## Overview & Current Events

Permian Basin Royalty Trust (PBT), based in Dallas, Texas, is an oil and gas trust (about 70% oil and 30% gas), which was founded in 1980. It is a combination trust: unit holders have a 75% net overriding royalty interest in Waddell Ranch Properties in Texas, which includes 332 net productive oil wells, 106 net productive gas wells and 120 net injection wells; and a 95% net overriding royalty interest in the Texas Royalty Properties, which includes various oil wells.

The trust's assets are static in that no further properties can be added. The trust has no operations but is merely a pass-through vehicle for the royalties. PBT had royalty income of \$12.0 million in 2020 and \$11.8 million in 2021.

In mid-May, PBT reported (5/16/22) financial results for the first quarter of fiscal 2022. Its average realized prices of oil and gas grew 73% and 67%, respectively, over last year's quarter thanks to the rally of benchmark prices to 13-year highs, which have resulted from the sanctions of Europe and the U.S. on Russia for its invasion in Ukraine. Volumes of oil and gas sold more than doubled and thus distributable income per unit doubled, from \$0.04 to \$0.08.

The performance of PBT remained markedly disappointing compared to its peers SBR and CRT due to the high operating expenses on the Waddell Ranch properties. PBT has offered a poor total distribution of only \$0.15 per unit in the first five months of 2022 despite the impressive rally of oil and gas prices to 13-year highs. Its latest quarterly distribution is still much lower than its distributions in 2017-2018. Thanks to the elevated commodity prices, we expect PBT to improve its results in the upcoming months, though the time of the recovery is uncertain.

## Growth on a Per-Unit Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
<b>DCFU</b>	\$1.16	\$0.87	\$1.02	\$0.34	\$0.42	\$0.63	\$0.66	\$0.42	\$0.24	\$0.23	<b>\$0.40</b>	<b>\$0.51</b>
<b>DPU</b>	\$1.16	\$0.87	\$1.02	\$0.34	\$0.42	\$0.63	\$0.66	\$0.42	\$0.24	\$0.23	<b>\$0.40</b>	<b>\$0.51</b>
<b>Units<sup>1</sup></b>	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	<b>46.6</b>	<b>46.6</b>

Essentially all the royalty income the trust receives is passed through to unit holders. The trust has generated an average distributable and distributed cash flow of \$0.60/unit annually for the past 10 years, though with a noticeable decrease in the last seven years. Given the natural decline of the production of oil wells and gas wells, the long-term downtrend in cash flows should be expected. Over the last six years, the production of oil and gas of PBT has declined at an average annual rate of -6% and -2%, respectively. On the other hand, given the somewhat low comparison base formed this year, we expect PBT to grow its distributable cash flow per unit by 5% per year on average over the next five years.

## Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
<b>P/DCFU</b>	15.5	15.5	12.8	22.9	15.8	14.4	13.2	13.6	13.3	23.9	<b>43.8</b>	<b>13.0</b>

Updated May 30<sup>th</sup>, 2022 by Aristofanis Papadatos

The trust's DCFU price multiple has averaged 16.1 over the past 10 years. We assume a fair valuation multiple of 13.0 for the trust due to our natural expectations for declining production volumes in the long run. Due to its current depressed cash flows, PBT is now trading at a valuation multiple of 43.8. If PBT trades at our assumed fair valuation level in five years, it will incur a -21.5% annualized drag in its returns.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

PBT has been in continuous existence for 42 years paying an average 6.5% yield in the last decade (albeit with high volatility in the distributions). However, future distributions are highly unpredictable due to the absence of any guidance and the unknown path of oil and gas prices. If the realized oil and gas prices of PBT remain elevated, the trust will reward its unit holders, as it will enhance its currently lackluster distributions. On the other hand, if the energy market enters another downcycle or PBT continues to realize much worse oil and gas prices than the benchmark prices, the trust is likely to exhibit poor performance.

## Final Thoughts & Recommendation

PBT has exhibited disappointing cash flows and distributions in recent months, mostly due to its high operating expenses. The prices of oil and gas have rallied to 13-year highs but PBT has hardly benefited so far due to its high operating expenses. Moreover, PBT has more than quadrupled in the last 12 months and thus it has become much less attractive. We expect PBT to improve its performance in the short run but offer a poor average annual return over the next five years. As a result, PBT receives a sell rating. We also reiterate that we do not believe PBT is a buy-and-hold-forever stock due to the natural decline of its production in the long run.
