Overview & Current Events

New York Mortgage Trust is a real estate investment trust, or REIT, that acquires, invests in, finances, and manages mortgage-related assets and other financial assets. The trust doesn't own physical real estate, but rather seeks to manage a portfolio of investments that are real estate related. New York Mortgage Trust derives revenue from net interest income and net realized capital gains from its investment portfolio. The trust primarily seeks to generate interest income from mortgage-related assets, but it also owns some distressed financial assets where it seeks to capture capital gains. The trust invests in residential mortgage loans, multi-family CMBS, preferred equity, and joint venture equity. It has been publicly traded since 2004 and has a current market capitalization of \$1.2 billion.

New York Mortgage Trust released second quarter earnings on August 2nd, 2022, and results were worse than expected on both the top and bottom lines. Earnings came to a loss of 22 cents, which was far worse than the loss of one penny that was expected. In addition, revenue was \$26 million, down 17% year-over-year, and missed estimates by more than \$2 million. Portfolio net interest margin was 3.48%, and book value ended the quarter at \$4.06 per share.

The company noted that book value declined 4.7% during the quarter, which it labeled as a success given market conditions for mortgages. The company noted that buyers for long-dated mortgage securities remain "thin" and that buyers appear to be waiting out volatile interest rate conditions.

Management noted housing fundamentals appear to remain strong, and that it intends to take advantage of wider spreads in mortgage markets to generate profit. NYMT maintains its balance sheet is well positioned for rising rates, and management is bullish despite the inherently tough conditions present today for mortgage REITs.

During the quarter, the company purchased \$774 million residential loans, and \$60 million in single-family rental properties. Multi-family joint venture investments of \$57 million, and \$11 million of proceeds of redemptions of mezzanine lending rounded out capital actions taken during the quarter.

In addition, the company bought back 2.8 million common shares, plus another 0.9 million subsequent to the end of the quarter. We now expect New York Mortgage Trust to lose 16 cents per share this year. We'll use 30 cents per share in earnings power for fair value calculations.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$1.08	\$1.11	\$1.52	\$0.62	\$0.50	\$0.61	\$0.58	\$0.65	-\$0.89	\$0.37	-\$0.16	\$0.30
DPS	\$1.06	\$1.08	\$1.08	\$1.02	\$0.96	\$0.80	\$0.80	\$0.80	\$0.23	\$0.40	\$0.40	\$0.31
Shares¹	26	59	88	108	110	130	147	243	377	379	380	380

New York Mortgage Trust has struggled to grow consistently in the past, a trait owed to the very volatile nature of the markets it invests in. Prices and yields of mortgage-backed securities tend to move around a lot, and with rates around the world having plummeted to historical lows, the past few years have not been kind to mortgage REITs.

New York Mortgage Trust, Inc. (NYMT)

Updated August 16th, 2022, by Josh Arnold

We forecast no growth for New York Mortgage Trust in the coming years. Interest rates are sharply higher than they were a year ago. However, we see rates that remain at or near their historical lows as a long-term headwind for New York Mortgage Trust and its competitors. Rates are up recently, but still low by historical standards. We also note the trust's strategy of buying residential loans is somewhat unproven. In addition, the trust's strategy of sacrificing short-term earnings to lower its cost of capital supports this environment being tougher.

The trust is working to rebuild its payout after having briefly suspended it in 2020. We think the trust will struggle to grow EPS from normalized earnings power of 30 cents per share, meaning the dividend payment could remain stagnant for some time, or even be at risk.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	6.3	6.1	5.0	11.4	11.4	10.4	10.5	9.5	---	11.6	10.2	7.0
Avg. Yld.	15.6%	16.0%	14.1%	14.5%	16.8%	12.7%	13.2%	13.0%	7.0%	9.3%	13.1%	14.7%

The price investors have been willing to pay for this stock has moved around enormously in the past decade, ranging from 5 times earnings to nearly 16. Given the current environment, we assess fair value at 7 times earnings, which is below the current multiple of 10.2. That means we forecast a headwind from the valuation in the coming years, with the yield slated to rise as a result.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	98%	97%	71%	165%	192%	131%	138%	123%	---	108%	133%	103%

New York Mortgage Trust does not have competitive advantages as all mortgage REITs operate in largely the same way, and with the same sort of securities. It used to have some scale advantages, but with the sales that occurred early in 2020, that is no longer the case.

The balance sheet is in much better shape after the capital raises and asset sales that occurred in early 2020, but recession performance is generally poor for mortgage REITs as consumers and businesses default on their mortgages in higher numbers during economic downturns. The trust has increased its recession exposure with its strategy of buying individual loans rather than MBS.

Final Thoughts & Recommendation

New York Mortgage Trust, and indeed the mortgage REIT industry as a whole, are at an extremely tough point in the cycle. Volatility in earnings is likely to increase given the strategy shift, and the dividend remains stretched. New York Mortgage Trust continues to be a very volatile way to collect a dividend payment. With total return expectations of 4.5%, we continue to rate the stock a hold. The yield is above 13%, but the valuation is a 7.3% headwind, and we note the dividend could be at risk if market conditions deteriorate further.
