Overview & Current Events

Höegh LNG Partners LP focuses on owning, operating, and acquiring floating storage and regasification units (FSRUs), liquefied natural gas (LNG) carriers, and other LNG infrastructure assets under long-term charters. The company's principal strength is in its relationship with its sponsor, Höegh LNG, which has a track record dating back to the delivery of the world's first Moss-type LNG carrier in 1973. The \$145.4 million company owns interests in a fleet of five FSRUs, generates around \$145 million in annual revenues, and is based in Hamilton, Bermuda.

What makes HMLP unique in contrast to LNG carriers is that FSRUs do not actually transport LNG. The company's ships are used as an "infrastructure asset," simply remaining docked, providing access to the LNG customer when needed. Because their role is "niche" in the value chain, the company does not necessarily share the more volatile environment other firms face during the different stages of production. Its storage-like operations remain essential and cannot merely be "suspended." Hence, its cash flows are more stable, even in difficult periods, like the last several months.

On February 23rd, 2022, Höegh LNG Partners reported its Q4-2021 results for the period ending December 31st, 2021. Its FSRUs, achieved virtually 100% availability once again due to its business model as described above. Total time charter revenues were \$36.2 million, just 0.28% higher year-over-year. Although DCFU (Distributable Cash Flow per Unit) was not reported for this quarter due to the company's current state (read below), our calculations are that the company achieved DCFU of around \$2.54 during FY2021. Despite the stable operations, HMLP units remain depressed. Read the updated case below to see why:

The charterer under the lease and maintenance agreement for the PGN FSRU Lampung ("LOM") served a notice of arbitration ("NOA") on August 2nd, 2021, to declare the LOM null and void and/or to terminate the LOM and/or seek damages. HMLP has served a reply refuting the claims as baseless and without legal merit and has also served a counterclaim against the charterer for multiple breaches of the LOM. HMLP leadership has said that it will take all necessary steps and will vigorously defend against the charterer's claims in the legal process. Notwithstanding the NOA, both parties are continuing to perform their respective obligations under the LOM.

At the moment, this isn't about who is right (legally), but whether HMLP can afford to run the legal battle without running out of liquidity. HMLP slashed its distributions to a quarterly rate of \$0.01 to conserve its internally generated cash flow to resolve issues related to the refinancing of the Lampung facility.

On September 29th, 2021, the Partnership entered into an agreement with its lenders to defer the maturity date of the commercial tranche of its Lampung facility to allow for more time to conclude a refinancing of this tranche. On December 24th, 2021, the Partnership closed a refinancing of the PGN FSRU Lampung debt facility's commercial tranche's outstanding amount of \$15.5 million in full.

The refinancing should provide HMLP with needed time and liquidity that would allow it to show the client disputing the charter that they're not folding and that the charter is risking not only losing the arbitration but also paying damages. However, there's still no way for us to assess how likely HMLP is to settle the case on time, and it's clear that any solution would be expensive for the partnership.

¹ Estimated distribution dates based on past distribution dates.

Höegh LNG Partners LP (HMLP)

Updated March 1st, 2022 by Nikolaos Sismanis

On December 6th, 2021, the Partnership received an unsolicited non-binding proposal from Höegh LNG (the parent company) pursuant to which Höegh LNG would acquire through a wholly owned subsidiary all publicly held common units of the Partnership in exchange for \$4.25 in cash per common unit. This appears to be a devious offer by the parent to buyout the company on the cheap while its units remain depressed. It's almost certain that unitholders are against this, as illustrated by units currently trading at a premium to offer price.

We expect DCFU of \$2.00 for FY2022, though the metric is currently irrelevant, as how the upcoming arbitration will play out as well as the fate of the buyout offer, are the only meaningful events in terms of whether the stock surges or goes under.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
DCFU	---	---	\$1.50	\$1.55	\$1.84	\$1.94	\$2.15	\$2.00	\$2.20	\$2.54	\$2.00	\$2.00
DPS	---	---	\$1.43	\$1.65	\$1.72	\$1.76	\$1.76	\$1.76	\$1.76	\$0.47	\$0.04	\$1.28
Units ²	---	---	26.3	26.3	26.8	32.9	33.1	33.2	33.2	33.4	33.4	36.0

Due to the fixed contract life of its FSRUs, steady cash flows should last for nearly a decade more. Therefore we expect the company to keep delivering robust DCFU in the medium term, as it has done historically. While the company is likely to grow its fleet as FSRUs drop down by its sponsor (HLNG), DCFU and DPS may not increase meaningfully, as the company will likely issue more shares in the process. That being said, as a consequence of its sponsor going private earlier this year, HLNG is not required to offer HMLP Five-Year Vessels and is permitted to compete with HMLP.

Therefore, HMLP may struggle to grow its fleet. While the long-term charter contracts do not threaten the medium-term cash flows, HMLP will likely have to hunt for its own FSRUs, and we can't guarantee that management is competent enough to do so without its sponsor fully supporting it. HLNG remains "committed" to providing support, nonetheless. Still, we remain cautious about their future relationship. We continue to expect steady financials in the medium term and have utilized a massive 100% DPS CAGR in the medium term to price in a strong DPS resumption should the arbitration ends in favor of HMLP.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
P/DCFU	---	---	12.5	11.7	9.6	9.9	8.5	7.3	6.7	2.0	2.2	6.0
Avg. Yld.	---	---	7.2%	9.3%	9.8%	9.1%	10.0%	11.5%	11.5%	0.9%	0.9%	10.7%

HMLP currently trades at a depressed valuation relative to its cash flows, as the stock's fate is entirely dependent on the events described earlier. We believe that a P/DCFU of 6 is a fair multiple for the stock should it come out of its current state, though the stock is not currently trading based on its valuation metrics.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	---	---	95%	106%	93%	91%	82%	88%	80%	19%	2%	64%

In the ultra-niche FSRU space, HMLP is by far the highest quality company, showcasing incredibly robust financials and the most experienced sponsor in the globe when it comes to the industry (though with the notable relationship risk mentioned earlier).

² Unit count is in millions.

Höegh LNG Partners LP (HMLP)

Updated March 1st, 2022 by Nikolaos Sismanis

Operating Cash flows should be safe over the next 7-10 years, with potential contract extensions for another decade in some of its current charterers' options. As proven during the ongoing pandemic, DCFU should remain robust even under a potential recession. Simultaneously, due to dominating the minimal availability of FSRUs and the nature of its contracts, the company should face no material competition in the medium term.

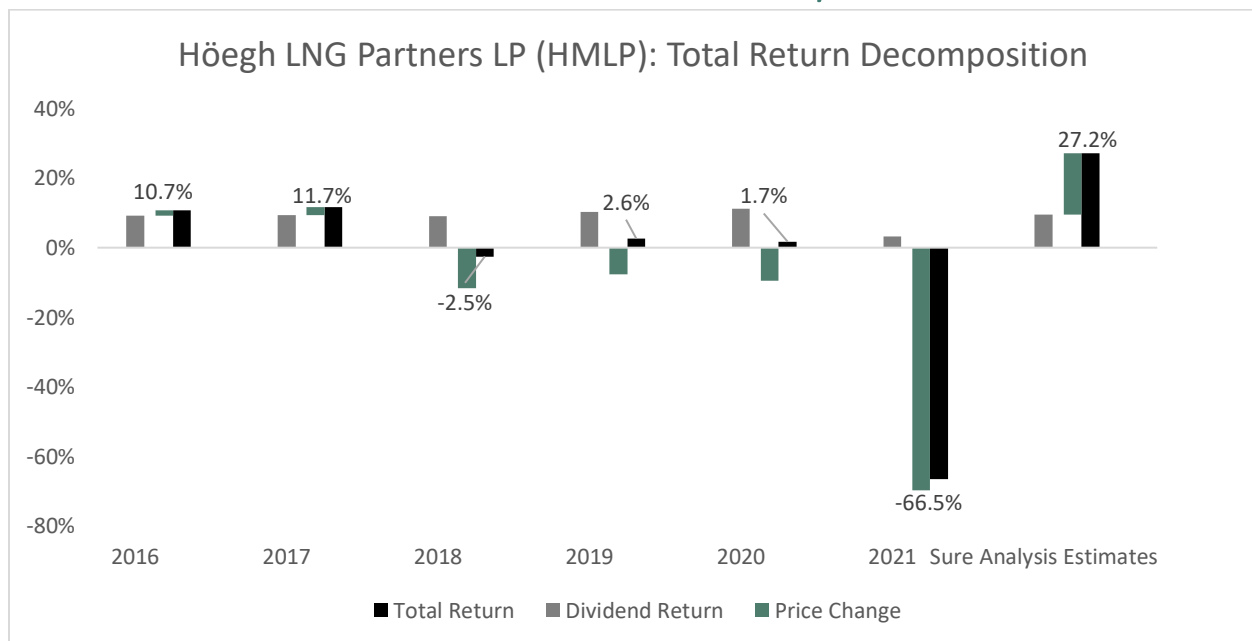

There are currently only 37 FRSUs on water, with 10 of those being controlled by HMLP and its sponsor, HLNG. They are very slow to build, so competition is not an issue for the company. Still, there are major risks regarding the longevity of the business. Therefore investors are discounting a limited amount of cash flows amid a limited lifetime value of its assets. Hence the single-digit P/DCFU.

Final Thoughts & Recommendation

Höegh LNG Partners is a truly unique stock, operating in a very niche industry. It should keep enjoying contractually secured cash flows for years to come. In its current state, however, future returns are entirely dependent on how the arbitration process and/or the buyout offer will play out. HMLP has the potential to deliver massive annualized returns in the medium term, which can range from 20% to 40% based on various forecasts. Simultaneously, HMLP could also be bought at \$4.25/unit implying that current unitholders will face further losses. The stock's investment case is entirely speculative at this point.

This makes HMLP an interesting *high risk, high reward* buy. It's not the type of security to buy for stable income, but a small position could make sense for more speculative investors as the risk adjusted returns appear favorable.
