Overview & Current Events

Toyota Motor Corporation is a multinational automotive conglomerate and Japan's largest manufacturer of automobiles. The company was founded in 1933 and has grown to be a leader in the automotive industry, manufacturing well-known vehicles such as the Camry, Corolla, Highlander, Sienna, Yaris, Prius, and RAV4. United States investors can invest in Toyota through American Depositary Receipts (ADRs) listed on the New York Stock Exchange. Toyota is headquartered in Toyota, Japan. All numbers in this report are in US\$ unless noted otherwise.

Toyota Motor Corporation reported its fiscal 2022 third quarter and full year earnings results on February 9. The company generated revenues of 7.8 trillion Yen during the third quarter, which equates to revenues of \$67 billion. This was 5% less than the revenues that Toyota was able to generate during the previous year's period. Toyota generated operating profits that were down by a large 21% year over year, compared to the previous year's quarter, which was blamed on the ongoing semiconductor shortages that resulted in lower sales and weaker profitability.

Toyota's net profits declined versus the previous year, and earnings-per-share totaled \$4.97 during the quarter, down 6% year over year. For this year, fiscal 2022, Toyota forecasts sales growth of around 8%, to around 8.25 million vehicles, which is down 4% versus the previous estimate. Toyota forecasts that its sales of electrified vehicles, including hybrids, will total 2.65 million this year, or close to 30% of all sales. Toyota believes that it will generate net profits of around 2.5 trillion Yen this year, which pencils out to earnings-per-share of \$15.80, which will be down versus the prior year.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$2.20	\$7.24	\$11.77	\$12.31	\$12.40	\$10.72	\$13.87	\$15.28	\$16.83	\$17.25	\$15.80	\$18.32
DPS	\$1.27	\$1.99	\$3.23	\$3.28	\$3.79	\$3.77	\$3.95	\$4.04	\$4.02	\$4.40	\$4.40	\$4.40
Shares³	1580	1580	1580	1570	1520	1490	1450	1425	1425	1400	1390	1350

Toyota Motor Corporation's earnings-per-share history is not very smooth, due to its poor performance during the financial crisis. The global economic downturn between 2007 and 2009 hurt all automobile manufacturers, even causing the bankruptcy of General Motors. Since fiscal 2014, when Toyota's earnings stabilized, the company has grown its earnings-per-share at 4% per year. Currency rates can impact Toyota's results when its results are converted to US\$, as Toyota generates a large amount of its earnings in Japan and other overseas markets.

While Toyota was an early mover in the hybrid vehicle market thanks to the introduction of the Toyota Prius in 1997, the company has yet to introduce a range of fully electric vehicle, outside of the all-electric Prius, that has gained widespread consumer popularity. We believe Toyota's reputation gives it the capability to capture meaningful market share once it introduces a range of fully electric vehicles. Toyota's strong operating efficiency, which is centered around a focus on lean operations and fast throughput, allows for above-average margins relative to most of the company's peers. This, coupled with new cost-saving initiatives that aim to reduce the automobile company's fixed costs, will be

another positive for Toyota's earnings growth. As a cyclical company, Toyota saw its sales decline during the pandemic, but due to strong cost controls, the company was able to offset sales headwinds, and profits remained strong.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	34.0	11.7	10.3	9.8	10.0	10.5	8.6	7.9	6.8	9.0	12.0	9.5
Avg. Yld.	1.7%	2.3%	2.7%	2.7%	2.9%	3.4%	3.5%	3.7%	3.5%	2.6%	2.3%	2.5%

Toyota has been valued at 9 to 12 times earnings since 2013, when its profits hit pre-crisis levels again. Right now, shares trade for around 12 times this year's earnings-per-share estimate. This represents a relatively high valuation compared to how Toyota's shares were valued in the past. Due to the issues in the industry, such as need for heavy electrification investments and supply chain issues, we believe that future fair value is at a lower level of 9-10 times annual net profits. We see some downside potential for Toyota's shares from the current level.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	57.7%	27.5%	27.4%	26.6%	29.4%	35.1%	29.9%	28.8%	23.9%	23.3%	27.8%	24.0%

Toyota's dividend payout ratio declined substantially following the last financial crisis, when earnings started to rise again. We believe that dividends will remain flat for the foreseeable future, but there are no guarantees for that.

Toyota was hit hard during the last financial crisis, like all of its peers. During other global downturns, such as the current pandemic crisis, the company will suffer from substantial sales declines as well. Toyota's major scale, and its operating efficiency provide competitive advantages over its peers. Its leadership role regarding hybrid vehicles has resulted in a positive reputation, on which Toyota could capitalize with electric vehicles in the future.

Final Thoughts & Recommendation

Toyota is, by vehicle sales, profits, and market capitalization, a leading automobile producer. Its results in recent quarters were solid, considering the impact of the pandemic. Toyota is famous for its operating efficiency and has produced relatively solid earnings growth during the last couple of years. Toyota forecasts business growth, but no earnings-per-share growth for the current fiscal year. Due to weak expected returns, we rate Toyota a sell right here.
