Overview & Current Events

Hewlett-Packard's story goes back to 1935 with two men in a one-car garage making a huge impact on electronic test equipment, computing, data storage, networking, software and services that has lasted for more than eight decades. On November 1st, 2015, Hewlett-Packard spun off Hewlett Packard Enterprise Company (HPE) – which was its enterprise technology infrastructure, software and services business – and changed its name to HP Inc. (HPQ). Today HP Inc. has centered its business activities around two main segments: its product portfolio of printers, and its range of so-called personal systems, which includes computers and mobile devices.

HP reported its first quarter (fiscal 2022) results on February 28. The company reported revenue of \$17 billion for the quarter, which easily beat the analyst consensus estimate, and which was up 9% from the previous year's quarter. The coronavirus crisis did not have an impact, unlike during the initial phase of the pandemic, when HP had to report declining revenues as some commercial customers chose to spend less money.

Non-GAAP earnings-per-share totaled \$1.10 during the first quarter, which beat the analyst consensus estimate easily. Earnings-per-share were up by an attractive 20% versus the prior year's quarter. The company currently forecasts earnings-per-share in a range of \$1.02 to \$1.08 for the second quarter, which would mean that strong results continue in the current fiscal year, following a very strong 2021. It is forecasted that earnings-per-share will hit a new record level this year, with management's earnings-per-share guidance range being \$4.18 to \$4.38, which would represent growth of around 13% versus the previous year at the midpoint of the guidance range. The current earnings-per-share guidance represents a 3% increase versus the initial FY2022 guidance that had been issued one quarter ago.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	---	---	---	---	\$1.53	\$1.48	\$2.02	\$2.24	\$2.28	\$3.79	\$4.28	\$5.21
DPS	---	---	---	---	\$0.37	\$0.52	\$0.55	\$0.64	\$0.70	\$0.78	\$1.00	\$1.34
Shares¹	---	---	---	---	1,712	1,650	1,570	1,490	1,360	1,140	1,050	900

HP Inc. does not have a long history as a standalone company, as it was created just a few years ago. HP grew its earnings-per-share meaningfully between 2016 and 2020, while also ramping up its dividend payments during that time.

During the last couple of years HP's earnings-per-share rose thanks to a combination of growing net earnings and a declining share count, although the huge growth rate from 2017 to 2019 likely will not be replicated forever, as some one-time items such as tax law changes impacted results positively. HP is a leader in the printing and personal computing markets, but these are areas that face challenges as consumers continue to shift to mobile devices. The adoption of 3D printing could help, as HP is already entrenched in this industry, but so far the majority of profits are generated by traditional printers and printing products. Even without any meaningful business growth, corporations can still generate growth on a per-share basis using shareholder return programs. Through a rapid pace of share repurchases, HP has a good chance of growing its earnings-per-share meaningfully going forward, showcased by the reduction of more than 30% in its share count between 2016 and 2021.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	---	---	---	---	8.3	12.0	11.3	8.0	7.9	8.2	9.3	10.0
Avg. Yld.	---	---	---	---	3.9%	3.0%	2.4%	3.6%	3.9%	2.5%	2.5%	2.6%

The combined entity known as Hewlett-Packard used to trade hands at a low- to mid-teens earnings multiple. Since the split, something closer to 10 times earnings has been more typical for HP Inc., as investors are still waiting to see whether the legacy business can continue to evolve. We believe this is a reasonable multiple, given the somewhat uncertain longer-term outlook. Share have performed well in recent months but earning-per-share have risen considerably as well, which is why shares still look slightly undervalued at current prices.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	---	---	---	---	24.2%	35.1%	27.2%	28.6%	30.7%	20.6%	23.4%	25.7%

HP has grown its dividend repeatedly during the last couple of years, but there is no long-term data. The dividend looks quite safe today, as it is easily covered by both profits and cash flows. HP pays out a large amount of cash to its owners via share repurchases, which have been a major growth driver for its earnings-per-share in the past. HP decided to continue to raise its dividend during the pandemic, with dividend increases being announced in 2020 and 2021.

HP enjoys competitive advantages as a leader in its two legacy businesses. The long-term viability of these markets is unknown to some extent, but for now HP owns a \$4+ billion annual underlying profit machine. HP could be a major beneficiary of consolidation in the industry, and thanks to its strong balance sheet and ample cash flows, it could easily become an acquirer of competing businesses. Things can change quickly in technology, so it makes sense for HP to have the resources available to buy its way into the next trend if there is a strategic fit.

Final Thoughts & Recommendation

There is a possibility that HP's legacy business may ultimately decline, but for the moment the company's profit generation is strong. In addition, HP has ways to grow, both organically as well as via M&A. HP's shares are trading at an inexpensive valuation, and 2022 is on track to be another strong year for the company. The coronavirus crisis will not impact HP going forward, and thanks to solid forecasted returns, we rate the stock a hold at current prices.
