Overview & Current Events

On October 19th, 2018 Energy Transfer Equity, LP (previously ETE) and Energy Transfer Partners, LP (previously ETP) announced the completion of a merger with ETE buying ETP. As part of the merger, ETE changed its name to “Energy Transfer LP” and the common units began trading under the “ET” symbol. The combined firm owns and operates one of the largest and most diversified portfolios of energy assets in the United States. Operations include natural gas transportation and storage along with crude oil, natural gas liquids and refined product transportation and storage totaling 83,000 miles of pipelines. Energy Transfer, a \$34.3 billion market capitalization company, also owns the Lake Charles LNG Company and stakes in Sunoco LP (SUN) and USA Compression Partners (USAC). On December 7th, 2021 Energy Transfer completed the acquisition of Enable Midstream Partners (ENBL) in a \$7 billion stock-for-stock deal.

In early May, Energy Transfer reported (5/4/22) financial results for the first quarter of fiscal 2022. The company grew its volumes in all segments and also benefited from higher commodity prices and the acquisition of Enable. However, distributable cash flow decreased from \$3.9 billion in the prior year’s quarter to \$2.1 billion due to extraordinary results in last year’s period amid winter storm Uri. During the quarter, Energy Transfer increased its leverage ratio (Net Debt to EBITDA) from 3.07 to 3.55 but it posted a strong distribution coverage ratio of 3.4. It also raised the quarterly dividend by 14%, on top of the 15% dividend hike in the previous quarter. It thus now offers an annualized distribution of \$0.80 while management reiterated that it has a goal of restoring the annual distribution to \$1.22 at some point in the future. We have assumed 5% distribution growth over the next five years, just to be on the safe side.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
CF/S	\$0.91	\$1.31	\$2.12	\$3.12	\$3.20	\$3.38	\$2.06	\$2.20	\$2.13	\$2.90	\$2.30	\$2.54
DPS	\$0.63	\$0.67	\$0.80	\$1.08	\$1.14	\$1.15	\$1.22	\$1.22	\$1.07	\$0.61	\$0.80	\$1.02
Units²	1,120	1,123	1,081	1,047	1,047	1,079	2,619	2,650	2,699	2,831	3,110	3,500

Energy Transfer operates a “toll booth” model of transporting energy, with natural gas being particularly interesting. Eventually the world may move away from fossil fuels, but this is not the case for the foreseeable future. Moreover, all the environmental policies are positive for natural gas, which is considered a cleaner and environmentally friendly fuel. In the last decade, U.S. electricity production has shifted dramatically from coal to natural gas.

Energy Transfer has a healthy backlog, with the expectation to spend billions of dollars in capital expenditures this year. The growth projects and the acquisitions of Energy Transfer will be significant growth drivers, but its results will be burdened by its high net debt load (\$57.2 billion) and its increased share count. Energy Transfers’ investments prime the MLP for growth in a positive scenario but render it vulnerable to downturns. We expect 2% average annual growth in cash flow per share over the next five years.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg P/DCF	12.5	15.6	13.5	4.4	6.0	5.1	6.4	5.3	3.6	3.1	4.8	4.8
Avg. Yld.	5.9%	4.3%	3.1%	4.0%	8.6%	6.5%	9.2%	10.5%	14.1%	6.8%	7.3%	8.4%

The average price-to-cash flow ratio of Energy Transfer has dramatically decreased in recent years due to the excessive debt load of the MLP. The stock is trading at a cash flow multiple of 4.8, which is equal to the 7-year average valuation level. As a result, we do not expect valuation to play an important role in the 5-year return of the stock.

Safety, Quality, Competitive Advantage, & Recession Resiliency

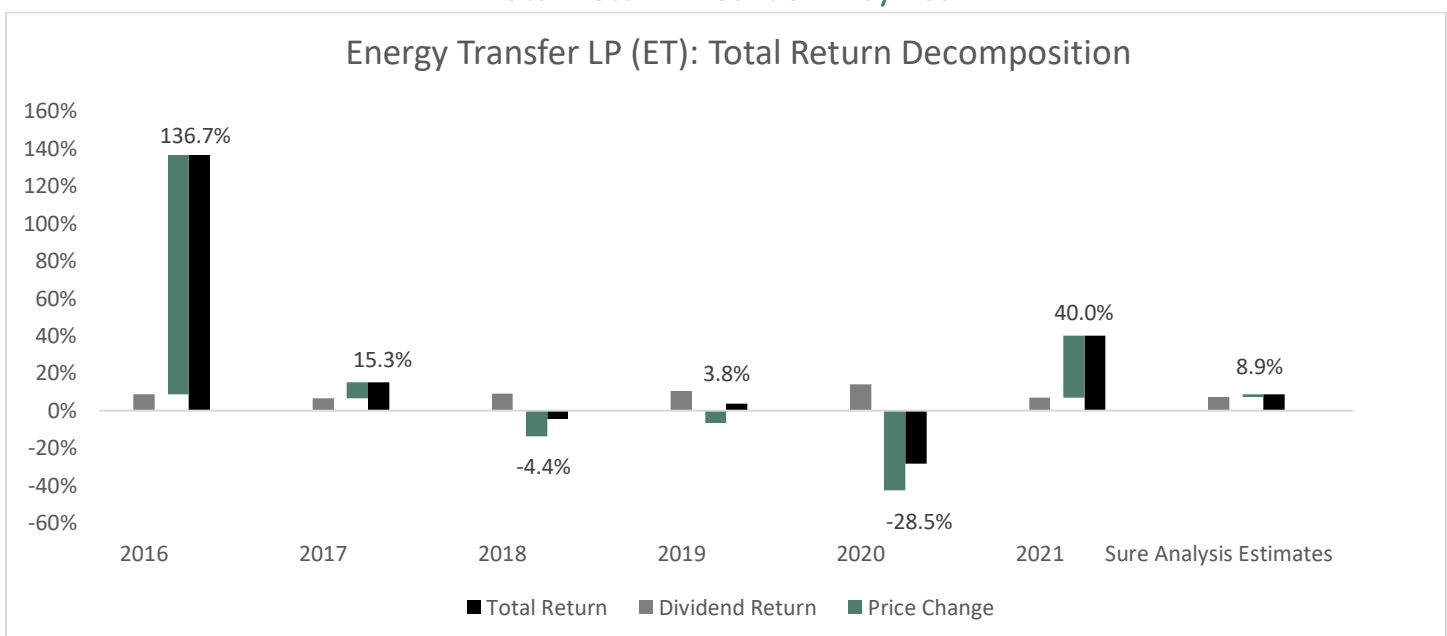

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	69%	51%	38%	35%	36%	34%	59%	56%	50%	21%	35%	40%

Energy Transfer has been trying to offer extremely generous distributions to its shareholders and at the same time it has been investing excessive amounts in growth projects and acquisitions. Unfortunately, it is impossible to achieve these without a price. The price is the leveraged balance sheet, which renders the MLP vulnerable to any unforeseen downturn. When the pandemic struck, Energy Transfer was forced to cut its distribution by -50% due to its high leverage. Moreover, the stock plunged -70% in less than three months due to investors' aversion to the risk of the stock. Income-oriented investors who are attracted by the high distribution yield of the MLP should be well aware of its risk and its volatility. With that said, the new (reduced) distribution is well covered by cash flows, with a coverage ratio of 3.4. Therefore, in the absence of another downturn, the 7.3% forward distribution yield should be considered safe.

Final Thoughts & Recommendation

Energy Transfer is a risky bet given the pandemic and the weak balance sheet of the MLP. However, the pandemic has subsided and thus the stock could offer an 8.9% average annual return over the next five years thanks to its 7.3% distribution yield and 2% growth in cash flow per share. The stock receives a hold rating, but it is suitable only for investors who can stomach extreme volatility.
