Overview & Current Events

Walmart traces its roots back to 1945 when Sam Walton opened his first discount store. The company has since grown into the largest retailer in the world, serving more than 230 million customers each week. Revenue should be around \$595 billion this year and the stock trades with a market capitalization of \$361 billion. Walmart is one of the largest employers in the world, counting 2.3 million people in its ranks.

Walmart posted second quarter earnings on August 16th, 2022, and results were better than expected on both revenue and profits, and by wide margins. Adjusted earnings-per-share came to \$1.77, which was 17 cents better than expected. Revenue was up more than 8% from the year-ago period, rising to \$153 billion, and beating expectations by more than \$2.6 billion.

Comparable sales in the US grew 6.5% year-over-year, and were up 11.7% on a two-year stack basis. eCommerce growth continues to lead the way as that metric came in at +12% for this year's Q2, and +18% on a two-year stack basis.

Walmart also noted it continues to gain share in grocery sales.

Sam's Club comparable sales rose sharply, adding 9.5% year-over-year, and 17.2% on a two-year stack basis. Membership income was up 8.9% as the chain's member count hit another all-time high.

Walmart International sales were \$24.4 billion, up 5.7% year-over-year, including a \$1 billion impact from currency fluctuations. The company noted its three largest markets all saw double-digit comparable sales gains.

The company sees revenue growth at +4.5% for this year, or +5.5% on an adjusted basis. We now see \$5.85 in earnings-per-share following second quarter results.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$5.02	\$5.11	\$5.07	\$4.57	\$4.32	\$4.42	\$4.91	\$4.93	\$5.48	\$6.43	\$5.85	\$8.60
DPS	\$1.59	\$1.88	\$1.92	\$1.96	\$2.00	\$2.04	\$2.08	\$2.12	\$2.16	\$2.20	\$2.24	\$2.47
Shares¹	3,314	3,233	3,228	3,162	3,048	2,952	2,914	2,855	2,826	2,769	2,700	2,500

The largest concern for Walmart is operating margins, as gross margins have remained flat while operating expenses have risen in recent quarters. This is the product of Walmart's focus on building out its online business as well as integrating its acquisitions, both of which are expensive endeavors. We note that while operating margins did improve in the second half of 2020, given the pace of revenue growth, one would generally expect higher margins, but Walmart simply isn't delivering as it reinvests in pricing and digital channels, as well as dealing with labor cost inflation. Margins suffered again in Q4 of 2021, as the company grapples with rising supply chain and labor costs, both of which are being driven by constraints outside the company's control. While earnings will decline this year, we see outsized growth coming from continued strong comparable sales, and the margin gains that can drive.

Looking forward, we are forecasting 8% annual earnings growth for the next five years as Walmart continues to work through its margin issues. The company continues to buy back stock as well. We see low single-digit sales growth each

year, with its e-commerce business being the primary driver of top line growth. That combination should be good enough to create mid-single-digit growth without the benefit of margin expansion. We note that revenue growth was much better in 2020 and 2021 due to COVID-19, but that this performance should not be repeatable. Guidance on this year's revenue supports this. We continue to be bullish on Walmart's ability to grow revenue, but with a watchful eye on margins. Walmart has also thus far successfully lapped the tough periods of the pandemic in terms of comparable sales.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	13.5	14.9	15.4	15.5	16.2	18.9	18.8	22.3	24.1	21.9	22.6	21.0
Avg. Yld.	2.3%	2.5%	2.5%	2.8%	2.9%	2.1%	2.3%	1.9%	1.6%	1.6%	1.7%	1.4%

Walmart's valuation has deteriorated slightly since our last report as earnings estimates have fallen. We are forecasting the price-to-earnings multiple to decline from the current 22.6 to 21, implying a small headwind to total annual returns from the valuation. The yield is 1.7%, which is still below its historical range. Given small dividend increases in recent years, we've reduced our dividend growth forecast accordingly.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	33%	32%	37%	38%	43%	46%	42%	43%	39%	34%	38%	29%

The company's payout ratio is quite low at 38% of earnings, making for a conservative dividend policy. The dividend should be very safe, even if earnings decline meaningfully.

Walmart's competitive advantage is in its enormous size as it can buy and ship product at scales no other company can rival. This allows it to operate with low prices to consumers and as more than half of its revenue comes from groceries, its recession performance is excellent. The company managed to increase earnings steadily during and after the Great Recession. Hard economic conditions tend to send consumers on the margins to Walmart, which is also an advantage. We note that Walmart's strength during the COVID-19 crisis highlights its recession resistance.

Final Thoughts & Recommendation

Overall, Walmart looks poised to deliver good returns in the coming years. We are forecasting total five-year annual returns of 7.8%, as the yield remains low, and the valuation is now ahead of our fair value estimate. Walmart is a safe, defensive stock in times of economic hardship, and we see outsized growth in the years to come from what should be a trough earnings value this year.
