Overview & Current Events

Amphenol is an American electronics company primarily involved in the production of fiber optic connectors, coaxial cables, and other such systems. The company was founded in 1932 as American Phenolic Corp; the name was subsequently shortened to Amphenol. Its primary end markets are for IT and data services, industrial, and automotive uses. The company had a highly successful past decade, with its share price rising 400 percent. This, in turn, lifted Amphenol's market cap to more than \$40 billion today.

Historically, Amphenol was a growth investment with a minimal dividend. In 2012, however, the company started to put a focus on increasing its dividend, and since then, it has grown its annual payout at a double digit compounded rate.

On April 27th, 2022, Amphenol released its Q1 2022 earnings. The company earned 67 cents per share for the quarter, which topped estimates by six cents. The company's revenue came in at \$2.95 billion, which also exceeded expectations and represented 24% year-over-year growth. The company reported double digit growth in all three of its largest end markets despite significant headwinds from supply chain issues and renewed COVID-19 shutdowns in China.

The company's guidance for the second quarter suggests that Amphenol will see a significant slowdown from the first quarter, with revenue growth dipping to 10% at the midpoint of guidance. Regardless, that's still strong performance given the current issues facing the industry. More broadly, Amphenol may see a boost to its business prospects in two key areas. Demand for aircraft and sensor products should rise as the global tourism industry continues to recover, and Amphenol's sales into the military equipment channel may pick up given recent geopolitical developments.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$0.85	\$0.96	\$1.13	\$1.21	\$1.36	\$1.56	\$1.93	\$1.88	\$1.96	\$2.48	\$2.83	\$4.66
DPS	\$0.11	\$0.15	\$0.23	\$0.27	\$0.29	\$0.35	\$0.44	\$0.48	\$0.52	\$0.64	\$0.80	\$1.28
Shares	639	633	620	616	615	611	597	596	599	599	599	599

Since 2012, Amphenol has grown its earnings at a 12.6% average compounded rate. This growth rate has been steady; Amphenol has averaged a 12.7% earnings growth rate over the past five years, showing the consistency of its operations. Amphenol has boosted its earnings both through organic growth and a series of acquisitions.

Up until 2012, Amphenol paid a minimal dividend. Since then, Amphenol has pivoted to returning a substantially greater portion of its profits to shareholders through its dividend. As a result of this increasing attention to the dividend, Amphenol has managed tremendous dividend growth rates of 18.9% and 21.6% over the past five and nine years, respectively.

Going forward, we estimate 10.5% annualized earnings growth over the next five years. Amphenol has generated a proven track record of being able to consistently grow its business through a variety of business cycles and economic conditions. The mass deployment of 5G mobile networks and continuing demand for additional data centers should help generate favorable business prospects for Amphenol in coming years.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	17.0	20.1	21.6	22.8	21.7	24.7	23.1	25.4	26.4	29.0	24.4	23.0
Avg. Yld.	0.7%	0.8%	0.9%	1.0%	1.0%	0.9%	1.0%	1.0%	1.0%	0.9%	1.2%	1.2%

A significant portion of Amphenol's exemplary returns over the past decade came due to expansion of its P/E ratio. Amphenol's P/E rose from 17.0 in 2012 all the way to 29.0 in 2021. With the sell-off in the stock so far in 2022, however, the P/E ratio has pulled back to a more reasonable 24.4. With the reset in valuation ratios for the tech industry and many suppliers which sell to these firms, it seems unlikely that Amphenol will support the loftier P/E ratios it saw over the past three years. Rather, we see Amphenol's P/E ratio settling closer to 23.0 over the long term.

Over the years, the company's dividend yield has ticked upward, rising from 0.7% in 2012 to 1.2% now. This has come, to a significant extent, because Amphenol has increased its dividend payout faster than earnings have grown. For now, we forecast the average dividend yield to stay at 1.2%, though the company has more room to grow its payout if it wishes.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	13%	16%	20%	22%	21%	22%	23%	26%	27%	26%	29%	27%

Amphenol operates in highly competitive markets with tons of rival firms. However, its broad product line and superior cost management have given the firm a persistent advantage over peers.

In theory, Amphenol might seem to face significant risk during economic downturns. But the company has developed durable relationships with key customers, insulating it from the technology industry's boom and bust cycle. Additionally, while the company's payout ratio has ticked up slightly in decent years, it remains at a low level overall.

Amphenol's balance sheet is in fine shape. It had \$6.1 billion of current assets against \$2.4 billion of current liabilities as of last report. The company's \$4.9 billion of long-term debt is manageable compared to its \$14.9 billion of total assets.

Final Thoughts & Recommendation

Amphenol shares have fallen 20% year-to-date. We now forecast total return potential of 10.3% per annum. Earnings growth will drive nearly all that total return. Meanwhile, the company's dividend yield may be somewhat offset by a moderate decrease in the company's valuation ratio. Amphenol faces some near-term risks due to supply chain issues, inflation, and a slowdown in the technology industry. However, the overall picture is positive. Shares earn a buy rating.
