Overview & Current Events

Sempra Energy (SRE) was founded 21 years ago and has grown into a \$53 billion market cap company. It serves one of the largest utility customer bases in the U.S., as it distributes natural gas and electricity in Southern California (over 20 million customers) and owns a majority stake in Texas-based Oncor, a transmission and distribution business (over 10 million customers). The company also owns and operates other utilities and merchant renewable energy projects, liquefied natural gas facilities, and gas pipes and storage in the U.S. and Latin America.

Sempra Energy benefits from two key trends, namely the transition towards cleaner energy resources and the advance of the U.S. as a global energy leader. In 2018, the company sold most of its non-core assets in order to better focus on its large core North American regulated utility, LNG export, and Mexican infrastructure (IEnova) assets as well as deleverage the balance sheet. Given the strong competitive advantages enjoyed by these core assets, we believe that these moves have made Sempra Energy more attractive.

In early August, Sempra Energy reported (8/4/22) financial results for the second quarter of fiscal 2022. Adjusted earnings-per-share grew 21% over last year's quarter, from \$1.63 to \$1.98, and beat the analysts' estimates by \$0.21. The company has exceeded the analysts' estimates for seven consecutive quarters and its business outlook remains positive. Management now expects the annual earnings-per-share to be close to the upper limit of its previously issued guidance of \$8.10-\$8.70 in 2022 and reaffirmed its guidance for earnings-per-share of \$8.60-\$9.20 in 2023. Accordingly, we have raised our forecast for this year by 2%, from \$8.50 to \$8.65. As a utility, Sempra Energy is essentially immune to the pandemic.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$3.48	\$4.01	\$4.63	\$5.37	\$5.46	\$5.42	\$5.57	\$6.78	\$8.03	\$8.43	\$8.65	\$11.04
DPS	\$2.40	\$2.52	\$2.64	\$2.80	\$3.02	\$3.29	\$3.58	\$3.87	\$4.18	\$4.40	\$4.58	\$5.85
Shares²	247	249	251	251	251	252	270	289	290	320	330	400

Sempra's enormous economies of scale and regulated monopolies in California and Texas should enable it to capitalize on any economic growth in those regions to drive long term growth. Sempra Energy has a record 5-year capital plan of \$36 billion, which will be a major growth driver in the upcoming years. Oncor expects to grow its rate base to nearly \$28 billion by 2026, thus implying 8% average annual growth. Additionally, Sempra's assets in Mexico enjoy a first mover advantage, which should enable them to grow rapidly as Mexico begins to invest more seriously in its massively underdeveloped infrastructure. The LNG export portfolio should also see strong demand in the long run, as the U.S. continues its transition into a global energy exporting giant. The U.S. is expected to more than double its LNG export capacity by 2030. As a result, management has several expansion projects, which should contribute significantly to the company's cash flows. Overall, Sempra Energy expects to grow its earnings-per-share by 6%-8% per year on average until 2026. In order to be on the safe side, we have assumed 5% average annual growth over the next five years.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	20.7	22.3	24.1	17.3	18.5	19.8	19.4	19.8	16.1	15.4	19.4	18.8
Avg. Yld.	3.3%	2.8%	2.4%	3.0%	3.0%	3.1%	3.3%	2.9%	3.2%	3.4%	2.7%	2.8%

Sempra Energy is currently trading at a price-to-earnings ratio of 19.4, which is higher than its 10-year average of 18.8. We expect the stock to trade close to its average valuation level in five years. If this occurs, the stock will incur a modest -0.6% annualized contraction of its price-to-earnings ratio.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	69.0%	62.8%	57.0%	52.1%	55.3%	60.7%	64.3%	57.1%	52.1%	52.2%	52.9%	52.9%

As a regulated utility in possession of dominant businesses in their respective regions, Sempra Energy possesses a clear moat around a significant portion of its earnings. At the same time, however, the regulated nature of its pricing prevents it from earning surplus profits. These businesses, as well as the stable, mission-critical nature of its infrastructure business in Mexico make it quite recession resistant. As proof of this, Sempra's earnings-per-share increased during the Great Recession (2008 and 2009) and have increased in the coronavirus crisis as well. However, its LNG export business and international exposure make it somewhat susceptible to commodity price, geopolitical, and currency exchange risks. Nevertheless, its high-quality assets, low payout ratio, stable cash flows and strong growth prospects make it a fairly low-risk investment. Moreover, while the company has a somewhat weak balance sheet, it has improved its interest coverage ratio to 2.7 thanks to the sale of non-core assets.

Final Thoughts & Recommendation

Sempra Energy owns quality assets, many of which are in recession-resistant businesses. Its utilities businesses are dominant players in their fields and its LNG export and infrastructure businesses have strong growth potential. Combined, they create a business that has both stable and defensive characteristics. The stock has rallied 27% this year but could still offer a 6.9% average annual return over the next 5 years thanks to 5.0% growth and its 2.7% dividend, which may be partly offset by a -0.6% valuation headwind. The stock maintains its hold rating.
