in the past, such as its drilling rights in the U.S. Arctic and its deep-water business in Senegal. However, the company seems to have learned its lesson and has become much more disciplined, investing only in high-return projects. Nevertheless, investors should be aware of the sensitivity of ConocoPhillips to the price of oil. During the last financial crisis, earnings-per-share plunged -70%.

Final Thoughts & Recommendation

ConocoPhillips is an oil and gas pure upstream play that is highly leveraged to the price of oil. Thanks to limited global oil supply, ConocoPhillips is thriving right now. However, the stock has more than doubled in the last 12 months and hence it could offer just a 1.4% average annual return over the next five years. The stock could maintain its positive momentum in the short run, but we view it as unattractive from a long-term point of view. It thus receives a sell rating.
