Overview & Current Events

Morningstar was founded in 1984 as a way for investors to seek information about hundreds of popular mutual funds that was out of reach prior to the company's Sourcebook product. Since that time Morningstar has grown tremendously, serving about nine million clients. It produces ~\$1.7 billion in annual revenue and has a market capitalization of just under \$11 billion.

Morningstar reported second quarter earnings on July 27th, 2022, and results showed some weakness, particularly as it relates to margins. Revenue was up 13% year-over-year to \$470 million, while organic revenue was up 15.8%. The difference between organic revenue and reported was forex translation from the strong dollar.

License-based revenue was up 18% year-over-year, or up 20% on an organic basis. PitchBook, Morningstar Sustainalytics, Morningstar Data, and Morningstar Direct all contributed to growth during the quarter.

Operating expense was up 13% to \$417 million, but on an adjusted basis, operating expenses rose 22%.

Operating income was down 24% on an adjusted basis, which included an increase in stock-based compensation, which was largely related to outperformance of the PitchBook product. Transaction-based revenue was up 2.6% year-over-year, but was up 6% on an organic basis.

Adjusted net income was down 34% year-over-year to \$1.17. Free cash flow came to \$37 million, down from \$109 million a year ago.

The company posted share repurchases of 371,756 during the quarter, for \$92 million. We've reduced earnings-per-share to \$5.50 for this year following relatively weak Q2 results.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$2.10	\$2.66	\$2.54	\$3.00	\$3.72	\$2.88	\$4.25	\$3.52	\$5.40	\$6.36	\$5.50	\$9.69
DPS	\$0.53	\$0.38	\$0.70	\$0.79	\$0.88	\$0.92	\$1.00	\$1.12	\$1.20	\$1.44	\$1.44	\$2.12
Shares¹	46	45	44	43	43	43	43	43	43	43	43	43

Morningstar's earnings-per-share history is very strong considering the wide array of economic conditions that have existed in the past decade. The company saw a small dip in earnings at the height of the crisis in 2009 and there have been a couple of other small blips, but it has managed an average growth rate of more than 10% in the past decade. We see growth as continuing this pace going forward on the strength of PitchBook, in particular, and are therefore forecasting 12% earnings-per-share growth for the coming years.

We think high-single digit revenue growth and a bit of further margin growth potential make 12% earnings-per-share growth look feasible. This growth estimate is also dependent on the company's appetite for acquisitions moving forward. Its long-term revenue and earnings growth include many acquisitions over time, so we see this estimate as including some additional M&A that has not occurred yet. Morningstar's position in its niche is well established and we see its future as very bright looking forward. It also continues to experience tremendous success with its PitchBook and

other licensed products, and the significant costs related to recent mergers should not recur in future years, which will also help boost margins. Morningstar is also now buying back small amounts of its shares.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	28.7	27.7	28.2	25.8	21.4	28.1	27.2	40.2	29.8	41.1	45.3	33.0
Avg. Yld.	0.9%	0.5%	1.0%	1.0%	1.1%	1.1%	0.9%	0.8%	0.7%	0.5%	0.6%	0.7%

Morningstar's average price-to-earnings ratio has been very high in the past decade as its trough value was 21.4, set in 2016. Investors have always been willing to pay a premium for this stock and that is not going to change. Morningstar, and other businesses like it with lucrative subscription models, tend to receive premium valuations due to their high rates of recurring revenue and superior profitability. However, today's price-to-earnings ratio of 45.3 is still well in excess of our estimate of fair value, which we see as 33. The stock has declined since our last update, and in conjunction with lower earnings, the valuation has deteriorated. The security could experience a significant annual headwind to total returns as the valuation returns to more normalized levels. We see the yield remaining below 1% for the foreseeable future; Morningstar is not a high-income stock.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	25%	14%	27%	25%	24%	32%	24%	32%	22%	23%	26%	22%

Morningstar's payout ratio is not likely to be significantly above a quarter of earnings anytime soon, barring a major shift in capital allocation strategy, so we see the yield as staying quite low for the foreseeable future. Certainly, management has been more interested in investing for future growth, and that strategy isn't going to change anytime soon.

Morningstar's competitive advantage is in its very long operating history in a niche of the investment world it helped create. The company's subscription service, particularly with its PitchBook product, is a key differentiator and we see it powering future growth for many years to come. Morningstar was largely unaffected by COVID-19.

Final Thoughts & Recommendation

Overall, we see Morningstar as a stock with a strong moat but also one that is still overvalued, making it less compelling at present. We are forecasting 5.7% total annual returns moving forward, as growth and the small yield could be somewhat offset by the valuation, which we see as too high once again. We are reiterating the stock at a hold rating following Q2 results.
