Overview & Current Events

Morningstar was founded in 1984 as a way for investors to seek information about hundreds of popular mutual funds that was out of reach prior to the company's Sourcebook product. Since that time Morningstar has grown tremendously, serving about nine million clients. It produces ~\$1.7 billion in annual revenue and has a market capitalization of just over \$11 billion.

Morningstar reported fourth quarter earnings on February 24th, 2022, and results were once again excellent. The company reported fourth quarter revenue of \$462 million, which was up 22% year-over-year. Organic revenue was up 21%, with the balance coming from acquisitions and divestitures.

Operating income for the quarter was up 15% year-over-year to \$75 million, although on an adjusted basis, operating income was up less than 8%. Adjusted diluted earnings were down 4.5% in Q4 at \$1.50.

Revenue for the full year was up 22% to \$1.7 billion, while organic revenue growth was up 18%. Operating income was up 19% to \$257 million, while adjusted operating income was 15% higher. Adjusted earnings-per-share ended the year at \$6.36, another record for Morningstar.

Morningstar also produced \$348 million in free cash flow for the full year. We forecast \$6.80 in earnings-per-share as our initial estimate for this year.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$2.10	\$2.66	\$2.54	\$3.00	\$3.72	\$2.88	\$4.25	\$3.52	\$5.40	\$6.36	\$6.80	\$9.54
DPS	\$0.53	\$0.38	\$0.70	\$0.79	\$0.88	\$0.92	\$1.00	\$1.12	\$1.20	\$1.44	\$1.44	\$2.12
Shares¹	46	45	44	43	43	43	43	43	43	43	43	43

Morningstar's earnings-per-share history is very strong considering the wide array of economic conditions that have existed in the past decade. The company saw a small dip in earnings at the height of the crisis in 2009 and there have been a couple of other small blips, but it has managed an average growth rate of more than 10% in the past decade. We see growth slowing down moving forward and are therefore forecasting 7% earnings-per-share growth for the coming years.

We think mid-single-digit revenue growth and a bit of further margin growth potential make 7% earnings-per-share growth look feasible. This growth estimate is also dependent on the company's appetite for acquisitions moving forward. Its long-term revenue and earnings growth include many acquisitions over time, so we see this estimate as including some additional M&A that has not occurred yet. Morningstar's position in its niche is well established and we see its future as very bright looking forward. It also continues to experience tremendous success with its PitchBook and other licensed products, and the significant costs related to recent mergers should not recur in future years, which will also help boost margins. Morningstar is also now buying back small amounts of its shares.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	28.7	27.7	28.2	25.8	21.4	28.1	27.2	40.2	29.8	41.1	38.4	30.0
Avg. Yld.	0.9%	0.5%	1.0%	1.0%	1.1%	1.1%	0.9%	0.8%	0.7%	0.5%	0.6%	0.7%

Morningstar's average price-to-earnings ratio has been very high in the past decade as its trough value was 21.4, set in 2016. Investors have always been willing to pay a premium for this stock and that is not going to change. Morningstar, and other businesses like it with lucrative subscription models, tend to receive premium valuations due to their high rates of recurring revenue and superior profitability. However, today's price-to-earnings ratio of 38.4 is still well in excess of our estimate of fair value, which we see as 30. The stock has declined significantly since our last update, and in conjunction with higher earnings, the valuation has improved immensely. Even so, the security could experience a significant annual headwind to total returns as the valuation returns to more normalized levels. We see the yield remaining below 1% for the foreseeable future; Morningstar is not a high-income stock.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	25%	14%	27%	25%	24%	32%	24%	32%	22%	23%	21%	22%

Morningstar's payout ratio is not likely to be significantly above a quarter of earnings anytime soon, barring a major shift in capital allocation strategy, so we see the yield as staying quite low for the foreseeable future. Certainly, management has been more interested in investing for future growth, and that strategy isn't going to change anytime soon.

Morningstar's competitive advantage is in its very long operating history in a niche of the investment world it helped create. The company's subscription service, particularly with its PitchBook product, is a key differentiator and we see it powering future growth for many years to come. Morningstar was largely unaffected by COVID-19.

Final Thoughts & Recommendation

Overall, we see Morningstar as a stock with a strong moat but also one that is still overvalued, making it less compelling at present. We are forecasting just 2.5% total annual returns moving forward, as growth and the small yield could be mostly offset by the valuation, which we see as too high once again. Morningstar's future is very bright, but given weak expected returns, we are reiterating it at a sell rating.
