Overview & Current Events

Gladstone Capital is a business development company, or BDC, that primarily invests in small and medium businesses. These investments are made via a variety of equity (10% of portfolio) and debt instruments (90% of portfolio), generally with very high yields. Loan size is typically in the \$7 million to \$30 million range and has terms up to seven years. The BDC's stated purpose is to generate income it can distribute to its shareholders. The company trades with a market capitalization of \$367 million and it pays distributions monthly, instead of quarterly.

Gladstone reported third quarter earnings on July 27th, 2022, and results were largely in line with expectations. Total investment income was \$13.78 million, up fractionally year-over-year. Net investment income was 20.25 cents per share, up from 19.5 cents in the year-ago period.

Total investments at the end of the period rose 9.1% quarter-over-quarter to \$586 million, following strong originations in the third quarter.

Net asset value was \$9.12 per share, down 3.9% from the March quarter, driven by valuation adjustments associated with higher market yields and reduced equity valuation multiples.

We now see 93 cents in NII-per-share for this year, following decent Q3 results.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
NII	\$0.91	\$0.88	\$0.87	\$0.84	\$0.84	\$0.84	\$0.85	\$0.84	\$0.81	\$0.79	\$0.93	\$0.93
DPS	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.84	\$0.78	\$0.78	\$0.81	\$0.81
Shares¹	21.0	21.0	21.0	21.1	23.2	25.5	27.1	29.3	33.0	34.0	35.0	42.0

Gladstone reports net investment income per share, or NII, instead of earnings-per-share, which is consistent with other BDCs. On that measure, the company's results have been lackluster in terms of growth over the past decade. Our estimate of 93 cents for this year is largely in line with historical NII. Gladstone's share issuances have funded higher NII in dollar terms but haven't earned enough above its cost of capital to move the needle on NII-per-share. Given this history, we're moving our growth estimate from -1% to 0%.

The yields on the company's portfolio influence its ability to earn income and therefore, cover its expenses and pay distributions to shareholders. Over time, the company's portfolio yield has drifted higher to 10%+, where it is today. However, higher expenses have offset that growth recently, which is part of the reason why NII-per-share continues to be roughly flat over time. Gladstone's portfolio continues to grow in dollar terms, but given its offsetting rising expenses, NII hasn't grown. We see this cycle of new investments being largely offset by losses and higher expenses. The company has made profitable exits of late, not only generating gains, but also the ability to recycle that capital.

Gladstone's dividend had been at \$0.07 monthly, or \$0.84 annually, since 2010. However, the payout was trimmed in 2020, although Gladstone is in the process of rebuilding it. The current payout looks quite sustainable.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/NII	9.2	10.1	10.9	10.0	9.1	11.4	10.7	10.8	10.2	12.7	11.5	10.5
Avg. Yld.	10.1%	9.5%	8.8%	10.0%	11.0%	8.8%	9.3%	9.2%	9.4%	7.8%	7.6%	8.3%

Gladstone has traded at a price-to-NII ratio very near 10.5 in the past decade, which is where we assess fair value. At 11.5 times NII, the stock still appears to be overvalued. We therefore see a modest headwind to total returns should the valuation normalize.

The yield is lower than it has been for most of the past decade; Gladstone's average yield in the past decade has been close to 10%, and we see the yield rising over time, in excess of 8%. We see the yield as warning investors that Gladstone is overpriced today.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	92%	95%	97%	100%	100%	100%	99%	100%	96%	99%	87%	87%

Gladstone doesn't have any competitive advantages as it operates in much the same way as any other BDC. It is also dependent upon funding costs and the spreads it can earn on its debt and equity investments. During recessions, Gladstone will likely struggle as repayments may become a problem for its debt investments. Indeed, this caused the company to cut its dividend during the Great Recession, and it hasn't recovered.

Gladstone cut its distribution for this reason in Q2 2020, and we believe the cut should be enough for the foreseeable future. NII appears to have stabilized, and we see the payout as sustainable currently, particularly with strong recent earnings results supporting NII.

Final Thoughts & Recommendation

We forecast 5.3% total annual returns in the coming years. The stock remains elevated as the market is bidding up interest rate sensitive stocks. However, Gladstone's fundamentals don't appear to have improved materially. We see a headwind from the valuation, partially offsetting a very strong yield. The stock continues to earn a hold rating.
