Overview & Current Events

Sabine Royalty Trust (SBR) is an oil and gas trust set up in 1983 by Sabine Corporation. At initiation, the trust had an expected reserve life of 9 to 10 years; the current estimated life of the trust is 8 to 10 years. The trust consists of royalty and mineral interests in producing properties and proved oil and gas properties in Florida, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas. It is roughly 2/3 oil and 1/3 gas in terms of revenues. The trust's assets are static in that no further properties can be added. The trust has no operations but is merely a pass-through vehicle for royalties. SBR had royalty income of \$60.9 million in 2021 and has a current market cap of \$1.2 billion.

In mid-August, SBR reported (8/11/22) financial results for the second quarter of fiscal 2022. Oil Production edged up 2% over the prior year's quarter while production of gas grew 75%. In addition, the average realized prices of oil and gas grew 76% and 43%, respectively, thanks to the sanctions of western countries on Russia, which have led to a rally of oil and gas prices to 13-year highs. As a result, distributable cash flow per unit more than doubled, from \$0.78 to \$2.05. Moreover, the sanctions on Russia are not likely to be withdrawn anytime soon. As a result, SBR is likely to post 10-year high distributable cash flow per unit this year. Based on its distributions in the first eight months of the year, SBR is offering an annualized distribution yield of 9.8%.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
DCFU	\$3.59	\$4.03	\$4.03	\$3.15	\$1.88	\$2.38	\$3.42	\$3.02	\$2.28	\$3.97	\$7.80	\$3.67
DPU	\$3.70	\$3.92	\$4.10	\$3.11	\$1.93	\$2.37	\$3.35	\$3.02	\$2.40	\$3.22	\$7.80	\$3.67
Units¹	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6	14.6

The trust does not have earnings per se, but rather is a pass-through vehicle for royalty payments – essentially all the royalty income (cash) it receives is passed through to unit holders. About 5%-8% of royalty income is consumed in administrative expenses. The trust has generated an average annual distributable cash flow of \$3.18 per unit over the last decade. However, the cash flows of SBR are extremely sensitive to the gyrations of the prices of oil and gas and hence they have resulted in a markedly volatile performance record. Given the rally of the prices of oil and gas to 13-year highs this year, which have formed an exceptionally high comparison base, we expect a -14.0% average annual decline in distributable cash flow per unit over the next five years. Notably, it is the first time that oil producers are somewhat reluctant to invest in new growth projects due to the secular shift from fossil fuels to clean energy sources. As a result, some investors think that oil prices may remain excessive for years. However, we believe that the well-known cyclical nature of oil prices will remain the norm.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027

Sabine Royalty Trust (SBR)

Updated August 30th, 2022 by Aristofanis Papadatos

SBR has traded at an average price-to-distributable cash flow ratio of 12.9 over the last decade. However, this average multiple seems quite high given the risk of a royalty trust. It is critical to note that the trust has a limited lifetime and hence its returns will be greatly affected by the commodity prices that will prevail throughout this period. When the music begins to slow down on one of these trusts (i.e., the end of reserves comes into view) or the market gets the slightest hint that the music will slow, the price of a unit often plummets. As a result, investors should pay extra attention to the valuation of SBR before investing in it. We assume a fair DCFU multiple of 10.0 for SBR. If the stock trades at our fair value estimate in five years, it will incur a modest -0.5% annualized drag in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

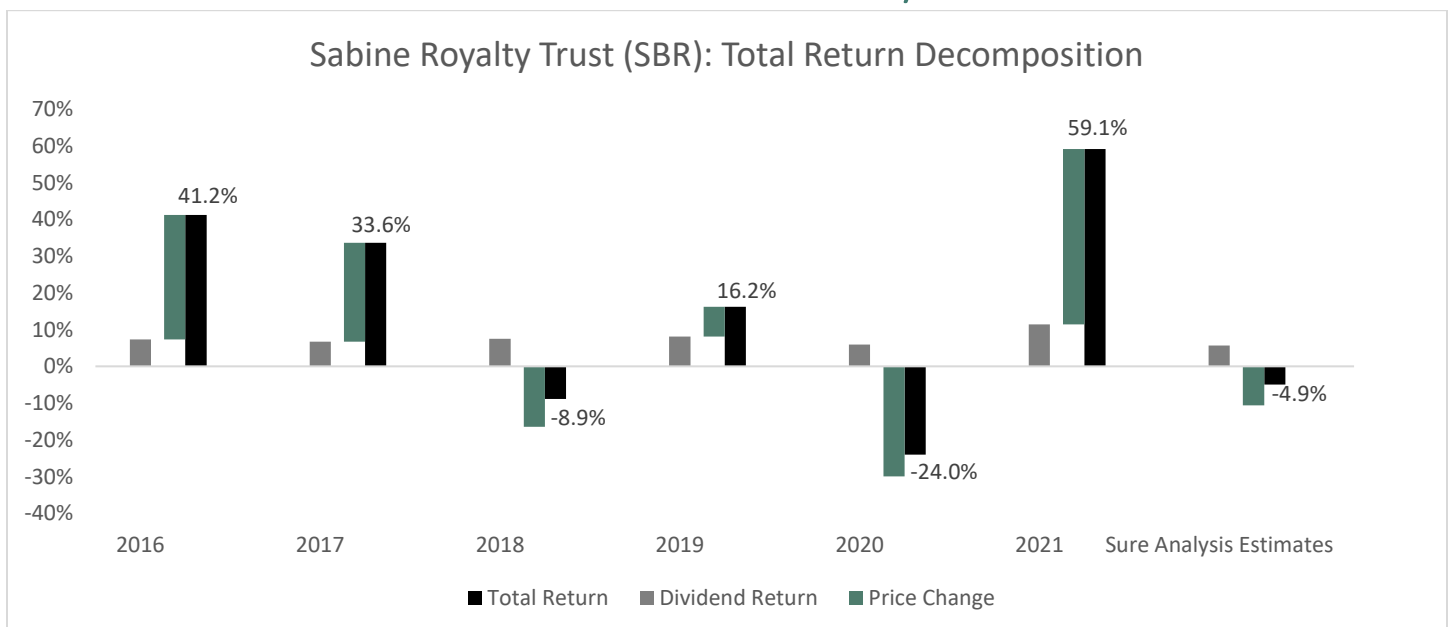

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	103%	97%	102%	99%	103%	100%	98%	100%	105%	81%	100%	100%

On the positive side, the trust has been in continuous existence for 39 years paying a 10-year average yield of 7.9%, albeit with considerable volatility in the distributions. Considering that the initial expected life was just 10 years, this longevity is certainly impressive. We also note that the proved developed reserves of oil and gas of SBR have grown 4% and 16%, respectively, since the end of 2017. For some investors, there may be tax advantages resulting from passed-through depletion allowances. However, it is critical to note the pronounced vulnerability of SBR to a downturn in the energy sector, partly due to its limited time horizon. If the energy market incurs a prolonged downturn, it will greatly hurt the returns of SBR. Overall, while the 9.8% distribution yield may entice some income-oriented investors, we believe that the trust is not suitable for most of them due to its huge downside risk in the event of a downturn.

Final Thoughts & Recommendation

SBR is thriving right now, mostly thanks to the conflict between Russia and Ukraine, which has sent the oil and gas prices to 13-year highs. We expect the strong momentum to remain in place this year but SBR is highly cyclical and hence it will have significant downside risk whenever the next downcycle of the energy market shows up. We expect the stock to offer a -4.9% average annual return over the next five years, as its 9.8% distribution may be offset by -14.0% decline of distribution and a -0.5% valuation headwind. We thus rate the stock as a sell.
