Overview & Current Events

Antero Midstream Corporation (AM) is a medium-sized midstream company providing gathering and compression services (65% by EBITDA), processing and fractionation services, and pipeline services on a captive basis to Antero Resources (AR). AR is the 5th largest natural gas producer and 2nd largest NGL producer in the country, operating fields primarily in West Virginia. AM has gone through several structural changes since it began operation in 2011, and trades today with a \$4.8 billion market capitalization.

As seems typical for these midstream businesses, the publicly traded entity is a pass-through shell for the profits from the underlying operating entity. It has traded LP units since 2014 but shares in its corporate format only since 2017. Then, in early 2019, the company underwent a simplification, in which the unit holders exchanged their units for newly issued shares and debt at the operating level was assumed by the remaining entity.

On February 16, 2022 Antero Midstream reported Q4 results. Adjusted EBITDA increased 40% to \$420 million year-over-year caused by higher realized natural gas and NGL prices. Free cash flow came in at \$237 million. Net income increased tremendously to \$901 million from \$70 million in the year-ago period. Adjusted net income stood at \$157 million compared to adjusted net loss of \$3 million in the year-ago period. The company also reported \$475 million of net cash provided by operating activities in Q4. Meanwhile, capital expenditures stood at \$152 million, while net debt to adjusted EBITDA stood at 1.3x as of December 31, 2021.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
DCF/S	---	---	---	---	---	\$0.15	\$0.45	\$1.30	\$1.39	\$1.25	\$1.38	\$1.25
DPS	---	---	---	---	---	\$0.16	\$0.54	\$1.23	\$1.23	\$0.98	\$0.90	\$0.90
Shares³	---	---	---	---	---	186.2	186.2	484.1	476.9	477.7	477.7	450.0

Given the challenges faced by the energy sector since the COVID-19 outbreak, AM is now more focused on paying down their debt (which is not all that high), reducing their capital expenditures, and pruning (monetizing) inefficient assets, than they were before COVID-19 hit. Since management has indicated a desire and ability to self-fund growth, and indeed to do opportunistic share repurchases, we assume no further share issuance.

Moving forward, capital expenditures will continue to decline, and the company just cut its dividend so that the partnership can continue to deleverage. We see no growth in DCF/share as the company grapples with headwinds from the aggressive shift towards renewable energy which virtually eliminates growth investment opportunities.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
P/DCF	---	---	---	---	---	138.3	34.4	5.0	4.7	8.5	7.4	7.0
Avg. Yld.	---	---	---	---	---	0.8%	3.5%	18.9%	18.8%	8.5%	8.8%	10.3%

The Price to DCF multiples for 2017 and 2018 are not meaningful for comparison purposes, since we had to use cash from operations as a proxy to DCFS. That said, compared to 2019-2020 multiples, its current multiple of 7.4 makes the stock look slightly over valued. Furthermore, even our assumption of 7 times distributable cash flow (reduced from 10 previously due to the challenging environment for fossil fuels) as a fair value estimate is beneath the current Price to DCF multiple. As a result, we forecast a slight headwind to total returns moving forward from multiple compression.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	---	---	---	---	---	107%	120%	94%	89%	72%	65%	72%

After the distribution cut, management projects a strong coverage ratio which should enable it to improve its balance sheet and eventually warrant a higher valuation multiple. While the balance sheet metrics are solid for now, the debt market's recent pricing of the debt at discounts to par value in traded markets tells another story. As a result, management has cut its dividend and has as its primary focus paying down debt to assure investors that its business model is sustainable, and its balance sheet will remain solvent in the uncertain current environment.

Final Thoughts & Recommendation

AM looks cheap on a dividend yield and distributable cash flow basis. That said, the main challenge to the investment thesis is assuring investors that its equity and debt securities are covered by dependable cash flows, and that it will be able to keep leverage ratios down even if its cash flows decline somewhat. As a result, despite the attractive yield, we do not see this as a particularly attractive income investment for investors, so it is a hold given higher levels of risk as well as the lackluster annualized total return outlook of 5.4%.
